MBA(Integrated) 5th SEMESTER SYLLABUS

Subject: Introduction to Research Methodology

Code: BMBAI501 | Credits: 3 | Total Contact Hours: 40 | Type: CC

Course Objectives

1. Develop a comprehensive understanding of research methodology and its application in business and management studies.
2. Formulate research problems and design appropriate research methodologies aligned with research objectives.
3. Apply suitable techniques for data collection, measurement, sampling, and statistical analysis.
4. Interpret research findings using quantitative and qualitative analytical tools for business decision-making.
5. Prepare professional research reports following accepted academic and industry standards.

Course Contents

Module I: Foundations of Research and Scientific Inquiry (7 Hours)

Concept, meaning, nature, scope, and significance of research; objectives of research; types of research including basic, applied, exploratory, descriptive, diagnostic, and causal research; characteristics of good research; research process and stages of research; role of research in business decision-making.

Module II: Research Problem Formulation and Literature Review (9 Hours)

Identification and formulation of research problems; selection and justification of research topics; review of literature and related studies; identification of research gaps; formulation of research questions, research objectives, hypotheses, and conceptual framework; variables and operational definitions; ethical issues in business research including plagiarism, informed consent, confidentiality, and research integrity.

Module III: Research Design and Sampling Techniques (8 Hours)

Concept and importance of research design; fundamentals of experimental designs; preparation of research proposals; sampling concepts and sampling design; probability and non-probability sampling techniques.

Module IV: Measurement and Data Collection Methods (8 Hours)

Concepts of measurement and scaling; levels of measurement including nominal, ordinal, interval, and ratio scales; primary and secondary data sources; methods of data collection including questionnaires, schedules, interviews, observations, focus group discussions, and online surveys; questionnaire design principles.

Module V: Data Analysis, Interpretation and Research Reporting (8 Hours)

Data preparation including editing, coding, classification, and tabulation; descriptive statistics; hypothesis testing using parametric and non-parametric tests; data visualization through charts, graphs, tables, box plots, and dashboards; interpretation of research findings; structure and format of research reports; referencing styles and citation methods; executive summaries, conclusions, recommendations, and presentation of research results.

Suggested Readings (Latest Edition)

1. Sekaran, U., & Bougie, R. (2019). *Research methods for business: A skill-building approach* (8th ed.). John Wiley & Sons.
2. Malhotra, N. K., Nunan, D., & Birks, D. F. (2017). *Marketing research: An applied approach* (5th ed.). Pearson Education.

3. Kumar, R. (2019). *Research methodology: A step-by-step guide for beginners* (5th ed.). SAGE Publications Ltd.
4. Kothari, C. R., & Garg, G. (2019). *Research methodology: Methods and techniques* (4th ed.). New Age International Publishers.
5. Cooper, D. R., & Schindler, P. S. (2019). Business research methods (13th ed.). McGraw-Hill Education.

Course Outcomes (COs) with Bloom's K-Levels Mapping

CO No.	Course Outcome Statements	Bloom's K-Levels
CO1	Explain the meaning, types, process and ethical principles of business research and its role in managerial decision-making.	**Understand (K2)**
CO2	Formulate a research problem, review related literature and state research objectives, hypotheses and a conceptual framework.	**Apply (K3)**
CO3	Select and apply suitable research designs and probability and non-probability sampling techniques for given research situations.	**Apply (K3)**
CO4	Apply measurement and scaling concepts and prepare structured instruments such as questionnaires and interview schedules for data collection.	**Apply (K3)**
CO5	Apply descriptive statistics and basic hypothesis-testing procedures and prepare a research report using an accepted referencing style.	**Apply (K3)**

Subject: Logistics and Supply Chain Management

Code: BMBAI502 | Credits: 3 | Total Contact Hours: 40 | Type: CC

Course Objectives

1. Understand the strategic role of logistics and supply chain management in creating competitive advantage and business value.
2. Analyse and design efficient supply chain networks for traditional and e-commerce business models.
3. Evaluate sourcing and pricing strategies for improving supply chain performance and profitability.
4. Apply demand forecasting, aggregate planning, inventory management, and coordination techniques for effective supply chain management.
5. Examine the impact of digital technologies, sustainability initiatives, and global business challenges on supply chain operations.

Course Contents

Module I: Foundations of Logistics and Supply Chain Management (7 Hours)

Concept, evolution, scope, and objectives of supply chain management; logistics and supply chain integration; strategic role of supply chain management in organizational competitiveness; value creation through supply chain integration; digital transformation and emerging trends in supply chain management; latest trends and applications of analytics and artificial intelligence in supply chain management.

Module II: Supply Chain Drivers and Performance Management (9 Hours)

Supply chain drivers including facilities, inventory, transportation, information, sourcing, and pricing; supply chain performance metrics; efficiency versus responsiveness in supply chains; supply chain analytics; role of information sharing and visibility in supply chain success; Application of AI and predictive analytics for supply chain performance optimization.

Module III: Supply Chain Network Design and Risk Management (8 Hours)

Supply chain network design principles and decision-making; transportation and warehouse network planning; distribution strategies for traditional and e-business models; global supply chain network design; supply chain resilience and risk management; case studies.

Module IV: Sourcing and Pricing Strategies in Supply Chains (8 Hours)

Strategic sourcing decisions and supplier relationship management; procurement processes and supplier evaluation; outsourcing and insourcing strategies; ethical and sustainable sourcing practices; pricing objectives and pricing models; revenue management and dynamic pricing strategies; sourcing and pricing challenges in e-commerce and omnichannel retailing; case studies.

Module V: Demand Forecasting and Supply Chain Coordination (8 Hours)

Demand forecasting techniques and forecasting models; aggregate planning and capacity management; sales and operations planning; inventory planning and replenishment strategies; managing demand variability and the bullwhip effect; collaborative planning, forecasting, and replenishment; digital technologies and scope of sustainability in logistics and supply chain; case studies.

Suggested Readings (Latest Edition)

1. Russell, R. S., & Taylor, B. W. Operations and Supply Chain Management. Wiley.
2. Sunil Chopra & Peter Meindl, *Supply Chain Management: Strategy, Planning, and Operation*.
3. Martin Christopher, *Logistics & Supply Chain Management*.
4. David Simchi-Levi, Philip Kaminsky & Edith Simchi-Levi, *Designing and Managing the Supply Chain*.

5. Donald J. Bowersox, David J. Closs & M. Bixby Cooper, *Supply Chain Logistics Management*.

Course Outcomes (COs) with Bloom's K-Levels Mapping

CO No.	Course Outcome Statements	Bloom's K-Levels
CO1	Explain the concepts, components, drivers and strategic importance of logistics and supply chain management.	Understand (K2)
CO2	Describe supply chain drivers and performance metrics and interpret the trade-off between efficiency and responsiveness.	Understand (K2)
CO3	Apply network design and risk management concepts to distribution and warehousing decisions in traditional and e-business models.	Apply (K3)
CO4	Apply sourcing, supplier evaluation and pricing techniques to procurement and revenue management situations.	Apply (K3)
CO5	Apply demand forecasting, aggregate planning, inventory and coordination techniques to balance demand and supply.	Apply (K3)

Subject: Fundamentals of Consumer Behaviour

Code: BMBAI503 | Credits: 3 | Total Contact Hours: 40 | Type: CC

Course Objectives

1. Develop a comprehensive understanding of the concepts, theories, and models of consumer behaviour.
2. Analyse the influence of psychological, social, cultural, and personal factors on consumer purchase decisions.
3. Examine the consumer decision-making process and evaluate different models of buying behaviour.
4. Interpret online and organisational buying behaviour in the context of evolving market dynamics.
5. Apply consumer behaviour insights to formulate effective marketing strategies in the Indian context.

Course Contents

Module I: Introduction to Consumer Behaviour (7 Hours)

Concept, nature, scope, and importance of consumer behaviour; relationship between consumer behaviour and marketing; consumer value, consumerism and consumer rights; factors influencing consumer behaviour; emerging trends in consumer markets; ethical marketing practices; introduction to online consumer behaviour and digital consumer journey; overview of organisational buying behaviour.

Module II: External Influences on Consumer Behaviour (9 Hours)

Lifestyle analysis and psychographics; AIO (Activities, Interests, Opinions) framework; social class and consumption patterns; reference groups and group dynamics; family decision-making and family life cycle; role of opinion leaders and influencers; cultural values, subcultures, and cross-cultural influences; global and Indian consumer diversity.

Module III: Internal Psychological Influences (8 Hours)

Consumer perception and perceptual mapping; learning theories and memory systems; motivation theories and their marketing implications; personality and self-concept; consumer involvement; attitude formation and change; cognitive dissonance and its impact on post-purchase behaviour; implications for branding and communication strategies; case studies.

Module IV: Consumer Decision-Making Process (9 Hours)

Concept and stages of decision-making; need recognition, information search, evaluation of alternatives, purchase decision, and post-purchase behaviour; situational influences (physical, social, temporal, psychological); satisfaction, dissatisfaction, and loyalty formation; traditional and contemporary models of consumer decision-making; application of behavioural models in marketing strategy; case studies

Module V: Digital, Organisational and Strategic Consumer Behaviour (7 Hours)

Online consumer behaviour and digital decision journey; e-commerce buying behaviour; consumer analytics and behavioural data interpretation; application of consumer insights in segmentation, targeting, and positioning; development of customer-centric marketing strategies using behavioural insights; emerging trends in AI-driven consumer analytics.

Practical Activities

1. Design of a short AIO (Activities, Interests, Opinions) questionnaire and collect responses from peers and its analysis to identify different lifestyle segments to learn consumer segmentations using psychographic variables.
2. Evaluation of competing brands of e.g., smartphones, food delivery apps, or apparel on selected attributes to understand consumer perception and brand positioning strategies.

3. Documentation of own purchase process for a high-involvement product (laptop, smartphone, online course, etc.) and map each stage of the decision-making process to understand consumer decision-making models to actual buying behaviour.
4. Analyse online reviews, social media comments, or e-commerce product ratings to identify consumer preferences, satisfaction drivers, and behavioural trends to develop skills in interpreting digital consumer data for marketing decisions.

Suggested Readings (Latest Edition)

1. Evans, M., Jamal, A., & Foxall, G. *Consumer Behaviour*. John Wiley & Sons.
2. Schiffman, L. G., Kanuk, L. L., & Kumar, S. R. *Consumer Behaviour*. Pearson Education.
3. Loudon, D. L., & Della Bitta, A. J. *Consumer Behaviour: Concepts and Applications*. Tata McGraw-Hill.
4. Babin, B. J., Harris, E. G., & Mohan, *A. Consumer Behaviour: A South Asian Perspective*. Cengage Learning India.
5. Hawkins, D. I., Best, R. J., & Coney, K. A. *Consumer Behaviour: Building Marketing Strategy*. McGraw-Hill.
6. Solomon, M. R. *Consumer Behaviour: Buying, Having, and Being*. PHI Learning.
7. Nair, S. R. *Consumer Behaviour and Marketing Research*. Himalaya Publishing House.

Course Outcomes (COs) with Bloom's K-Levels Mapping

CO No.	Course Outcome Statements	Bloom's K-Levels
CO1	Explain the concepts, theories and models of consumer behaviour and their relevance to marketing decisions.	Understand (K2)
CO2	Describe the influence of cultural, social, reference-group and family factors on consumer choices in diverse markets.	Understand (K2)
CO3	Explain how perception, motivation, learning, personality and attitudes shape consumer responses.	Understand (K2)
CO4	Apply consumer decision-making models to interpret buying behaviour in traditional and digital marketplaces.	Apply (K3)
CO5	Apply consumer insights to marketing-mix decisions for organisational and digital buying situations in the Indian context.	Apply (K3)

Subject: Foundations of Analytics and Artificial Intelligence

Code: BMBAI504 | Credits: 3 | Total Contact Hours: 40 | Type: MDC

Course Objectives

1. Understand the fundamental concepts of Artificial Intelligence, Machine Learning, and Business Analytics.
2. Analyse the role of AI in improving managerial decision-making and business efficiency.
3. Apply basic data analytics techniques for interpreting business information.
4. Develop effective prompts for generative AI tools for managerial problem-solving.
5. Evaluate AI applications across key business functions and industries.

Course Contents

Module I: Foundations of Analytics and Artificial Intelligence (8 Hours)

Introduction to Artificial Intelligence: meaning, evolution, scope, and types of AI; AI vs traditional computing; overview of machine learning, deep learning, and data science; role of AI in business decision-making; introduction to business analytics (descriptive, diagnostic, predictive, prescriptive); data-driven decision-making; data lifecycle in organisations; ethical, legal, and managerial challenges of AI adoption.

Module II: Business Data Analytics for Managers (8 Hours)

Types of business data: structured and unstructured; introduction to data analytics tools for managers; types of charts for data visualisation; introduction to dashboards, and KPIs; Excel-based analytics fundamentals; correlation, trend analysis, and forecasting basics; interpretation of data for managerial decision-making.

Module III: Generative AI and Prompt Engineering (9 Hours)

Introduction to Generative AI and Large Language Models (LLMs); applications of AI tools in business; principles of prompt engineering; structure of effective prompts (role, context, instruction, format); iterative prompting techniques; use cases in marketing, HR, finance, and reporting; limitations including bias, hallucination, and data privacy risks.

Module IV: AI Applications in Business Functions (8 Hours)

AI in marketing (customer segmentation, recommendation systems, sentiment analysis); AI in finance (fraud detection, credit scoring, risk assessment); AI in HR (recruitment analytics, attrition prediction, engagement analysis); AI in operations and supply chain (demand forecasting, inventory optimisation, logistics automation); AI in customer relationship management (chatbots, personalisation); overview of Industry 4.0 and emerging trends in intelligent enterprises.

Module V: Strategic and Ethical Implications of AI (7 Hours)

AI in strategic management and digital transformation; competitive advantage through AI adoption; AI governance frameworks; ethical issues in AI (bias, fairness, transparency); data privacy and compliance; impact of AI on future of work; organisational readiness for AI transformation; responsible AI practices; emerging trends such as AI agents and autonomous decision systems.

Practical Activities

1. Use spreadsheet software to create charts and dashboards from given datasets and interpret the findings for managerial decision-making.
2. Develop prompts for marketing campaign creation, HR job description drafting, and financial summary generation, and compare outputs across different prompt styles.
3. Identify AI applications in a selected company across marketing, finance, HR, and operations, and prepare a brief analytical report.

4. Analyse a given business problem and propose suitable AI-based solutions (e.g., customer churn prediction, demand forecasting, recruitment challenges).

Suggested Readings (Latest Edition)

1. Kumar. *Business Analytics: The Science of Data-Driven Decision Making*. 2nd Edition. Wiley.
2. Russell, S., & Norvig, P. *Artificial Intelligence: A Modern Approach*. Pearson.
3. Allan. *AI in Business For Dummies*. Wiley.
4. Provost, F., & Fawcett, T. *Data Science for Business*. O'Reilly Media.
5. Marr, B. *Artificial Intelligence in Practice*. Wiley.
6. Davenport, T. H., & Ronanki, R. *Artificial Intelligence for the Real World*. Harvard Business Review Press.
7. Goodfellow, I., Bengio, Y., & Courville, A. *Deep Learning*. MIT Press.
8. Chaffey, D. *Digital Business and E-Commerce Management*. Pearson (for AI-business integration context).

Course Outcomes (COs) with Bloom's K-Levels Mapping

CO No.	Course Outcome Statements	Bloom's K-Level
CO1	Explain the fundamental concepts of Artificial Intelligence, Machine Learning and Business Analytics in a managerial context.	**Understand (K2)**
CO2	Apply basic analytics techniques such as charts, dashboards, correlation and trend analysis to business data.	**Apply (K3)**
CO3	Apply generative AI tools and prompt-engineering techniques to routine managerial tasks.	**Apply (K3)**
CO4	Describe applications of AI across the marketing, finance, human resource and operations functions.	**Understand (K2)**
CO5	Explain the strategic, ethical and governance implications of AI adoption in enterprises.	**Understand (K2)**

Subject: Mini Project

Code: BMBAI551 | Credits: 3 | Type: IPR

Course Objectives

1. To provide practical exposure to real-world business and management problems.
2. To develop the ability to apply management theories, concepts, and analytical tools in solving organizational issues.
3. To enhance research aptitude, critical thinking, and problem-solving skills through systematic investigation.
4. To strengthen professional competencies in project planning, report writing, presentation, and teamwork.
5. To encourage ethical practices and informed decision-making in business research and managerial applications.

Course Description

The Mini Project provides students with an opportunity to apply the knowledge and skills acquired during the programme to a contemporary business or management problem. Students shall undertake an individual or group project under the guidance of a departmental faculty supervisor. The project may involve field studies, case analysis, industry-based studies, market surveys, data analysis, or other relevant research activities. It may be entrepreneurship, startup or social venture proposal also. Students are required to submit a mini project report in approximately 75 pages and present their findings through a viva-voce. The course aims to enhance analytical, research, communication, and professional skills while fostering experiential learning. The evaluation will consist of (1) Evaluation of Mini Project Report (2) Viva Voce which will be done by two examiners: external & internal. The average of the marks awarded by the 2 examiners will be taken into account for the results. In case the difference in the marks given by the examiners is 30 or more, the project report will be referred to a third examiner. In such cases the average of two closer awards (given by three examiners) will be taken into account for the results.

Course Outcomes (COs) with Bloom's K-Levels Mapping

CO No.	Course Outcome Statements	Bloom's K-Levels
CO1	Identify and state a contemporary business or management problem with clear objectives and scope.	Understand (K2)
CO2	Apply appropriate management concepts, research methods and analytical tools to the selected problem.	Apply (K3)
CO3	Apply suitable analytical techniques to the collected data and interpret the results in managerial terms.	Apply (K3)
CO4	Use evidence and professional ethics to justify feasible recommendations for the identified problem.	Apply (K3)
CO5	Prepare and present a structured project report using accepted documentation and referencing practices.	Apply (K3)

Subject: Analytics and AI Lab–1

Code: BMBAI552 | Credit: 1 | Total Contact Hours: 30 | Type: SEC

Course Contents

1. Explore Generative AI tools for business applications and prepare a report on their use in marketing, finance, HR, operations, and customer service.
2. Create charts and dashboards using Excel from business datasets and interpret key performance indicators for managerial decision-making.
3. Perform descriptive analytics using Excel by analysing sales, customer, or financial datasets and preparing summary reports.
4. Conduct correlation and trend analysis in Excel to identify relationships and patterns in business data.
5. Design and evaluate prompts for Generative AI tools for content creation, report writing, and business communication.
6. Generate marketing content using Generative AI tools, including product descriptions, promotional messages, and social media posts.
7. Prepare HR documents using Generative AI tools, such as job descriptions, interview questions, and employee communication materials.
8. Generate business and financial summaries using Generative AI tools and evaluate the quality and relevance of the outputs.
9. Analyse customer reviews using Generative AI tools and identify customer sentiments, concerns, and improvement opportunities.
10. Analyse business problems such as customer churn, declining sales, inventory issues, or recruitment challenges and propose AI-enabled solutions.
11. Evaluate AI-generated outputs for bias, fairness, transparency, hallucinations, and privacy concerns using practical examples.
12. Introduction to Business Analytics Using R – Install R and RStudio, import a simple business dataset, and generate basic statistical summaries and visualisations.
13. Data Visualisation in R – Create bar charts, pie charts, and line graphs using a business dataset and interpret the managerial insights obtained from the visualisations.
14. Introduction to Business Analytics Using Python – Set up the Python environment, import a business dataset using Pandas, and generate basic descriptive statistics.
15. Data Visualisation in Python – Create bar charts, histograms, and line charts using Matplotlib and interpret business trends and patterns from the visual outputs.

Course Outcomes (COs) with Bloom's K-Levels Mapping

CO No.	Course Outcome Statements	Bloom's K-Levels
CO1	Explain the fundamental concepts of artificial intelligence, machine learning, data science and business analytics in an organisational context.	Understand (K2)
CO2	Apply descriptive, diagnostic, predictive and prescriptive analytics techniques to business datasets using standard tools.	Apply (K3)
CO3	Use visualisation techniques, dashboards, KPIs and forecasting methods to present business data.	Apply (K3)
CO4	Apply prompt-engineering techniques with generative AI tools to marketing, finance, human resource and reporting tasks.	Apply (K3)
CO5	Describe applications of AI across business functions and their contribution to digital transformation.	Understand (K2)
CO6	Explain the ethical, legal and governance issues associated with AI adoption and responsible AI practices.	Understand (K2)

MBA(Integrated) 6th SEMESTER SYLLABUS

Subject: Business Policy and Strategy

Code: BMBAI601| Credits: 3 | Total Contact Hours: 40| Type: CC

Course Objectives

1. Understand the nature, scope, and importance of business policy and strategic management.
2. Analyse internal and external business environments using strategic tools.
3. Formulate business, corporate, and functional strategies for competitive advantage.
4. Evaluate strategy implementation and control mechanisms.
5. Apply strategic thinking to real-world business problems and dynamic environments.

Course Contents

Module I: Foundations of Business Policy and Strategy (7 Hours)

Concept and evolution of business policy and strategic management; strategic intent (vision, mission, objectives, goals); levels of strategy; strategic decision-making; competitive advantage; strategic management process; role of leadership in strategy; corporate governance, ethics, and social responsibility.

Module II: Strategic Analysis of Business Environment (9 Hours)

Environmental scanning; PESTLE analysis; Porter's Five Forces; competitor analysis; internal analysis of resources and capabilities; value chain analysis; SWOT analysis; benchmarking; strategic factors influencing business decisions; case studies.

Module III: Strategy Formulation and Strategic Choices (8 Hours)

Business-level strategies: cost leadership, differentiation, focus; corporate strategies: growth, diversification, integration, mergers and acquisitions; Blue Ocean Strategy; innovation and entrepreneurship in strategy.

Module IV: Strategy Implementation and Control (9 Hours)

Strategy implementation process; organisational structure and culture; resource allocation; functional strategies integration; change management; Balanced Scorecard; KPI systems; strategic control and evaluation; risk management in strategy execution.

Module V: Contemporary Issues in Strategy (7 Hours)

Digital transformation in strategy; AI and analytics in decision-making; ESG and sustainability strategies; platform business models; global disruptions; crisis management; case studies.

Suggested Readings (Latest Edition)

6. Porter, M. E. *Competitive Advantage*, Free Press
7. Ghemawat, P. *Strategy and the Business Landscape*, Pearson

Course Outcomes (COs) with Bloom's Taxonomy Mapping

CO No.	Course Outcome Statements	Bloom's K-Levels
CO1	Explain the concepts, levels and process of business policy and strategic management.	Understand (K2)

CO2	Apply strategic analysis tools such as SWOT, PESTEL, Five Forces and value chain analysis to the internal and external environment.	Apply (K3)
CO3	Apply business, corporate and growth strategy frameworks to identify strategic options for a firm.	Apply (K3)
CO4	Explain the requirements of strategy implementation, organisational structure, leadership and strategic control.	Understand (K2)
CO5	Apply strategic concepts to contemporary business situations and case studies.	Apply (K3)

Subject : Social Entrepreneurship and Venture Capital

Code: BMBAI602 | Credits: 3 | Total Contact Hours: 40 |Type: CC

Course Objectives

1. To understand the concepts, principles, and ecosystem of social entrepreneurship and social enterprises.
2. To identify and evaluate opportunities for developing sustainable and socially responsible business ventures.
3. To understand various sources of entrepreneurial finance, including venture capital, angel investment, crowdfunding, and government support.
4. To develop knowledge of venture creation, scaling, governance, and impact assessment of social enterprises.
5. To analyse the role of social entrepreneurship and venture capital in achieving sustainable development and inclusive economic growth.

Course Contents

Module I: Introduction to Social Entrepreneurship (8 Hours)

Concept, nature, scope, and importance of social entrepreneurship; evolution of social entrepreneurship; characteristics and competencies of social entrepreneurs; difference between entrepreneurship, social entrepreneurship, social business, NGOs, CSR, and social enterprises; Sustainable Development Goals (SDGs); role of social entrepreneurship in inclusive growth and nation building; social entrepreneurship ecosystem in India.

Module II: Social Venture Creation and Business Models (8 Hours)

Identification of social opportunities; problem identification and need assessment; social innovation and design thinking; ideation and opportunity recognition; business models for social enterprises; Business Model Canvas; legal forms of social enterprises in India; incubation, mentoring, startup ecosystem, and government initiatives.

Module III: Venture Capital and Entrepreneurial Finance (8 Hours)

Concept, objectives, and significance of venture capital; venture capital industry in India; angel investors, venture capital funds, private equity, crowdfunding, impact investing, seed funding, and accelerator programmes; stages of venture financing; startup valuation basics; due diligence; term sheets; investment agreements; exit strategies; role of SIDBI, NABARD, and government financial institutions in startup financing**.**

Module IV: Growth, Governance, and Impact Measurement (8 Hours)

Growth strategies for social enterprises; scaling social ventures; strategic alliances and partnerships; governance of social enterprises; stakeholder management; social impact assessment; Social Return on Investment (SROI); risk management; sustainability reporting; challenges in managing social enterprises.

Module V: Emerging Trends and Case Studies (8 Hours)

Digital transformation in social enterprises; Artificial Intelligence and technology-enabled social innovation; FinTech for financial inclusion; circular economy; green entrepreneurship; women entrepreneurship; rural and agripreneurship; impact investing trends; case studies of successful Indian social enterprises and venture-funded startups (SEWA, SELCO India, Aravind Eye Care, Amul, Jaipur Rugs, Lijjat Papad, Digital Green, Rang De).

Activities

1. Brainstorming to identify a local social problem and develop a viable social venture proposal.
2. Evaluate the social impact of a selected social enterprise using suitable indicators.

3. Analysing the funding pattern of an Indian startup supported by venture capital.
4. Prepare a Business Model Canvas for a social enterprise and present a pitch deck for a social enterprise seeking venture capital funding**.**

Course Outcomes (COs) with Bloom's Taxonomy Mapping

CO No.	Course Outcome Statements	Bloom's K-Level
CO1	Explain the concepts, ecosystem and significance of social entrepreneurship and venture capital in sustainable development.	Understand (K2)
CO2	Apply opportunity identification and business model tools to develop a social venture proposition.	Apply (K3)
CO3	Describe the sources of entrepreneurial finance, venture capital mechanisms and stages of start-up funding.	Understand (K2)
CO4	Apply governance, growth and social impact measurement frameworks to social enterprises.	Apply (K3)
CO5	Apply entrepreneurial, financial and sustainability principles to cases of socially innovative ventures.	Apply (K3)

Subject: Corporate Governance & Ethics

Code: BMBAI603 | Credits: 3 | Total Contact Hours: 40|Type: CC

Course Objectives

1. Understand the principles, concepts, and importance of corporate governance and business ethics.
2. Analyse governance structures, board systems, and stakeholder roles in organisations.
3. Evaluate ethical decision-making frameworks in business contexts.
4. Examine major corporate failures and their governance implications.
5. Apply ethical and governance principles in managerial decision-making.

Course Contents

Module I: Introduction to Corporate Governance and Ethics (8 Hours)

Meaning and evolution of corporate governance; objectives and significance; principles of good governance: transparency, accountability, fairness, and responsibility; relationship between ethics and governance; introduction to business ethics; ethical decision-making process; theories of corporate governance: Agency Theory, Stakeholder Theory, Stewardship Theory.

Module II: Board Structure and Stakeholder Management (7 Hours)

Composition and role of the Board of Directors; executive, non-executive, and independent directors; board committees and their functions; stakeholder identification and engagement; shareholder rights and activism; whistleblowing mechanisms; conflicts of interest and governance challenges.

Module III: Global Corporate Governance Frameworks (8 Hours)

Overview of global governance standards; Cadbury Committee Report (1992); OECD Principles of Corporate Governance; Sarbanes-Oxley Act (SOX, 2002); international best practices in corporate governance; role of ethics in preventing corporate fraud; comparative governance systems across countries.

Module IV: Corporate Governance in India (8 Hours)

Evolution of corporate governance in India; Companies Act, 2013; SEBI (LODR) Regulations, 2015; Overview of key committee reports: Kumar Mangalam Birla Committee, Narayana Murthy Committee, and Uday Kotak Committee; role of SEBI as regulator.

Module V: Corporate Failures and Ethical Issues (9 Hours)

Analysis of major corporate scandals: Satyam Scam, Kingfisher Airlines crisis, Punjab National Bank fraud, IL&FS crisis; governance breakdowns and ethical lapses; lessons from corporate collapses; strengthening governance through ethical leadership and compliance systems.

Course Outcomes (COs) with Bloom's Taxonomy Mapping

CO No.	Course Outcome Statements	Bloom's K- Level

CO1	Explain the concepts, principles and significance of corporate governance and business ethics.	Understand (K2)
CO2	Describe board structures, committees and the roles of different stakeholders in corporate governance.	Understand (K2)
CO3	Apply ethical frameworks and decision-making models to business situations.	Apply (K3)
CO4	Explain major Indian and global governance frameworks including SEBI (LODR) Regulations and OECD Principles.	Understand (K2)
CO5	Apply governance and ethical principles to corporate failure cases and identify governance gaps.	Apply (K3)

Subject: Business Taxations

Code: BMBAI604 | Credits: 3 | Total Contact Hours: 40|Type: MDC

Course Objectives

1. Understand the constitutional and legal framework governing GST and Customs Duty in India.
2. Examine the tax implications of GST and Customs Duty on various business transactions.
3. Calculate GST liabilities, input tax credits, and Customs Duty obligations accurately.
4. Apply GST provisions and customs regulations in business compliance and decision-making.
5. Evaluate recent developments and amendments in indirect taxation for effective business planning.

Course Contents

Module I: Introduction to GST Framework (7 Hours)

Concept and evolution of GST; indirect tax structure in India; objectives and features of GST; One Nation One Tax concept; GST Council and GSTN; structure of GST (CGST, SGST, UTGST, IGST); GST rates and classification; GST registration process including compulsory registration, exemption, cancellation, and GSTIN; overview of advantages and limitations of GST system.

Module II: Levy, Supply and Input Tax Credit (9 Hours)

Levy and collection of GST; persons/entities liable to pay tax; composition scheme; input tax credit (ITC); eligibility, conditions, ineligible credits, and reversal; Input Service Distributor (ISD); tax invoices and related documents-credit note, debit note, bill of supply, receipt voucher; payment mechanisms through electronic cash, credit, and liability ledgers.

Module III: GST Returns, Audit and Digital Applications (8 Hours)

Overview of GST returns; filing procedures and compliance timelines; audit under GST; departmental audit procedures and assessment mechanisms; demand and recovery provisions; overview of GST accounting software; GST ledger creation, tax entries, return generation, and online GST portal operations.

Module IV: Customs Duty Framework (8 Hours)

Introduction to customs law; types of customs duties—basic, countervailing, safeguard, anti-dumping, and protective duties; valuation principles of imported and exported goods; import and export procedures; warehousing provisions; baggage rules and exemptions; duty drawback system; customs compliance provisions for concessional imports.

Module V: Integrated Tax Planning and Contemporary Issues (8 Hours)

GST and customs impact on business decision-making; tax planning strategies under indirect taxation; GST compliance challenges in real business environments; role of digital taxation tools and automation; recent amendments and policy updates in GST and customs law; e-invoicing and emerging compliance technologies; overview of dispute resolution mechanisms and tax governance practices.

Practical Activities

1. Exploration of the GST portal interface through a guided demonstration, including login procedures, return selection, ledger verification, and return filing workflow.
2. Classification of products and services under appropriate GST slabs from the given list and determining the applicable tax components like CGST, SGST, IGST, or UTGST for intra-state and inter-state transactions using sample invoices.

Course Outcomes (COs) with Bloom's K-Levels Mapping

CO No.	Course Outcome Statements	Bloom's K-Levels
CO1	Explain the constitutional, legal and institutional framework governing GST and customs duty in India.	Understand (K2)
CO2	Describe the provisions relating to levy, supply, valuation and input tax credit under GST.	Understand (K2)
CO3	Compute GST liability, input tax credit, refunds and customs duty for given business transactions.	Apply (K3)
CO4	Prepare GST returns and use digital tools and accounting software for indirect tax compliance.	Apply (K3)
CO5	Apply indirect tax planning concepts to routine business decisions and contemporary tax issues.	Apply (K3)

Subject: Dissertation

Code: BMBAI651 | Credits: 3 | Type: IPR

Course Objectives

1. To develop the ability to undertake independent research on a contemporary business or management issue.
2. To apply appropriate research methodologies, analytical tools, and techniques for systematic investigation.
3. To enhance critical thinking, problem-solving, and decision-making skills through research.
4. To develop competence in data collection, analysis, interpretation, and report writing.
5. To strengthen professional and ethical research practices and effectively communicate research findings.

Course Description

The dissertation provides students with an opportunity to undertake an independent and in-depth research study on a contemporary business or management problem under the guidance of a faculty supervisor. The study involves identifying a research problem, reviewing relevant literature, designing an appropriate research methodology, collecting and analysing data, interpreting findings, and proposing practical recommendations. Students are required to prepare a dissertation report of approximately 75 pages under the supervision of departmental faculty and defend their work through a viva-voce. The course aims to strengthen research competence, analytical ability, ethical practices, and professional communication skills. The evaluation will consist of (1) Evaluation of Dissertation Report (2) Viva Voce which will be done by two examiners: external & internal. The average of the marks awarded by the 2 examiners will be taken into account for the results. In case the difference in the marks given by the examiners is 30 or more, the project report will be referred to a third examiner. In such cases the average of two closer awards (given by three examiners) will be taken into account for the results.

Course Outcomes (COs) with Bloom's K-Levels Mapping

CO No.	Course Outcome Statements	Bloom's K-Levels
CO1	Identify and state a research problem supported by a review of relevant literature and defined objectives.	**Understand (K2)**
CO2	Apply a suitable research methodology, data collection technique and analytical tool to conduct the study.	**Apply (K3)**
CO3	Apply appropriate analytical techniques to the data and interpret the findings with managerial implications.	**Apply (K3)**
CO4	Use research evidence and ethical research practice to arrive at conclusions and recommendations.	**Apply (K3)**
CO5	Prepare and defend a structured dissertation using accepted academic writing and referencing conventions.	**Apply (K3)**

Subject: Analytics and AI Lab–2

Code: BMBAI652 | Credit: 1 | Total Contact Hours: 30 | Type: SEC

Course Contents

1. Clean and preprocess a business dataset by handling missing values, duplicates, and outliers using Excel.
2. Create bar charts, line charts, pie charts, and scatter plots using Excel and interpret business insights from the visualisations.
3. Generate histograms and box plots to analyse data distribution and identify patterns in business datasets.
4. Design an interactive dashboard with KPIs, filters, and slicers using Excel for business performance monitoring.
5. Develop a data story using visualisations and business insights and present recommendations for managerial decision-making.
6. Create basic business visualisations in R using sales, customer, or financial datasets and interpret the findings.
7. Create data visualisations in Python using Matplotlib or Seaborn and analyse trends and relationships in business data.
8. Analyse social media performance metrics such as reach, impressions, engagement rate, and conversions using sample datasets.
9. Prepare a social media analytics report and recommend strategies to improve audience engagement and campaign effectiveness.
10. Perform sentiment analysis on customer reviews using AI tools and classify feedback into positive, negative, and neutral categories.
11. Evaluate digital marketing campaign performance by calculating CTR, CPC, CPA, and conversion rates from campaign data.
12. Analyse website traffic reports and interpret key web analytics metrics such as page views, sessions, bounce rate, and conversion rate.
13. Perform exploratory data analysis (EDA) on business datasets using Excel, R, or Python to identify trends, patterns, and correlations.
14. Conduct correlation, regression, and forecasting analysis on business data and interpret predictive insights for decision-making.
15. Develop a mini-project on predictive analytics by analysing a business problem, creating visualisations, generating forecasts, and presenting managerial recommendations through a report and presentation.

Suggested Readings(Latest Edition)

Course Outcomes (COs) with Bloom's K-Levels Mapping

CO No.	Course Outcome Statements	Bloom's K-Level
CO1	Apply data cleaning, preprocessing and visualisation techniques to prepare business data for analysis.	**Apply (K3)**
CO2	Prepare charts, dashboards, KPI reports and data stories to communicate business insights.	**Apply (K3)**
CO3	Use analytical tools to examine social media, web and business datasets for trends and campaign performance.	**Apply (K3)**
CO4	Apply exploratory, statistical and predictive analytics techniques to generate business forecasts.	**Apply (K3)**
CO5	Interpret the outputs of predictive models and analytics-driven solutions for managerial decision-making.	**Understand (K2)**

SPECIALISATION GROUPS AND DSE (5th & 6th SEMESTERS)

SPECIALISATION GROUP– MARKETING

Subject: Digital Marketing

Code: MK01 | Credits: 3 | Total Contact Hours: 40| Type: DSE

Course Objectives

1. To understand the foundations and evolution of digital marketing ecosystems.
2. To analyse digital consumer behaviour and decision-making journeys.
3. To develop digital marketing strategies aligned with business objectives.
4. To design and execute integrated digital marketing campaigns across channels.
5. To evaluate the role of emerging technologies and ethics in digital marketing.

Course Contents

Module I: Foundations of Digital Marketing (7 Hours)

Evolution of digital marketing; comparison with traditional marketing; digital ecosystems and business models; digital consumer behaviour overview; online consumer journey mapping; POEM framework (Paid, Owned, Earned Media); role of digital channels in marketing ecosystems.

Module II: Digital Consumer Behaviour and Strategy Development (9 Hours)

Digital consumer behaviour models; segmentation, targeting and positioning in digital markets; environmental scanning; digital readiness assessment; KPI formulation; development of digital marketing strategy aligned with business goals; case studies.

Module III: Digital Marketing Channels and Campaign Execution (8 Hours)

SEO, SEM, social media marketing, display advertising; content marketing; website planning and optimisation; platform marketing (Meta, LinkedIn, etc.); campaign design and execution; introduction to web analytics.

Module IV: Digital Technologies, Analytics and Ethics (8 Hours)

AI in marketing; AR/VR applications; marketing automation tools; mobile marketing and payment systems; data analytics in marketing decisions; ethical issues including data privacy, consumer protection, and responsible marketing.

Module V: Integrated Digital Marketing Applications and Emerging Trends (8 Hours)

Integrated digital campaigns; omnichannel strategies; influencer and affiliate marketing; e-commerce marketing; ROI measurement; emerging trends like AI personalisation, voice search, predictive analytics; future of digital marketing; case studies.

Practical Activities

1. Selection of some brands and map the digital consumer journey from awareness to purchase and post-purchase engagement to identify the role of Paid, Owned, and Earned Media at each stage.
2. Basic SEO audit of a website using free tools like Google Search and Google PageSpeed Insights, SEO extensions. They analyse keywords, metadata, page speed, mobile responsiveness, and content quality.
3. Creation on one-month digital marketing campaign for a product or service, including campaign objectives, target audience, social media posts, hashtags, content calendar, and performance KPIs to learn campaign planning, content marketing, and social media strategy execution.
4. Social media marketing campaign management and its analytics to gain practical exposure to campaign creation, audience targeting, performance monitoring, and reporting.

Course Outcomes (COs) with Bloom's K-Levels Mapping

CO No.	Course Outcome Statements	Bloom's K-Levels
CO1	Explain the evolution, structure and principles of digital marketing.	Understand (K2)
CO2	Describe digital consumer behaviour and the stages of the online customer journey.	Understand (K2)
CO3	Apply SEO, SEM, email and social media tools to execute digital marketing campaigns.	Apply (K3)
CO4	Use digital analytics tools to measure campaign performance and interpret key metrics.	Apply (K3)
CO5	Apply integrated digital marketing concepts to contemporary business situations and emerging platforms.	Apply (K3)

Subject: Marketing of Services

Code: MK02 | Credits: 3 | Total Contact Hours: 40| Type: DSE

Course Objectives

1. To understand the fundamental concepts, characteristics, and scope of services marketing and its distinction from goods marketing.
2. To analyse the role of service quality, customer expectations, and perception in delivering superior service experiences.
3. To examine service product design, delivery systems, pricing strategies, and demand management in service organisations.
4. To apply communication, branding, and physical evidence strategies to enhance service positioning and customer satisfaction.
5. To evaluate service recovery, relationship marketing, and customer loyalty strategies for long-term business success.

Course Contents

Module I: Foundations of Services Marketing & Service Consumers (7 Hours)

Meaning and characteristics of services; difference between goods and services marketing; challenges of services marketing; services marketing myopia; expanded services marketing mix (7Ps); levels of service expectations; factors influencing consumer perception of service; case studies.

Module II: Service Quality Management and Measurement (9 Hours)

Types of service quality; determinants of service quality; Gap Model of Service Quality; service quality gaps in delivery; SERVQUAL model and measurement of service quality; service quality research approaches; strategies for improving service quality; customer satisfaction and perceived service value; case studies.

Module III: Service Product, Delivery Systems and Pricing (8 Hours)

Customer participation in service creation; strategies to enhance customer involvement; managing service demand fluctuations; service delivery systems and intermediaries; service pricing strategies; cost-based, value-based and competition-based pricing; revenue management; price bundling, captive pricing, two-part pricing, loss leader pricing; case studies.

Module IV: Service Communication, Branding and Physical Evidence (9 Hours)

Challenges in service communication; managing service promises and delivery gaps; integrated service communication strategies; role of advertising and promotion in services; service branding concepts; servicescape and environmental dimensions; impact of physical evidence on customer experience; design of service environment; case studies.

Module V: Service Recovery, People Management and Relationship Marketing (7 Hours)

Service failures and causes; service recovery strategies and tactics; customer feedback systems; complaint handling mechanisms; internal marketing and employee empowerment; role of employees in service delivery; managing moments of truth; customer loyalty and retention; Customer Lifetime Value (CLV); case studies.

Practical Activities

1. Selection of a service like banking, hospital, restaurant, airline, OTT platform, etc. and mapping the complete customer journey from pre-service expectations to post-service evaluation to identify touchpoints, perceived service quality, and possible service gaps using the Gap Model.

2. Design of a short SERVQUAL questionnaire with reliability, responsiveness, assurance, empathy, tangibles to collect responses from peers to analyse the gap between expected and perceived service quality.
3. Creation of a service blueprint for a selected service like hotel check-in, online food delivery, hospital appointment system etc and simulating a service failure scenario. Then perform a role-play demonstrating service recovery strategies, complaint handling, and customer retention techniques to understand service process design, physical evidence, employee roles, and effective service recovery mechanisms.

CO3	Apply service product design, pricing and service delivery concepts to service business situations.	Apply (K3)
CO4	Apply service communication, branding and physical evidence concepts to enhance customer experience.	Apply (K3)
CO5	Apply service recovery and relationship marketing techniques to build customer loyalty.	Apply (K3)

Subject: Industrial Marketing

Code: MK03 | Credits: 3 | Total Contact Hours: 40| Type: DSE

Course Objectives

1. To understand the fundamental concepts, scope, and nature of industrial marketing and its distinction from consumer marketing.
2. To analyse industrial buying behaviour and organisational procurement systems.
3. To examine industrial marketing mix elements including pricing, distribution, logistics, and sales force management.
4. To apply strategic planning concepts for industrial marketing decision-making.
5. To evaluate industrial marketing systems, channels, and operational efficiency in B2B markets.

Course Contents

Module I: Introduction to Industrial Marketing (7 Hours)

Introduction to industrial marketing; concept, nature and scope; difference between industrial and consumer marketing; industrial marketing landscape; economics of industrial demand; classification of industrial customers; importance of B2B markets; case studies.

Module II: Industrial Buying Behaviour (8 Hours)

Organisational procurement process; characteristics of industrial buying behaviour; purchasing in government organisations; industrial buying decision process; buying centre roles; stages in buying; factors influencing industrial purchase decisions; case studies.

Module III: Inputs and Strategic Dimensions in Industrial Marketing (8 Hours)

Uncertainty in industrial markets; role of purchasing agents; negotiation in industrial marketing; relationship management in B2B markets; macro and micro environmental variables; industrial market segmentation; introduction to strategic planning in industrial marketing; case studies.

Module IV: Strategy, Channels and Logistics (9 Hours)

Strategic planning process; McKinsey 7S framework; industrial marketing strategy formulation; channel participants and functions; selection of distributors and representatives; dual distribution channels; logistics and physical distribution; customer service in industrial markets; case studies.

Module V: Pricing, Sales Force and Marketing Control (8 Hours)

Industrial pricing concepts; derived demand pricing; pricing strategies in industrial markets; cost-based and value-based pricing; sales force planning and management; motivation and compensation of sales force; marketing control systems; performance evaluation in industrial marketing.

Suggested Readings (Latest Edition)

Subject: Rural Marketing

Code: MK04 | Credits: 3 | Total Contact Hours: 40| Type: DSE

Course Objectives

1. To understand the structure, scope, and characteristics of rural markets in India.
2. To analyse differences between rural and urban consumer behaviour.
3. To develop appropriate rural marketing mix strategies including product, price, promotion, and distribution.
4. To evaluate challenges and opportunities in rural communication and distribution systems.
5. To apply rural marketing concepts to real-world business and development contexts.

Course Contents

Module I: Introduction to Rural Marketing (7 Hours)

Concept and scope of rural marketing; attractiveness and challenges of rural markets; comparison between rural and urban markets; rural marketing environment in India; size, structure, and emerging profile of rural markets; socio-economic and cultural factors influencing rural demand; case studies.

Module II: Rural Consumer Behaviour (9 Hours)

Rural consumer behaviour and decision-making process; determinants such as income, literacy, culture, and social influence; rural market research approaches; challenges in data collection; rural marketing information systems; case studies.

Module III: Rural Marketing Mix and Product–Pricing Strategies (9 Hours)

Rural market segmentation and targeting; positioning strategies; product planning and adaptation for rural needs; product innovation for rural markets; pricing strategies including penetration pricing, value-based pricing, and affordability-driven models; challenges in rural pricing decisions.

Module IV: Rural Communication and Promotion Strategies (7 Hours)

Challenges in rural communication; design of effective rural advertising strategies; use of traditional media (haats, melas, wall paintings, folk media) and digital media; branding in rural markets; role of awareness campaigns; communication barriers and solutions in rural outreach.

Module V: Rural Distribution Systems and Market Development (8 Hours)

Rural distribution channels and logistics; role of intermediaries; last-mile delivery challenges; rural supply chain innovations; channel management strategies; improving rural market penetration and service delivery.

Subject: Integrated Marketing Communication and Brand Management

Code: MK05 | Credits: 3 | Total Contact Hours: 40| Type: DSE

1. To understand the concepts, principles, and evolution of Integrated Marketing Communication (IMC) and brand management in modern marketing systems.
2. To analyse brand positioning strategies and communication frameworks used for effective brand building and differentiation.
3. To develop integrated marketing communication programmes using appropriate promotional tools and media channels.
4. To evaluate brand equity and communication effectiveness using established models, metrics, and analytical frameworks.
5. To apply IMC and branding concepts to design coherent, customer-centric, and competitive brand strategies across multiple platforms and touchpoints.

Course Contents

Module I: Foundations of IMC and Branding (7 Hours)
Concept of Integrated Marketing Communication (IMC); evolution and importance of IMC; promotional mix and communication tools; role of IMC in brand building; customer decision-making process; brand concept, brand identity, brand awareness, and brand equity; role of integrated communication in shaping brand perception; stakeholder communication.

Module II: Strategic Communication Planning (9 Hours)
IMC planning process; communication objectives and goal setting; DAGMAR model and Hierarchy of Effects model; message strategy development; media planning and selection; brand positioning and value proposition; budgeting for IMC programmes; designing competitive brand communication strategies.

Module III: IMC Tools and Campaign Development (9 Hours)
Advertising, sales promotion, public relations, personal selling, direct marketing; sponsorships, events, and product placement; digital marketing, social media marketing, influencer marketing; packaging communication; integration of offline and online communication tools; consistency in brand messaging; campaign design and execution.

Module IV: Brand Management and Brand Equity (8 Hours)
Concept and dimensions of brand equity; brand awareness, perceived quality, brand associations, and brand loyalty; brand identity and brand image; managing and sustaining brand equity; brand extension strategies; brand portfolio management; role of branding in competitive advantage.

Module V: IMC Evaluation and Brand Performance (7 Hours)
Measurement of IMC effectiveness; pre-testing, concurrent testing, and post-testing techniques; communication impact analysis; customer feedback systems; brand performance measurement tools; ROI in marketing communication; evaluation of brand campaigns; continuous improvement in branding strategies.

Practical Activities

1. Selection of a well-known brand and map all its communication channels such as advertising, social media, PR, influencer marketing, and packaging, and analysing how these channels are integrated to deliver a consistent brand message, thereby developing a clear understanding of Integrated Marketing Communication (IMC) and its role in unified brand communication.
2. Design of a mini-IMC campaign for a product launch including communication objectives, message strategy, media mix i.e. online and offline, and basic budgeting, and present a campaign

storyboard, thereby gaining practical understanding of IMC planning, integration of communication tools, and campaign execution.

3. Analysis of a brand using Aaker's brand equity dimensions like awareness, perceived quality, brand associations, and loyalty to understand the impacts of marketing communication on brand performance.

Course Outcomes (COs) with Bloom's K-Levels Mapping

CO No.	Course Outcome Statements	Bloom's K-Levels
CO1	Explain the concepts, principles and evolution of integrated marketing communication and brand management.	Understand (K2)
CO2	Describe brand positioning strategies and communication planning frameworks.	Understand (K2)
CO3	Apply IMC tools and media selection techniques to prepare a campaign plan.	Apply (K3)
CO4	Apply brand equity models and communication metrics to measure brand performance.	Apply (K3)
CO5	Apply IMC and branding concepts to build coordinated brand strategies across channels.	Apply (K3)

Subject: Sales and Distribution Management

Code: MK06 | Credits: 3 | Total Contact Hours: 40| Type: DSE

Course Objectives

1. To introduce the fundamental concepts of sales and distribution in business.
2. To develop basic communication and customer interaction skills.
3. To familiarize students with sales processes and customer relationship management.
4. To understand the role of intermediaries, retailing, and distribution channels.
5. To provide an overview of logistics, e-commerce, and contemporary distribution practices.

Course Contents

Module I: Introduction to Sales and Marketing Channels (8 Hours)

Meaning and importance of sales; role of sales in business organizations; relationship between marketing and sales; concept of customer value and customer satisfaction; personal selling and its importance; types of sales jobs; introduction to marketing channels; producers, wholesalers, retailers, and consumers; overview of distribution systems in India.

Module II: Communication and Customer Relationship Skills (8 Hours)

Business communication fundamentals; verbal and non-verbal communication; listening skills; customer interaction and relationship building; handling customer queries and complaints; professional etiquette; teamwork and interpersonal skills; introduction to Customer Relationship Management (CRM).

Module III: Basics of Selling Process (8 Hours)

Understanding customer needs; stages of the selling process; prospecting and lead generation; sales presentation techniques; handling customer objections; closing sales; follow-up and after-sales service; ethical issues in selling; role of technology in sales activities.

Module IV: Retailing and Distribution Fundamentals (8 Hours)

Concept and functions of retailing; types of retail formats; wholesaling and its role; distribution channels and intermediaries; channel functions and channel members; inventory basics; introduction to supply chains; distribution challenges in urban and rural markets.

Module V: Logistics, E-Commerce and Emerging Trends (8 Hours)

Introduction to logistics and supply chain management; transportation and warehousing basics; order processing; e-commerce and online retailing; digital marketplaces; omnichannel retailing; social commerce; sustainability in distribution; future trends in sales and distribution management.

Practical Activities

1. Role play on customer interaction and sales presentation.
2. Preparation of a simple sales pitch for a product.
3. Retail store observation and reporting.
4. CRM software demonstration and practice.
5. Case study and analysis on e-commerce distribution models.
6. Group presentation on emerging trends in retailing and logistics.

Course Outcomes (COs) with Bloom's K-Levels Mapping

CO No.	Course Outcome Statements	Bloom's K-Level
CO1	Explain the basic concepts of sales management, marketing channels and customer value.	Understand (K2)
CO2	Apply effective communication and customer interaction techniques in selling situations.	Apply (K3)
CO3	Apply the steps of the personal selling process to business situations.	Apply (K3)
CO4	Describe the functions of retailing, wholesaling and distribution channels.	Understand (K2)
CO5	Explain the role of logistics, e-commerce and emerging technologies in distribution systems.	Understand (K2)

SPECIALISATION GROUP– FINANCE

Subject: Investment Analysis and Portfolio Management

Code: FM01 | Credits: 3 | Total Contact Hours: 40| Type: DSE

Course Objectives

1. To understand the concepts of investment, risk, return, and investment decision-making.
2. To analyse financial markets and various investment instruments.
3. To apply fundamental and technical analysis techniques for security valuation.
4. To construct diversified portfolios using modern portfolio theory.
5. To evaluate portfolio performance using risk-return measures and financial models.

Course Contents

Module I: Conceptual Framework of Investments (8 Hours)

Meaning and nature of investment; investment objectives and process; investment vs speculation; risk and return concepts; investment avenues including equity, debt, mutual funds, commodities, and derivatives; role of investors and market participants in financial decision-making.

Module II: Financial Markets and Instruments (10 Hours)

Structure of financial markets; money market and capital market instruments; equity, debt, forex, commodity, and derivative markets; IPOs and exchange mechanisms; OTC vs exchange-traded markets; regulatory framework; role of RBI and SEBI in market regulation.

Module III: Fundamental and Technical Analysis (10 Hours)

Macroeconomic analysis (GDP, inflation, interest rates); industry and company analysis; financial statement interpretation; valuation basics; technical analysis concepts; charting techniques; Dow Theory; Elliott Wave Theory; chart patterns.

Module IV: Portfolio Theory and Construction (6 Hours)

Portfolio concept and diversification; Modern Portfolio Theory (Markowitz model); Efficient Frontier; CAPM framework; risk-return optimization; asset allocation strategies; active vs passive investment strategies; behavioural aspects of investing.

Module V: Portfolio Performance Evaluation (6 Hours)

Performance evaluation techniques; Sharpe Ratio, Treynor Ratio, Jensen's Alpha; risk-adjusted return measures; portfolio revision and rebalancing; measurement of systematic and unsystematic risk; interpretation of portfolio outcomes; investor behaviour and decision biases.

Course Outcomes (COs) with Bloom's K- Levels Mapping

CO No.	Course Outcomes Statements	Bloom's K-Levels

CO1	Define the concepts of investment, risk, return and the investment decision process.	Remember (K1)
CO2	Explain the structure of financial markets and the features of major investment instruments.	Understand (K2)
CO3	Apply fundamental and technical analysis techniques to evaluate securities.	Apply (K3)
CO4	Apply Markowitz and CAPM frameworks to compute portfolio risk, return and weights.	Apply (K3)
CO5	Apply risk-adjusted performance measures such as Sharpe, Treynor and Jensen to portfolios.	Apply (K3)

Subject: Financial Markets, Products and Services

Code: FM02 | Credits: 3 | Total Contact Hours: 40| Type: DSE

Course Objectives

1. To understand the structure, role, and functioning of financial markets in the economy.
2. To analyse different financial products and their risk-return characteristics.
3. To evaluate the role of financial intermediaries and financial services in capital formation.
4. To apply financial concepts to real-world investment and financing decisions.
5. To develop analytical skills for evaluating financial service instruments and market-based solutions.

Course Contents

Module I: Financial System and Market Structure (10 Hours)

Financial system: meaning, structure, functions, and significance; financial intermediation and role of intermediaries; money market instruments (Treasury Bills, CPs, CDs, call money, MMMFs); capital market structure; primary and secondary markets; IPOs, book building, rights issue, bonus issue; stock exchanges (NSE, BSE); trading mechanisms, settlement cycle (T+2), demat system; SEBI role and regulatory framework; investor protection mechanisms; Digital Financial Ecosystem in India (UPI, NEFT, IMPS architecture overview); Digital wallets and payment gateways; Introduction to Digital Banking and Neo-banks.

Module II: Leasing and Hire Purchase (8 Hours)

Concept of leasing; types of leases; lease evaluation from lessee and lessor perspectives; advantages and limitations; tax implications; buy vs lease decision-making; hire purchase system; comparison between hire purchase and installment purchase; major leasing institutions in India and their role in financial decision-making; Introduction to Blockchain and smart contracts in leasing agreements.

Module III: Mutual Funds and Credit Rating (8 Hours)

Mutual funds: structure, types, advantages, and limitations; NAV calculation; SIP and SWP; entry and exit loads; mutual fund regulation in India; credit rating agencies; rating process, symbols, and methodology; role and importance of credit ratings in investment decisions; Robo-advisory, Algorithm credits and AI-based portfolio recommendations

Module IV: Securitisation and Financial Services (6 Hours)

Concept of securitisation; process and structure; benefits and limitations; overview of financial services industry; fund-based vs fee-based services; role of financial intermediaries in service delivery; introduction to structured financial products in modern markets; Introduction to tokenisation of financial assets and RegTech (Regulatory Technology) for compliance automation.

Module V: Factoring, Forfaiting and Bill Discounting (8 Hours)

Factoring: meaning, types (recourse/non-recourse), domestic and international factoring; cost structure and process; bill discounting and rediscounting; forfaiting: mechanism, features, and applications; comparative analysis of factoring, forfaiting, and bill discounting; practical applications and numerical problems.

Course Outcomes (COs) with Bloom's K- Levels Mapping

CO No.	Course Outcome Statements	Bloom's K-Levels
CO1	Explain the structure, functions and regulatory framework of the Indian financial system.	Understand (K2)
CO2	Differentiate money market and capital market instruments and their uses.	Understand (K2)
CO3	Describe financial products and services such as mutual funds, leasing, hire purchase, credit rating and securitisation.	Understand (K2)
CO4	Apply the mechanisms of factoring, forfaiting and bill discounting to business financing situations.	Apply (K3)
CO5	Apply financial market concepts to investment, financing and risk management decisions.	Apply (K3)

Subject: Financial Analytics

Code: FM03 | Credits: 3 | Total Contact Hours: 40| Type: DSE

Course Objectives

1. To apply data analysis tools to summarise and interpret financial datasets.
2. To build and implement financial models using Excel and statistical software.
3. To analyse financial risks and portfolio performance using quantitative techniques.
4. To apply time-series methods for financial forecasting.
5. To evaluate forecasting models for financial decision-making.

Course Contents

Module I: Financial Data Analytics and Visualisation (7 Hours)

Financial data types and sources; data cleaning and preprocessing; descriptive analytics; pivot tables and dashboards in Spreadsheet; financial data visualisation using charts; introduction to data-driven financial decision-making; applications of analytics in fraud detection, risk profiling, and pricing analytics.

Module II: Financial Modelling and Quantitative Analysis (9 Hours)

Financial modelling concepts; Spreadsheet/Python/R-based modelling; computation of returns, portfolio returns, and risk measures; regression-based financial analysis; factor models; model building for investment decision-making; introduction to model validation techniques.

Module III: Portfolio and Risk Analytics (9 Hours)

Risk measurement techniques; variance, standard deviation, beta; portfolio risk-return analysis; diversification principles; stress testing and scenario analysis; CAPM-based analytics; interpretation of financial risk indicators for decision support.

Module IV: Time Series Analysis in Finance (8 Hours)

Time-series data structure; trend, seasonal, cyclical components; moving averages and exponential smoothing; least squares forecasting; trend projection models; application of time-series techniques in stock prices, returns, and macro-financial variables.

Module V: Advanced Forecasting and Financial Decision Models (7 Hours)

Introduction to Autocorrelation and Autoregressive Integrated Moving Average (ARIMA); model selection and validation; comparative forecasting methods; financial interpretation of forecasts for strategic decision-making.

Practical Activities

1. Creating bar charts, pie charts, line charts, and dashboards using Excel for financial data visualization.
2. Calculating stock returns, mutual fund returns, and portfolio returns using spreadsheet formulas.
3. Portfolio risk analysis measures such as average return, standard deviation, and diversification using sample investment data.
4. Time-series forecasting using Excel for moving averages and trend analysis to forecast sales, stock prices, or exchange rates.

Course Outcomes (COs) with Bloom's K-Levels Mapping

CO No.	Course Outcome Statements	Bloom's K-Levels
CO1	Explain the concepts of financial data analytics, data types and visualisation techniques used in finance.	Understand (K2)
CO2	Apply Excel, Python or R based tools to process, summarise and visualise financial datasets.	Apply (K3)
CO3	Apply quantitative and statistical techniques to compute risk, return and portfolio performance.	Apply (K3)
CO4	Apply basic time series forecasting models to financial data.	Apply (K3)
CO5	Apply financial models to prepare forecasts supporting financial planning decisions.	Apply (K3)

Subject: Introduction to Financial Derivatives

Code: FM04 | Credits: 3 | Total Contact Hours: 40| Type: DSE

Course Objectives

1. To understand the fundamental concepts and structure of financial derivatives.
2. To analyse forward, futures, and option contracts and their market mechanisms.
3. To understand basic derivative pricing models and valuation concepts.
4. To apply derivatives for hedging and risk management purposes.
5. To evaluate the role of derivatives in managing financial risk exposure.

Course Contents

Module I: Introduction to Financial Derivatives (7 Hours)

Meaning and evolution of derivatives; features of forward, futures, and options contracts; types of derivative markets (exchange-traded and OTC); market participants and their roles; applications of derivatives in equity, currency, commodity, and agricultural markets; overview of derivative exchanges and regulatory framework.

Module II: Forward and Futures Markets (9 Hours)

Structure of forward and futures contracts; pricing of forwards and futures; cost of carry model; spot–futures price relationship; contango and backwardation; convergence of prices; basic hedging concepts using futures contracts.

Module III: Options Markets and Valuation (8 Hours)

Introduction to call and put options; option payoffs; intrinsic and time value of options; Binomial Option Pricing Model (basic); basic concept of volatility and option pricing inputs.

Module IV: Interest Rate and Credit Derivatives (8 Hours)

Forward Rate Agreements (FRAs); interest rate swaps; currency swaps; Credit Default Swaps (CDS); overview of structured credit instruments; role of derivatives in global financial markets; basic understanding of financial crises linked to derivatives.

Module V: Applications of Derivatives in Risk Management (8 Hours)

Risk exposure in business; hedging strategies using forwards, futures, and options; commodity and currency risk management; evaluation of hedging effectiveness; real-world applications of derivatives in corporate decision-making.

Course Outcomes (COs) with Bloom's K-Levels Mapping

CO No.	Course Outcome Statement	Bloom's K-Levels

CO1	Explain the structure, features and functioning of forward, futures and options contracts.	Understand (K2)
CO2	Apply cost of carry and option valuation models to compute the fair value of derivative contracts.	Apply (K3)
CO3	Describe interest rate and credit derivatives and their role in managing financial risk.	Understand (K2)
CO4	Apply hedging strategies using futures and options to given risk exposures.	Apply (K3)
CO5	Apply derivative-based risk management techniques to business and trading situations.	Apply (K3)

Subject: Introduction to Corporate Finance

Code: FM05 | Credits: 3 | Total Contact Hours: 40| Type: DSE

Course Objectives

1. To understand the principles, concepts, and scope of corporate financial management and its role in business decision-making.
2. To evaluate investment decisions using capital budgeting techniques and financial appraisal methods.
3. To analyse financing decisions by applying concepts of cost of capital and capital structure theories.
4. To assess dividend policy decisions and their implications for firm value and shareholder wealth.
5. To apply working capital management techniques and Excel-based tools for effective financial decision-making.

Course Contents

Module I: Fundamentals of Corporate Finance (8 Hours)

Nature, scope, and objectives of corporate finance; finance function and its role in organisations; financial decision-making framework; time value of money concepts including present value, future value, annuities, and perpetuities; application of Excel in time value computations.

Module II: Capital Budgeting and Investment Decisions (9 Hours)

Capital budgeting process; estimation of cash flows; evaluation techniques including Payback Period, ARR, NPV, IRR, and Profitability Index; comparison of NPV and IRR; risk in capital budgeting; case studies.

Module III: Cost of Capital and Financing Decisions (8 Hours)

Concept of cost of capital; cost of debt, equity, preference shares, and retained earnings; Weighted Average Cost of Capital (WACC); operating and financial leverage; cases on EBIT-EPS analysis.

Module IV: Dividend Policy and Distribution Decisions (7 Hours)

Determinants of dividend policy; forms of dividends including cash dividends, bonus shares, and stock splits; payout policies and corporate dividend practices; case studies.

Module V: Working Capital Management (8 Hours)

Importance of working capital; cash management techniques; Receivables Management – Objectives; Credit Policy, Cash Discount, Debtors Outstanding and Ageing Analysis; Collection Cost, Capital Cost, Default Cost, Delinquency Cost; Credit policy; estimation of working capital requirements; short-term financing sources and liquidity management.

Course Outcomes (COs) with Bloom's K-Level Mapping

CO No.	Course Outcome Statements	Bloom's K-Levels
CO1	Explain the principles, scope and financial environment of corporate finance.	Understand (K2)
CO2	Apply capital budgeting techniques such as NPV, IRR and payback period to investment proposals.	Apply (K3)
CO3	Compute the cost of capital and apply capital structure concepts to financing decisions.	Apply (K3)
CO4	Explain dividend policy decisions and their effect on shareholder wealth and firm value.	Understand (K2)
CO5	Apply spreadsheet-based tools to working capital and corporate finance problems.	Apply (K3)

Subject: Fundamentals of Financial Modelling

Code: FM06 | Credits: 3 | Total Contact Hours: 40| Type: DSE

Course Objectives

1. Develop basic proficiency in MS Excel for financial modelling applications.
2. Construct simple financial statement and capital budgeting models.
3. Understand foundational valuation concepts using discounted cash flow logic.
4. Apply basic risk measurement techniques in financial decision-making.
5. Translate core financial concepts into structured spreadsheet-based models.

Course Contents

Module I: Fundamentals of Financial Modelling (7 Hours)

Introduction to financial modelling; role of Excel in finance; structure of financial models; data organisation and cleaning; basic Excel functions for finance; linking worksheets; introduction to financial decision-making models.

Module II: Financial Statement Basics and Analysis (9 Hours)

Structure of financial statements (Income Statement, Balance Sheet, Cash Flow Statement); ratio analysis fundamentals; basic forecasting of revenues and expenses; linking financial statements; introduction to simple financial projections.

Module III: Investment and Capital Budgeting Models (10 Hours)

Simple and compound Interest modelling; Present Value (PV) and Future Value (FV) models; Annuity and Perpetuity models; Loan Amortization and EMI calculation; Cash Flow Forecasting; Capital Budgeting Models: Payback Period, Net Present Value (NPV); Internal Rate of Return (IRR); Basic Investment Decision Modelling in Spreadsheets: Sensitivity Analysis; Scenario Analysis; Goal Seek and What-If Analysis.

Module IV: Basics of Valuation (7 Hours)

Introduction to valuation concepts; discounted cash flow basics; free cash flow concept (introductory level); simple growth assumptions; basic valuation framework and interpretation.

Module V: Introduction to Risk and Simulation (7 Hours)

Concept of risk and return; basic volatility measurement; introduction to Value at Risk (conceptual); simple scenario analysis and sensitivity analysis; introduction to simulation concepts in Excel.

Course Outcomes (COs) with Bloom's Taxonomy Level Mapping

CO No.	Course Outcome Statements	Bloom's Taxonomy Level
CO1	Explain the fundamentals of financial modelling, model structure and the Excel tools used.	Understand (K2)

CO2	Apply financial statement analysis and forecasting techniques using spreadsheet models.	Apply (K3)
CO3	Apply time value of money concepts to build simple capital budgeting models.	Apply (K3)
CO4	Apply discounted cash flow techniques to prepare basic valuation models.	Apply (K3)
CO5	Apply scenario analysis and basic simulation techniques to assess financial risk.	Apply (K3)

SPECIALISATION GROUP– HUMAN RESOURCE

Subject: Industrial Relations and Labour Laws

Code: HR01 | Credits: 3 | Total Contact Hours: 40| Type: DSE

Course Objectives

1. To understand the concepts and significance of industrial relations in organizations.
2. To explain the role of trade unions and employee participation in maintaining industrial harmony.
3. To examine collective bargaining, grievance handling, and industrial dispute resolution mechanisms.
4. To understand the provisions of major labour laws applicable to business organizations.
5. To apply industrial relations and labour law concepts to workplace situations and HR practices.

Course Contents

Module I: Introduction to Industrial Relations (7 Hours)

Meaning, nature, scope, and importance of industrial relations; objectives of industrial relations; parties to industrial relations: employers, employees, trade unions, and government; factors affecting industrial relations; approaches to industrial relations; impact of technology and changing workplace practices on industrial relations; industrial relations in the Indian context.

Module II: Trade Unions and Workers' Participation (9 Hours)

Trade unions: meaning, objectives, functions, and structure; growth of trade union movement in India; rights and responsibilities of trade unions; challenges faced by trade unions; workers' participation in management: concept, objectives, forms, and benefits.

Module III: Collective Bargaining and Grievance Management (9 Hours)

Collective bargaining: concept, importance, principles, and process; prerequisites for successful collective bargaining; collective agreements; labour-management cooperation; grievance management: meaning, causes, effects, and grievance redressal procedure; negotiation and conflict management in organizations.

Module IV: Industrial Disputes and Resolution Mechanisms (7 Hours)

Industrial disputes: meaning, causes, and types; strikes and lockouts; layoff and retrenchment; machinery for settlement of industrial disputes; conciliation, arbitration, and adjudication; labour courts and industrial tribunals; measures for promoting industrial peace and harmony.

Module V: Labour Laws and Employee Welfare (8 Hours)

Objectives and importance of labour legislation; overview of Factories Act, Payment of Wages Act, Minimum Wages Act, Payment of Bonus Act, Employees' State Insurance (ESI) Act, Employees' Provident Fund (EPF) Act, Payment of Gratuity Act with its latest updates.

Suggested Readings (Latest Edition)

CO1	Explain the concepts, scope and significance of industrial relations in organisations.	Understand (K2)
CO2	Describe the role of trade unions and the forms of workers participation in management.	Understand (K2)
CO3	Apply collective bargaining and grievance handling procedures to workplace situations.	Apply (K3)
CO4	Explain the causes of industrial disputes and the statutory machinery available for their resolution.	Understand (K2)
CO5	Apply the provisions of major labour laws and welfare measures to organisational cases.	Apply (K3)

Subject: Performance Management

Code: HR02 | Credits: 3 | Total Contact Hours: 40| Type: DSE

Course Objectives

1. To understand the concepts, principles, and importance of performance and compensation management.
2. To examine various performance planning, appraisal, and feedback mechanisms used in organizations.
3. To analyse the relationship between performance management, compensation, and employee motivation.
4. To evaluate talent management, competency mapping, career development, and succession planning practices.
5. To apply performance and compensation management tools to improve employee and organizational effectiveness.

Course Contents

Module I: Introduction to Performance Management (7 Hours)

Meaning, concept, objectives, and importance of performance management; performance management versus performance appraisal; performance management as a continuous process; components of performance management systems; strategic role of performance management; performance management cycle.

Module II: Performance Planning and Appraisal Systems (9 Hours)

Performance planning and goal setting; performance standards and key result areas (KRAs); methods of performance appraisal including Graphic Rating Scale, Ranking Method, Paired Comparison Method, Forced Distribution Method, Critical Incident Method, Behaviourally Anchored Rating Scales (BARS), Management by Objectives (MBO), and 360-Degree Feedback; case studies.

Module III: Performance Based Compensation Management (8 Hours)

Compensation management: concept, objectives, and significance; components of compensation; wage and salary administration; job evaluation and pay structures; performance-related pay (PRP); incentives, bonuses, commissions, and rewards; employee benefits and non-monetary rewards; contemporary trends in performance-based compensation.

Module IV: Learning, Talent Management and Career Development (8 Hours)

Learning organization concept and characteristics; Peter Senge's Learning Organization Model; talent management and employee retention strategies; competency mapping and competency frameworks; career planning and career development; succession planning; coaching and mentoring: concepts, roles, advantages, and limitations; case studies.

Module V: Contemporary Issues in Performance and Compensation Management (8 Hours)

HR analytics in performance management; performance management audit; ethical and legal issues in performance appraisal; pay equity and fairness; employee engagement and recognition programmes; case studies.

Suggested Readings (Latest Edition)

Course Outcomes (COs) with Bloom's K-Level Mapping

CO No.	Course Outcome Statements	Bloom's K-Levels
CO1	Explain the concepts, objectives and process of performance and compensation management.	Understand (K2)
CO2	Apply performance planning and appraisal techniques to evaluate employee performance.	Apply (K3)
CO3	Describe compensation structures and performance-based reward systems used in organisations.	Understand (K2)
CO4	Apply competency mapping, career development and succession planning techniques.	Apply (K3)
CO5	Apply digital tools and HR analytics to performance and compensation decisions.	Apply (K3)

Subject : HR Analytics

Code: HR03 | Credits: 3 | Total Contact Hours: 40| Type: DSE

Course Objectives

1. To understand the concepts, scope, and significance of HR Analytics in modern organisations.
2. To identify and interpret key HR metrics and workforce data for managerial decision-making.
3. To apply basic statistical and analytical tools to analyse HR-related data.
4. To develop HR dashboards, scorecards, and analytical reports for organisational use.
5. To evaluate the role of predictive analytics and data-driven HR strategies in improving workforce effectiveness.

Course Contents

Module I: Introduction to HR Analytics and Workforce Data (7 Hours)

Concept, evolution, and scope of HR Analytics; People Analytics and Workforce Analytics; importance of data-driven HR management; HR analytics ecosystem; strategic role of HR analytics; HR data sources; workforce databases; HR information systems (HRIS); challenges in HR data collection; ethical and legal issues in HR analytics; data privacy and confidentiality.

Module II: HR Metrics and Measurement Systems (7 Hours)

Concept of HR metrics and KPIs; workforce demographics and diversity metrics; recruitment and selection metrics; employee turnover and retention measures; absenteeism and productivity metrics; training and development metrics; compensation and benefits analytics; employee engagement indicators; benchmarking HR performance; data quality and reliability.

Module III: Statistical Tools for HR Analytics (9 Hours)

Introduction to descriptive analytics; measures of central tendency and dispersion; frequency distributions; data visualisation techniques; charts, graphs, and dashboards; spreadsheet applications in HR analytics; correlation analysis; introduction to regression analysis; interpretation of analytical results for HR decision-making.

Module IV: HR Analytics Frameworks and Applications (9 Hours)

HR Analytics process and lifecycle; LAMP Framework (Logic, Analytics, Measures, Process); HCM:21 Framework; levels of HR analytics—descriptive, diagnostic, predictive, and prescriptive analytics; HR scorecard development; workforce planning analytics; performance analytics; employee engagement and retention analytics; analytics for talent management.

Module V: Predictive HR Analytics and Strategic Decision-Making (8 Hours)

Predictive analytics in HR; employee attrition prediction; talent acquisition analytics; succession planning analytics; workforce productivity analysis; AI and machine learning applications in HR; HR dashboards and reporting systems; HR analytics for strategic decision-making; future trends in HR analytics; case studies on analytics-driven HR practices.

Practical Exercises

1. Analyse employee demographic data and prepare an HR metrics report.
2. Calculate recruitment, turnover, absenteeism, and retention metrics using spreadsheet software.
3. Create HR dashboards using Excel or Google Sheets.
4. Perform basic correlation and regression analysis on employee performance data.
5. Develop an HR scorecard for a hypothetical organisation.
6. Design an employee attrition prediction model using sample datasets.
7. Prepare an HR analytics report and present workforce insights.
8. Analyse a real-world case on HR analytics implementation and strategic impact.

Suggested Readings (Latest Edition)

1. Isson, J. P., & Harriott, J. S. *People Analytics in the Era of Big Data: Changing the Way You Attract, Acquire, Develop, and Retain Talent* – Wiley.
2. Edwards, M. R., & Edwards, K. *Predictive HR Analytics: Mastering the HR Metric* – Kogan Page Publishers.
3. VanWieren, S. *Quantifiably Better: Delivering Human Resource Analytics from Start to Finish* – Technics Publications.
4. Evans, J. R. *Business Analytics* – Pearson Education.
5. Bhattacharyya, D. K. *HR Analytics: Understanding Theories and Applications* – SAGE Publications India.
6. West, M. *People Analytics For Dummies* – Wiley.

Course Outcomes (COs) with Bloom's Taxonomy Level Mapping

CO No.	Course Outcome Statements	Bloom's K-Levels
CO1	Explain the concepts, scope and applications of HR analytics in contemporary organisations.	Understand (K2)
CO2	Apply HR metrics, KPIs and workforce indicators to measure organisational performance.	Apply (K3)
CO3	Use statistical and analytical tools to examine HR data and generate workforce insights.	Apply (K3)
CO4	Apply scorecards, dashboards and visualisation techniques to present HR data for decision-making.	Apply (K3)
CO5	Apply analytical evidence to decisions on recruitment, retention, engagement and talent management.	Apply (K3)

Subject : Negotiation Skills

Code: HR04 | Credits: 3 | Total Contact Hours: 40| Type: DSE

Course Objectives

1. To understand the principles, processes, and strategies of effective negotiation.
2. To analyse the psychological, behavioural, and cultural factors influencing negotiation outcomes.
3. To apply negotiation frameworks and communication techniques in professional and organisational contexts.
4. To evaluate ethical dilemmas, conflicts, and challenges encountered during negotiations.
5. To develop collaborative and win-win negotiation strategies for achieving sustainable agreements.

Course Contents

Module I: Foundations of Negotiation (7 Hours)

Meaning, nature, and importance of negotiation; negotiation process and stages; distributive and integrative negotiations; BATNA (Best Alternative to a Negotiated Agreement); ZOPA (Zone of Possible Agreement); negotiation planning and preparation; setting objectives and priorities; anchoring effect in negotiations; perception management; impression management.

Module II: Communication, Behaviour, and Relationship Building (9 Hours)

Negotiation strategies and styles; listening skills and questioning techniques; persuasion and influence; attribution errors and perception traps; building trust and rapport; emotional intelligence in negotiations; cross-cultural negotiations; managing stakeholder relationships through effective communication; case studies.

Module III: Psychology and Neuroscience of Negotiation (8 Hours)

Behavioural foundations of negotiation; cognitive biases and decision-making errors; psychological barriers to successful negotiation; rationality and bounded rationality; biases of the mind and emotions; negotiation under uncertainty; neuroscience of negotiation; emotional regulation and brain-based decision processes; behavioural economics perspectives on negotiation outcomes.

Module IV: Conflict Resolution and Ethical Negotiations (8 Hours)

Sources of conflict in organisations; managing power imbalances; negotiating from positions of strength and weakness; handling deception, manipulation, and misinformation; ethical issues in negotiation; recognising and resolving ethical dilemmas; crisis negotiations; case studies.

Module V: Applied Negotiation and Real-World Cases (8 Hours)

Team negotiations and multiparty negotiations; negotiation in business, HR, labour-management relations, sales, and procurement; collaborative problem-solving; value creation and value claiming; negotiation simulations; case studies on successful and failed negotiations; contemporary negotiation challenges.

Practical Activities

1. Role-play exercises on salary, vendor, and customer negotiations.
2. BATNA and ZOPA identification workshops.
3. Negotiation simulation games involving conflict resolution.
4. Case analysis of successful business negotiations.
5. Cross-cultural negotiation exercises.
6. Group negotiation and team bargaining simulations.
7. Ethical dilemma analysis in negotiation scenarios.
8. Reflection journal on personal negotiation strengths and weaknesses

Suggested Readings (Latest Edition)

1. Gates, S. The Negotiation Book: Your Definitive Guide to Successful Negotiating. Wiley (Capstone).
2. Jagodzinski, K. *Negotiation Booster: The Ultimate Self-Empowerment Guide to High-Impact Negotiations*. Business Expert Press.
3. Malhotra, D., & Bazerman, M. H. *Negotiation Genius*. Bantam Dell.
4. Lewicki, R. J., Barry, B., & Saunders, D. M. *Essentials of Negotiation*. McGraw Hill Education.
5. Fisher, R., Ury, W., & Patton, B. *Getting to Yes: Negotiating Agreement Without Giving In* . Penguin Books.
6. Schatzki, M. *Negotiating with Winning Words: Dialogue and Skills to Help You Come Out Ahead in Any Business Negotiation*. Business Expert Press.
7. Kahneman, D. *Thinking, Fast and Slow*. Penguin Books.
8. Ariely, D. *Predictably Irrational*. HarperCollins.
9. Johnson, E. *The Elements of Choice*. Riverhead Books.

Course Outcomes (COs) with Bloom's K-Level Mapping

CO No.	Course Outcome Statements	Bloom's K-Levels
CO1	Explain the concepts, principles and stages of the negotiation process.	Understand (K2)
CO2	Apply negotiation frameworks, communication techniques and relationship-building strategies in negotiation situations.	Apply (K3)
CO3	Describe the psychological, behavioural and cultural factors that influence negotiation outcomes.	Understand (K2)
CO4	Apply conflict resolution techniques and ethical standards to negotiation situations.	Apply (K3)
CO5	Apply integrative win-win negotiation strategies to organisational and business cases.	Apply (K3)

Subject : Talent Acquisition and Management

Code: HR05 | Credits: 3 | Total Contact Hours: 40| Type: DSE

Course Objectives

1. To understand the concepts, processes, and strategic importance of talent acquisition and talent management.
2. To analyse various talent sourcing, selection, and employer branding strategies used by organisations.
3. To apply competency mapping and assessment centre techniques for talent identification and development.
4. To evaluate career development, succession planning, and talent retention strategies.
5. To examine emerging trends, technological innovations, and ethical issues in talent management.

Course Contents

Module I: Introduction to Talent Acquisition and Talent Management (7 Hours)

Concept, scope, and significance of talent management; talent management framework; global talent management challenges; workforce planning and talent needs assessment; components of talent management; creating a talent-driven organisational culture; employer branding and employee value proposition (EVP); talent sourcing strategies; effective onboarding and employee socialisation.

Module II: Talent Acquisition Strategies and Assessment Centres (9 Hours)

Talent sourcing channels and digital recruitment platforms; campus recruitment, social media recruitment, and employee referrals; selection strategies for talent acquisition; concept and process of assessment centres; assessment tools and techniques; technology-enabled assessments; advantages and limitations of assessment centres.

Module III: Competency Management and Talent Development (9 Hours)

Concept and types of competencies; competency frameworks and models; competency mapping at individual and organisational levels; competency assessment techniques; role of training and development in talent management; identifying high-potential employees; talent development programmes; learning and development interventions; leadership development and capability building; case studies.

Module IV: Career Management, Succession Planning, and Talent Retention (9 Hours)

Career planning and career development concepts; career management models and practices; succession planning process and challenges; identification and development of future leaders; performance and potential matrix; mentoring and coaching for talent development; employee engagement and retention strategies; reward and recognition systems.

Module V: Strategic Talent Management and Future Trends (6 Hours)

Managing key talent and high performers; ethics in talent management; diversity, equity, and inclusion in talent practices; talent analytics and workforce intelligence; artificial intelligence in talent acquisition; gig workforce and remote talent management; case studies on talent management best practices.

Practical Exercises

1. Design a talent acquisition strategy for a start-up organisation.
2. Prepare an employer branding campaign for attracting young talent.
3. Conduct competency mapping for a selected job role.
4. Develop an assessment centre exercise for managerial recruitment.
5. Create a succession planning framework for a business organisation.
6. Design a mentoring programme for high-potential employees.

7. Analyse a talent retention case and recommend improvement strategies.
8. Prepare a talent analytics dashboard using workforce data.

Suggested Readings (Latest Edition)

1. Silzer, R., & Dowell, B. E. *Strategy-Driven Talent Management*. Wiley.
2. Joshi, G., & Vohra, V. *Talent Management*. Cengage Learning India.
3. Rao, T. V. *Hurconomics for Talent Management*. Pearson Education.
4. Berger, L. A., & Berger, D. R. *The Talent Management Handbook: Making Culture a Competitive Advantage by Acquiring, Identifying, Developing, and Promoting the Best People*. McGraw Hill.
5. Cappelli, P. *Talent on Demand: Managing Talent in an Age of Uncertainty*. Harvard Business Review Press.
6. Berger, L. A. *The Best Practices on Talent Management*. McGraw Hill.

Course Outcomes (COs) with Bloom's K-Level Mapping

CO No.	Course Outcome Statements	Bloom's K-Levels
CO1	Explain the concepts, processes and strategic significance of talent acquisition and talent management.	Understand (K2)
CO2	Apply talent sourcing, employer branding and selection techniques to attract and select talent.	Apply (K3)
CO3	Apply competency frameworks and assessment centre techniques to talent development.	Apply (K3)
CO4	Apply career management, succession planning and retention techniques in organisational settings.	Apply (K3)
CO5	Explain strategic talent management practices and emerging trends in the field.	Understand (K2)

Subject: Employee Life Cycle Management

Code: HR06 | Credits: 3 | Total Contact Hours: 40| Type: DSE

Course Objectives

1. To understand the structure and stages of the Employee Life Cycle in organisations.
2. To analyse recruitment, onboarding, development, retention, and exit processes.
3. To apply HR tools and practices to improve employee experience and engagement.
4. To evaluate performance management and compensation systems within the life cycle.
5. To evaluate integrated Employee Life Cycle strategies of organisations.

Course Contents

Module 1: Foundations of Employee Life Cycle & Recruitment (7 Hours)

Employee Life Cycle concept; stages and importance; HR role in managing lifecycle; workforce planning; job analysis and job design; legal and ethical aspects in hiring; introduction to onboarding and pre-joining engagement; case studies.

Module 2: Onboarding, Induction & Employee Socialisation (8 Hours)

Employee onboarding framework; induction process; organisational socialisation; orientation programmes; role clarity and expectation setting; onboarding effectiveness measurement; early engagement strategies; training needs identification; introduction to employee development pathways.

Module 3: Training, Development & Career Management (9 Hours)

Employee training and development; methods and evaluation of training effectiveness; career development planning; succession planning fundamentals; talent pipelines; mentoring and coaching systems; linking training with organisational capability building; creating continuous learning culture.

Module 4: Compensation & Retention (8 Hours)

Job evaluation; compensation structure; incentive systems; pay-for-performance models; employee engagement; motivation strategies; retention frameworks; employee satisfaction and workplace culture; case studies.

Module 5: Employee Well-being, Engagement & Exit Management (8 Hours)

Employee well-being and work-life balance; wellness programmes; engagement strategies; grievance handling; disciplinary procedures; employee experience management; exit management process; resignation, termination, and retirement procedures; exit interviews; alumni relations; HR analytics in lifecycle optimisation.

Practical Activities

1. Prepare a diagram of the Employee Life Cycle for any organisation.
2. Write a job description and job specification for any selected role.
3. Conduct a mock interview and prepare an evaluation sheet.
4. Design a basic onboarding plan for a new employee.
5. Prepare a basic compensation structure for a job role.
6. Identify training needs for a selected job and design a training plan.
7. Conduct a role-play of an exit interview.
8. Analyse basic HR data and write key observations.

Suggested Readings (Latest Edition)

1. Jacob Morgan. *The Employee Experience Advantage*, Wiley
2. Gary Dessler. *Human Resource Management*, Pearson Education

3. Wayne Mondy & Joseph Martocchio. *Human Resource Management*, Pearson
4. Tracy Maylett & Matthew Wride. *The Employee Experience*, Wiley
5. Natasha Hawker. *From Hire to Fire and Everything in Between*, Michael Hanrahan Publishing
6. Jeffrey A. Mello. *Strategic Human Resource Management*, Cengage
7. Bhattacharyya. *Training and Development: Theories and Applications*. 2nd Edition. Wiley.

Course Outcomes (COs) with Bloom's K-Levels Mapping

CO No.	Course Outcome Statements	Bloom's K-Levels
CO1	Describe the stages and structure of the employee life cycle.	Remember (K1)
CO2	Explain recruitment, onboarding, induction and employee socialisation processes.	Understand (K2)
CO3	Apply training, development and career management techniques in HR practice.	Apply (K3)
CO4	Apply compensation and retention techniques to employee engagement situations.	Apply (K3)
CO5	Apply well-being, engagement and exit management practices across the employee life cycle.	Apply (K3)

SPECIALISATION GROUP– BUSINESS ANALYTICS

Subject: Introduction to Business Analytics

Code: BA01 | Credits: 3 | Total Contact Hours: 40| Type: DSE

Course Objectives

1. To understand the basic concepts, scope, and importance of business analytics in organisations.
2. To identify different types of business analytics and their managerial applications.
3. To apply basic statistical and analytical tools for business decision-making.
4. To interpret data visualisations and business reports for insights.
5. To evaluate the role of analytics in improving business performance and competitiveness.

Course Contents

Module I: Foundations of Business Analytics (7 Hours)

Introduction to Business Analytics; evolution from business intelligence to analytics; data-driven decision-making; types of analytics (descriptive, diagnostic, predictive, prescriptive); role of analytics in modern organisations; data lifecycle in business; structured and unstructured data; introduction to tools and technologies used in analytics.

Module II: Data and Business Intelligence (9 Hours)

Concept of data in business context; data sources and data quality; data cleaning and preparation; introduction to databases; data warehousing concepts; business intelligence systems; dashboards and KPI tracking; role of Excel in business analytics; introduction to SQL and reporting tools.

Module III: Descriptive and Diagnostic Analytics (9 Hours)

Measures of central tendency and dispersion; data summarisation techniques; correlation and regression basics; trend and pattern analysis; data visualisation techniques; root cause analysis; interpretation of business data; introduction to statistical thinking for managers.

Module IV: Predictive and Prescriptive Analytics (8 Hours)

Introduction to forecasting techniques; time series basics; regression-based prediction; risk analysis; scenario and what-if analysis; optimisation concepts; decision models; basics of machine learning in business context; applications in marketing, finance, and operations.

Module V: Applications of Business Analytics (7 Hours)

Applications in marketing analytics (customer segmentation, pricing, sentiment analysis); financial analytics (credit scoring, risk analysis); case studies from Indian and global organisations; ethical issues in analytics.

Practical Activities

1. Data summarisation using Excel
2. Creation of dashboards and KPI reports
3. Correlation and trend analysis on business datasets
4. Basic forecasting using simple statistical tools
5. Interpretation of business case studies using analytics

Suggested Readings (Latest Edition)

1. U Dinesh Kumar. *Business Analytics: The Science of Data-Driven Decision Making* . Wiley India
2. Seema Acharya & Subhashini Chellappan. *Business Analytics*. Wiley India

3. S. Sumathi & S. N. Sivanandam. *Introduction to Data Mining and Business Intelligence* (Springer / Wiley India Editions)
4. G. Shailaja & K. V. S. Sarma. *Business Analytics and Intelligence*. Pearson India.
5. R. N. Prasad & Seema Acharya. *Fundamentals of Business Analytics*. Wiley India.

Course Outcomes (COs) with Bloom's K-Levels Mapping

CO No.	Course Outcome Statements	Bloom's K- Levels
CO1	Explain the fundamental concepts, scope and process of business analytics.	Understand (K2)
CO2	Differentiate descriptive, diagnostic, predictive and prescriptive analytics and their business applications.	Understand (K2)
CO3	Apply basic statistical tools to summarise and analyse business data.	Apply (K3)
CO4	Apply descriptive and diagnostic techniques to identify patterns in business datasets.	Apply (K3)
CO5	Apply analytical thinking to interpret data-based results for business problems.	Apply (K3)

Subject : Data Analytics Using R

Code: BA02 | Credits: 3 | Total Contact Hours: 40| Type: DSE

Course Objectives

1. To develop a foundational understanding of the R programming language and its role in business data analytics.
2. To acquire skills to structure, manage, and manipulate different types of data using R programming constructs.
3. To apply control structures and functions in R to solve basic business analytics problems.
4. To perform exploratory data analysis and generate meaningful statistical summaries from business datasets.
5. To create data visualisations using R and interpret insights for managerial decision-making.

Course Contents

Module I: Introduction to R Programming & Business Data Environment (8 Hours)

Introduction to R and its role in business analytics; installation and R environment setup (R and Rstudio); basic syntax; comments, identifiers, variables, constants; operators and precedence; introduction to business data types; working with strings; overview of data-driven decision-making in business contexts; importing and exporting data in R.

Module II: Data Structures in R (Vectors, Lists, Matrices) (8 Hours)

Data types in R (numeric, integer, logical, character, complex); vectors and vector operations; accessing, modifying, and deleting vectors; list creation and manipulation; converting lists to vectors; matrices creation and operations; matrix arithmetic and manipulation; introduction to structured business datasets.

Module III: Arrays, Factors and Data Frames (8 Hours)

Arrays and multidimensional data structures; factors and categorical data handling; data frames creation and operations; accessing and modifying data frames; data sorting, merging, sub-setting; data aggregation; data cleaning basics; preparing datasets for business analytics applications.

Module IV: Control Structures & Functions in R (7 Hours)

Decision-making structures (if, if-else, nested conditions, switch); loops (for, while, repeat); loop control (break, next); introduction to functions; built-in functions (statistical, mathematical, date-time); user-defined functions; recursion basics; application of functions in business analytics tasks.

Module V: Data Visualization and Business Analytics Applications (9 Hours)

Data visualisation using R: bar charts, histograms, line graphs, pie charts; grouped and stacked charts; interpretation of visual outputs; business data storytelling; introduction to exploratory data analysis (EDA); dashboards overview; business applications of R in marketing, finance, HR, and operations analytics.

Practical Activities

1. Data cleaning and manipulation using real-world business datasets in R.
2. Creation of vectors, matrices, data frames and performing basic operations.
3. Writing R functions to solve simple business analytics problems.
4. Generating charts (bar, histogram, line, pie) and interpreting business insights.
5. Case-based EDA of sales/HR/financial dataset using R.

Suggested Readings (Latest Edition)

1. Shmueli. *Data Mining for Business Analytics: An Indian Adaptation – Concepts, Techniques, and Applications in R*. Wiley.
2. Garrett Grolemund & Hadley Wickham . *R for Data Science*. O'Reilly Media,
3. Jeeva Jose . *Beginner's Guide for Data Analysis Using R Programming*. Khanna Publishers
4. Umesh R. Hodeghatta & Umesha Nayak. *Practical Business Analytics Using R and Python*. Pearson India.
5. Seema Acharya & Subhashini Chellappan – *Business Analytics Using Data Mining and R*. Wiley India.
6. R. N. Prasad & Seema Acharya – *Statistical Computing and Data Analysis.* Wiley India

Course Outcomes (COs) with Bloom's K-Levels Mapping

CO No.	Course Outcome Statements	Bloom's K-Levels
CO1	Explain the fundamentals of R programming and the business data environment.	Understand (K2)
CO2	Apply vectors, lists, matrices and data frames for data manipulation in R.	Apply (K3)
CO3	Apply control structures and user-defined functions to build analytical logic in R.	Apply (K3)
CO4	Apply statistical and logical operations in R to analyse business datasets.	Apply (K3)
CO5	Use R visualisation packages to present data and interpret business insights.	Apply (K3)

Subject: Data Visualization and Storytelling

Code: BA03 | Credits: 3 | Total Contact Hours: 40| Type: DSE

Course Objectives

1. To understand the principles of effective data visualization design and develop skills to create meaningful visual representations of data.
2. To develop the ability to interpret and analyse data visualizations for business decision-making.
3. To apply data preparation techniques for ensuring accuracy, consistency, and reliability of visual data.
4. To design dashboards and interactive visual tools for business communication.
5. To develop data storytelling skills for presenting insights to stakeholders in a structured and impactful manner.

Course Contents

Module I: Introduction to Data Visualization (8 Hours)

Meaning, scope, and importance of data visualization in business; evolution of visualization techniques; role of data visualization in decision-making; types of data (categorical, numerical, temporal); visualization types based on data; principles of visual perception; Gestalt principles; cognitive aspects of data interpretation.

Module II: Data Preparation for Visualization (8 Hours)

Data cleaning and preprocessing techniques; handling missing values and outliers; data transformation and standardisation; data merging and integration; sampling techniques; data reduction methods; data quality assessment; bias in data and ethical considerations; ensuring transparency and accuracy in visual reporting.

Module III: Basic Data Visualization Techniques (9 Hours)

Bar charts, column charts, and variations; line and area charts for trends; pie and donut charts for proportions; scatter plots for relationships; bubble charts for multivariate analysis; histograms and box plots for distribution; heatmaps for pattern detection; treemaps and network graphs; flow diagrams and process visualizations; geographic and spatial data visualization; introduction to waterfall, radar, and spider charts.

Module IV: Dashboards and Interactive Visualization (8 Hours)

Concept of dashboards in business intelligence; static vs interactive dashboards; dashboard design principles; KPIs and metrics visualization; filters, slicers, and parameters; drill-down and drill-through analysis; tools for dashboard creation (Excel/Tableau/Power BI – conceptual introduction); dashboard storytelling structure; real-time data visualization concepts.

Module V: Data Storytelling and Business Communication (7 Hours)

Concept of data storytelling; components of a data story (context, insight, narrative, visual); structuring business presentations using data; storytelling frameworks; combining visuals with narrative flow; persuasive communication using data; addressing stakeholder queries.

Practical Exercises

1. Clean a dataset by handling missing values and outliers.
2. Create basic charts like bar, line, pie, and scatter using Excel.
3. Use histogram and box plot to study data distribution.
4. Build a simple dashboard with KPIs and filters.
5. Present a short data story using visuals and insights.

Suggested Readings (Latest Edition)

1. Cole Nussbaumer Knaflic – Storytelling with Data: A Data Visualization Guide for Business Professionals. Wiley.
2. Lindy Ryan – *Visual Data Storytelling with Tableau*
3. Edward Tufte – *The Visual Display of Quantitative Information*
4. Stephen Few – *Information Dashboard Design*
5. Alberto Cairo – *The Functional Art: An Introduction to Information Graphics and Visualization*

Course Outcomes (COs) with Bloom's K-Levels Mapping

CO No.	Course Outcome Statements	Bloom's K- Levels
CO1	Explain the concepts, principles and importance of data visualisation and storytelling in business.	Understand (K2)
CO2	Apply data preparation techniques to make business datasets ready for visualisation.	Apply (K3)
CO3	Apply appropriate visualisation techniques to represent different types of business data.	Apply (K3)
CO4	Prepare dashboards and interactive visualisations using suitable tools.	Apply (K3)
CO5	Apply storytelling principles to present visual outputs that support managerial decisions.	Apply (K3)

Subject : Data Analytics with Python

Code: BA04 | Credits: 3 | Total Contact Hours: 40| Type: DSE

Course Objectives

1. To understand the fundamentals of Python programming for data analytics.
2. To apply Python libraries for data manipulation, cleaning, and transformation.
3. To perform exploratory data analysis (EDA) on business datasets.
4. To use statistical tools and techniques for business decision-making.
5. To evaluate the data visualisations and interpret insights for managerial applications.

Course Contents

Module I: Introduction to Python for Data Analytics (8 Hours)

Introduction to Python; installation and working environment; Python syntax and semantics; variables, data types, operators; input/output operations; control flow basics; introduction to data analytics and its role in business decision-making; overview of Python libraries used in analytics.

Module II: Data Structures and Data Handling in Python (7 Hours)

Lists, tuples, sets, and dictionaries; indexing and slicing; operations on data structures; introduction to NumPy arrays; array operations and mathematical functions; handling structured and unstructured data; reading and writing datasets (CSV, Excel); introduction to Pandas library.

Module III: Data Manipulation with Pandas (9 Hours)

DataFrames creation and operations; importing and exporting data; data cleaning and preprocessing; handling missing values; filtering, sorting, grouping, and aggregation; merging and joining datasets; data transformation techniques; business dataset preparation.

Module IV: Exploratory Data Analysis (EDA) and Statistics (9 Hours)

Descriptive statistics (mean, median, mode, variance, standard deviation); correlation and covariance; distribution analysis; outlier detection; pivot tables; trend analysis; basic hypothesis understanding; business interpretation of statistical results.

Module V: Data Visualization and Business Applications (7 Hours)

Data visualization using Matplotlib and Seaborn; bar charts, line charts, histograms, scatter plots, and box plots; customization of graphs; dashboard basics; storytelling with data; applications of Python analytics in marketing, finance, HR, and operations; case-based business analytics.

Practical Activities

1. Python installation and demonstration of coding
2. Data cleaning and manipulation using Pandas
3. Performing EDA on business datasets
4. Creating statistical summaries and interpreting results
5. Building visualisations using Matplotlib and Seaborn

Suggested Readings (Latest Edition)

1. Bharti Motwani. *Data Analytics Using Python*. Wiley India
2. Umesh R. Hodeghatta & Umesha Nayak. *Practical Business Analytics Using R and Python*. Pearson India
3. Wes McKinney. *Python for Data Analysis*. O'Reilly Media
4. Jake VanderPlas. *Python Data Science Handbook*. O'Reilly Media
5. Amit Kumar Das. *Data Science and Analytics Using Python*. McGraw Hill Education India

Course Outcomes (COs) with Bloom's K-Levels Mapping

CO No.	Course Outcome Statements	Bloom's K- Level
CO1	Explain the fundamentals of Python programming for data analytics.	Understand (K2)
CO2	Apply Python data structures and libraries for data handling.	Apply (K3)
CO3	Apply Pandas and statistical functions to analyse business datasets.	Apply (K3)
CO4	Apply exploratory data analysis techniques to business data.	Apply (K3)
CO5	Use Python visualisation libraries to present data and interpret business insights.	Apply (K3)

Subject: Social Media and Web Analytics

Code: BA05 | Credits: 3 | Total Contact Hours: 40| Type: DSE

Course Objectives

1. To understand social media marketing concepts and planning
2. To use social media platforms for marketing communication
3. To apply analytics tools for performance measurement
4. To understand PPC advertising and campaign tracking
5. To use web analytics tools for business decision-making

Course Contents

Module I: Introduction to Social Media Marketing (8 Hours)

Meaning and role of social media in marketing; digital marketing ecosystem; rules of engagement in social media; target audience identification; influencers and content strategy; development of social media marketing plan; blogging, microblogging, social networks, video sharing, podcasts, live streaming, webinars; use of blogs for branding and lead generation; introduction to blog analytics.

Module II: Social Media Platforms and Content Strategy (9 Hours)

Overview of major platforms: Facebook, Instagram, LinkedIn, Twitter, YouTube; content types and engagement strategies; social bookmarking and collaboration tools; picture sharing and video marketing; content planning and scheduling; virality and engagement metrics; online reputation management basics.

Module III: Social Media Analytics and Metrics (7 Hours)

Introduction to social media analytics; key performance metrics (reach, impressions, engagement rate, CTR, conversions); social media monitoring tools; sentiment analysis and brand monitoring; performance tracking techniques; introduction to analytics tools for social platforms.

Module IV: PPC Advertising and Campaign Measurement (8 Hours)

Introduction to Pay-Per-Click (PPC) marketing; Google Ads structure; Facebook Ads structure; CPC, CTR, CPA concepts; keyword research basics; SEO vs PPC keywords; bidding strategies and quality score; ad performance optimization; conversion tracking; call-to-action (CTA); campaign reporting and performance analysis.

Module V: Web Analytics and Google Analytics (8 Hours)

Introduction to web analytics and importance in business; key website metrics (page views, visits, bounce rate, conversion rate); traffic sources (organic, direct, referral, paid); introduction to Google Analytics; account setup and tracking code; dashboard overview; real-time, audience, acquisition, behaviour and conversion reports; interpretation of web analytics data.

Suggested Readings (Latest Edition)

2. Barker et al. *Social Media Marketing: A Strategic Approach*. Cengage
3. Tuten & Solomon. *Social Media Marketing*. SAGE
4. Puneet Singh Bhatia. *Fundamentals of Digital Marketing* (Pearson India)
5. Feras Alhlou et al. *Google Analytics Breakthrough*

Course Outcomes (COs) with Bloom's K-Levels Mapping

CO No.	Course Outcome Statements	Bloom's K- Levels

CO1	Explain the role of social media in marketing and the fundamentals of web analytics.	Understand (K2)
CO2	Apply social media analytics tools to track engagement, reach and campaign performance.	Apply (K3)
CO3	Apply web analytics techniques to examine user behaviour and marketing effectiveness.	Apply (K3)
CO4	Prepare social media plans and basic web analytics reports using key metrics.	Apply (K3)
CO5	Apply PPC, SEO and Google Analytics measures to assess digital marketing performance.	Apply (K3)

Subject: Introduction to Predictive Analytics

Code: BA06 | Credits: 3 | Total Contact Hours: 40| Type: DSE

Course Objectives

1. To understand the fundamental concepts of predictive analytics in business.
2. To apply statistical and forecasting techniques for business prediction.
3. To analyse datasets to identify trends and patterns for decision-making.
4. To develop basic predictive models for business problems.
5. To understand introductory machine learning concepts for predictive applications.

Course Contents

Module I: Introduction to Predictive Analytics (8 Hours)

Meaning, scope, and importance of predictive analytics in business; types of analytics (descriptive, diagnostic, predictive, prescriptive); data-driven decision-making; overview of data mining concepts; structured and unstructured data; applications in marketing, finance, HR, and operations.

Module II: Data Preparation and Exploratory Analysis (8 Hours)

Data collection and cleaning; handling missing values and outliers; data transformation and normalization; exploratory data analysis (EDA); correlation and pattern identification; data visualization for insights; introduction to business datasets used in predictive analytics.

Module III: Statistical Foundations for Prediction (8 Hours)

Measures of central tendency and dispersion; probability concepts; correlation and regression analysis; simple linear regression; introduction to multiple regression; hypothesis building; interpretation of statistical outputs; basics of forecasting techniques.

Module IV: Predictive Modelling Techniques (7 Hours)

Concept of predictive modelling; classification and regression models; decision tree basics; clustering overview; model training and testing; overfitting and underfitting; model evaluation techniques (accuracy, precision, recall).

Module V: Applications of Predictive Analytics (9 Hours)

Applications of predictive analytics in business: customer behaviour prediction, demand forecasting, financial risk prediction, HR attrition analysis, and supply chain forecasting; Introduction to machine learning: meaning and scope; relationship between predictive analytics, statistics, and machine learning; supervised and unsupervised learning (basic concepts); simple machine learning workflow (data → model → prediction → evaluation). Business applications of machine learning in marketing, finance, HR, and operations; ethical issues including bias, fairness, transparency, and data privacy; future trends in AI-driven predictive systems.

Course Outcomes (COs) with Bloom's K-Levels Mapping

CO No.	Course Outcome Statements	Bloom's K- Levels
CO1	Explain the fundamental concepts of predictive analytics and its role in business decision-making.	Understand (K2)
CO2	Identify and interpret the types of business data used in predictive modelling.	Understand (K2)
CO3	Apply basic statistical and analytical techniques to forecast business outcomes.	Apply (K3)
CO4	Apply predictive modelling techniques such as regression and classification to business datasets.	Apply (K3)
CO5	Apply predictive analytics results to managerial decisions in marketing, finance and operations.	Apply (K3)

SPECIALISATION GROUP– INTERNATIONAL BUSINESS

Subject : International Trade Policy and Strategy

Code: IB01 | Credits: 3 | Total Contact Hours: 40| Type: DSE

Course Objectives

1. To develop an understanding of the evolution, objectives, and regulatory framework of international trade policy.
2. To familiarise students with import-export regulations, trade barriers, and policy instruments.
3. To examine export promotion measures and institutional mechanisms supporting international trade.
4. To analyse the strategic implications of trade policies for business organisations operating in global markets.
5. To develop awareness of contemporary issues and challenges in international trade.

Course Contents

Module I: Foundations of International Trade Policy (8 Hours)

International trade and its significance in economic development; Direction and composition of India's exports and imports; Theories and rationale of international trade policy; Objectives and features of India's Foreign Trade Policy; Legal and institutional framework governing foreign trade; Historical evolution of India's trade policy since economic liberalisation; Emerging trends in global trade and international business.

Module II: Import Policy and Trade Regulation (8 Hours)

Structure and objectives of import policy; Instruments of import regulation; Import licensing systems and procedures; Open General Licence (OGL) and automatic licensing; Import substitution and trade protection measures; Tariff structures and tariff classifications; Bound tariffs and quantitative restrictions; Anti-dumping duties, countervailing duties and safeguard measures; WTO provisions relating to import regulation and market access.

Module III: Export Promotion and Trade Competitiveness (9 Hours)

Export-led growth and trade-driven economic development; Evolution of export promotion policies in India; Export promotion schemes and incentives; Duty drawback and export facilitation measures; Export Promotion Capital Goods (EPCG) Scheme; Deemed exports and export financing support; Current Foreign Trade Policy and export strategies.

Module IV: International Trade Institutions and Trade Facilitation (8 Hours)

Regulatory framework under FEMA; Role and functions of the Directorate General of Foreign Trade (DGFT); Export Promotion Councils (EPCs); Commodity Boards and Export Development Authorities; Functions of APEDA and MPEDA; Export Houses and Trading Houses; Export Processing Zones (EPZs); Foreign Trade Zones (FTZs); Software Technology Parks (STPs); Institutional mechanisms for trade facilitation and export development.

Module V: Strategic Trade Management and Emerging Issues (7 Hours)

Special Economic Zones (SEZs); Export-Oriented Units (EOUs); Agri Export Zones (AEZs); Regional Trade Agreements (RTAs) and Free Trade Agreements (FTAs); Trade facilitation and ease of doing business initiatives; Sustainability issues in international trade; Digital trade and cross-border e-commerce; Geopolitical developments and global supply chain disruptions.

Course Outcomes (COs) with Bloom's K-Levels Mapping

CO No.	Course Outcome Statements	Bloom's K-Levels
CO1	Explain the concepts, objectives and institutional framework of international trade policy.	Understand (K2)
CO2	Describe import regulations, tariffs and non-tariff barriers and their effect on business operations.	Understand (K2)
CO3	Apply export promotion schemes and incentives to the trade situations of Indian firms.	Apply (K3)
CO4	Explain the role of trade institutions, regulatory authorities and trade facilitation mechanisms.	Understand (K2)
CO5	Apply trade policy concepts to contemporary global trade issues and business cases.	Apply (K3)

Subject : International Supply Chain Management

Code: IB02 | Credits: 3 | Total Contact Hours: 40| Type: DSE

Course Objectives

1. To develop an understanding of supply chain management concepts, processes, and strategies in international business.
2. To examine the drivers and enablers of global supply chain performance and competitiveness.
3. To understand global procurement, sourcing, and supplier management practices.
4. To analyse inventory management, logistics, and transportation decisions in international supply chains.
5. To evaluate contemporary challenges and technological developments in global supply chain management.

Course Contents

Module I: Foundations of Supply Chain Management (7 Hours)

Objectives and functions of international supply chain; Components and participants of international supply chains; Decision phases in international supply chain management including strategic, tactical and operational decisions; Process views of supply chains including cycle view and push-pull view.

Module II: Global Supply Chain Operations and Strategy (9 Hours)

Overview of global trade and international supply chains; Characteristics of global supply chain networks; Emerging markets and global sourcing opportunities; Strategic benefits of global supply chains; Supply chain drivers including inventory, transportation, information, sourcing, facilities and pricing; Supply chain responsiveness and efficiency; Trade-offs between efficiency and responsiveness; Global value chains and supply chain competitiveness; Risk and resilience in international supply chain operations.

Module III: Global Procurement and Supplier Management (8 Hours)

Global purchasing and sourcing strategies; Transition from international purchasing to global procurement; Outsourcing and offshoring strategies; Supplier selection and evaluation criteria; Supplier relationship management; Designing global supplier networks; Supplier performance measurement and monitoring; E-procurement and digital sourcing platforms; Supplier negotiations, auctions and contract management; Ethical and sustainable sourcing practices.

Module IV: Inventory Management and International Logistics (8 Hours)

Role and importance of inventory in supply chains; Types of inventories and inventory-related costs; Inventory planning and control techniques; Production lot sizing decisions; Lot sizing under capacity constraints; Inventory aggregation and risk pooling; Quantity discounts and economies of scale; International logistics management; Warehousing and distribution management; Role of logistics service providers in global supply chains.

Module V: Transportation, Technology and Emerging Trends in Supply Chains (8 Hours)

Modes of transportation in international trade including road, rail, air, sea and multimodal transport; Selection of transportation modes and cost considerations; Role of ports, inland container depots and logistics infrastructure; International freight forwarding and customs procedures; Artificial Intelligence, Internet of Things (IoT) and Blockchain in supply chains; Sustainable and green supply chain practices.

Course Outcomes (COs) with Bloom's K-Levels Mapping

CO No.	Course Outcome Statements	Bloom's K-Levels
CO1	Explain the concepts, processes and strategic importance of supply chain management in global business.	Understand (K2)
CO2	Apply sourcing and procurement strategies to improve global supply chain performance.	Apply (K3)
CO3	Apply inventory management techniques to international supply chain situations.	Apply (K3)
CO4	Apply logistics and transportation decision techniques to global supply chains.	Apply (K3)
CO5	Explain emerging technologies, risks and sustainability challenges in international supply chains.	Understand (K2)

Subject: Export-Import Policy and Documentations

Code: IB03 | Credits: 3 | Total Contact Hours: 40| Type: DSE

Course Objectives

1. To understand the fundamentals of export-import trade and international business.
2. To familiarize students with export procedures, documentation, and regulatory requirements.
3. To examine the role of export promotion institutions and trade support organizations.
4. To understand export financing, payment methods, and trade risk management.
5. To develop skills for managing export transactions and global trade operations effectively.

Course Contents

Module I: Introduction to EXIM Policy and International Trade (7 Hours)

Concept, scope, and significance of international trade; role of exports and imports in economic development; composition and trends of India's foreign trade; theories of international trade; features and rationale of export business; export-import policy framework in India; essentials for starting an export business; exporter registration requirements; opportunities and challenges in global trade; contemporary developments in India's foreign trade policy.

Module II: Export Procedures and Documentation (9 Hours)

Export procedures and stages in export transactions; registration of exporters; export documentation and its significance; principal export documents including commercial invoice, customs invoice, consular invoice, packing list, certificate of origin, certificate of inspection, bill of lading, airway bill, shipping bill, GR form, SDF form, and PP form; customs clearance procedures; insurance cover and export cargo protection; role of Export Credit Guarantee Corporation (ECGC); quality control and pre-shipment inspection; HS classification and coding system.

Module III: Institutional Support and Export Promotion Framework (8 Hours)

Export promotion infrastructure in India; role and functions of Export Promotion Councils (EPCs); Export Promotion Zones (EPZs); Special Economic Zones (SEZs); Federation of Indian Export Organisations (FIEO); Agricultural and Processed Food Products Export Development Authority (APEDA); Directorate General of Foreign Trade (DGFT);trade facilitation measures; government initiatives for export promotion; digital platforms supporting exporters.

Module IV: Export Financing and International Payment Systems (8 Hours)

Concept and importance of export finance; pre-shipment finance and post-shipment finance; role and functions of EXIM Bank; methods of payment in international trade including cash-in-advance, letters of credit, documentary collections, open account, and consignment sales; bills of exchange and trade credit instruments; export credit insurance and risk mitigation; export pricing considerations.

Module V: INCOTERMS, Trade Risk Management and Contemporary Practices (8 Hours)

INCOTERMS 2020: meaning, significance, and classification; obligations of buyers and sellers under major INCOTERMS; international logistics and shipment coordination; export risk management; legal and regulatory compliance in export trade; digitalization of export processes; sustainability and ethical practices in international trade.

CO3	Describe the role of export promotion institutions and trade facilitation agencies.	Understand (K2)
CO4	Apply export financing options and international payment methods to trade transactions.	Apply (K3)
CO5	Apply INCOTERMS and trade risk management practices to export-import situations.	Apply (K3)

Subject: International Ventures, Mergers & Acquisitions

Code: IB04 | Credits: 3 | Total Contact Hours: 40| Type: DSE

Course Objectives

1. To understand the various modes of international business expansion and foreign investment.
2. To examine the formation, management, and challenges of international joint ventures and strategic alliances.
3. To analyse the strategic, financial, and organizational aspects of mergers, acquisitions, and takeovers.
4. To understand valuation methods and financial considerations in M&A transactions.
5. To develop the ability to evaluate international growth opportunities and post-merger integration strategies.

Course Contents

Module I: International Business Expansion and Foreign Investment (8 Hours)
Internationalization of business; motives for international expansion; routes to international business including exporting, licensing, franchising, contract manufacturing, management contracts, turnkey projects, wholly owned subsidiaries, strategic alliances, joint ventures, mergers and acquisitions; factors influencing market entry decisions; stages of internationalization; concept of foreign direct investment (FDI).

Module II: International Joint Ventures and Strategic Alliances (8 Hours)
Concept, characteristics, and objectives of international joint ventures; strategic alliances and collaborative arrangements; motives and types of joint ventures; partner selection and evaluation; legal, financial, and operational aspects of joint venture management.

Module III: Mergers, Acquisitions and Corporate Restructuring (8 Hours)
Concept and significance of mergers, acquisitions, divestitures, and demergers; strategic motives for M&A; theories and types of mergers and acquisitions; stages in the M&A process; takeover strategies and takeover bids; reverse mergers; concepts of corporate restructuring and business reorganization.

Module IV: Cross-Border Mergers and Post-Merger Integration (9 Hours)
Cross-border mergers and acquisitions; strategic analysis using SWOT analysis, BCG Matrix, and Porter's Five Forces Model; legal, regulatory, financial, and cultural issues in international M&A; due diligence process; integration planning and implementation; organizational and human resource issues in mergers.

Module V: Valuation and Financial Analysis in Mergers and Acquisitions (7 Hours)
Principles of business valuation; factors affecting valuation; Discounted Cash Flow (DCF) approach; economic value added (EVA); asset-based and market-based valuation methods; sensitivity analysis; synergy valuation.

Subject: Global Business Environment

Code: IB05 | Credits: 3 | Total Contact Hours: 40| Type: DSE

Course Objectives

1. To develop an understanding of globalization and its impact on business activities worldwide.
2. To examine the political, economic, socio-cultural, technological, environmental, and legal dimensions of the global business environment.
3. To analyse the role of international organizations and trade agreements in facilitating global commerce.
4. To evaluate opportunities and challenges arising from regional and global economic integration.
5. To develop strategic perspectives for managing business operations in international markets.

Course Contents

Module I: Introduction to Global Business Environment (8 Hours)

Concept, nature and scope of global business; Evolution of globalization and international business; Major phases of global economic integration; Drivers of globalization including technology, trade liberalization, transportation and communication; Multinational Enterprises (MNEs) and Transnational Corporations (TNCs).

Module II: Dimensions of Global Business Environment (8 Hours)

Overview of the PESTEL framework; Political environment and government policies affecting business; Political stability, geopolitical risks and international relations; Economic environment including economic growth, inflation, exchange rates and business cycles; Socio-cultural environment comprising demographics, culture, consumer behaviour and diversity; sustainability and climate-related business challenges; intellectual property rights and compliance requirements.

Module III: International Institutions and Global Trade Governance (9 Hours)

General Agreement on Tariffs and Trade (GATT) and its evolution; World Trade Organization (WTO): objectives, principles, structure and functions; WTO agreements and trade disciplines; International Monetary Fund (IMF) and its role in global financial stability; World Bank Group including IBRD and IDA; International Finance Corporation (IFC); Organization for Economic Cooperation and Development (OECD); Asian Development Bank (ADB) and their contributions to international development and trade; Impact of latest geopolitical issues.

Module IV: Regional Economic Integration and Trade Blocs (8 Hours)

Concept and evolution of regional economic integration; Forms of regional economic cooperation and integration; Regional Trade Agreements (RTAs); Economic and strategic significance of regional trade blocs; European Union (EU); Association of Southeast Asian Nations (ASEAN); Benefits and challenges of regional integration; Globalism versus regionalism in international business; Impact of latest geopolitical issues.

Module V: Contemporary Issues in Global Business (7 Hours)

Emerging trends in global business and trade governance; Digital economy and cross-border e-commerce; Sustainability and responsible business practices; Corporate social responsibility in global markets; Geopolitical tensions and their impact on business; International business risks and risk management strategies; Challenges and opportunities for Indian companies in global markets.

INTERNSHIP

Guidelines

1. After the completion of the Third year (Sixth Semester), each student shall undergo an Internship of 4–6 weeks in a manufacturing, service, financial, government, start-up, NGO, or any other approved organization. The internship shall be evaluated, and the credits shall be awarded in the Seventh Semester.
2. The internship shall provide students with practical exposure to organizational operations, managerial practices, and a live business problem/project.
3. One supervisor of the organisation will be assigned under which the student will complete the internship. A faculty guide from department will also be assigned to monitor the progress of the internship through periodic reviews and interaction with the student and organization.
4. During the internship, the student will study functioning of the organisation and the organization shall assign a project/problem as appropriate to the organizational requirements.
5. Students shall maintain a Daily Work Diary/Internship Logbook duly certified by the supervisor of the organisation. It will be submitted with Internship Project Report
6. On completion of the internship, the student shall submit an Internship Project Report to the department on or before September 30 along with certificate of completion of internship from organisation.
7. The report shall include organizational profile, products & services, project objectives, methodology, analysis, findings, recommendations, limitations, and conclusions.
8. The report shall be prepared using A4 size paper, 12-point Times New Roman, 1.5 line spacing, and should ordinarily contain 80–100 pages, excluding annexures.
9. The report shall include:
    a. Cover Page
    b. Certificate from the Organization
    c. Certificate from Faculty Guide
    d. Declaration by the Student
    e. Acknowledgement
    f. Executive Summary
    g. Table of Contents
    h. List of Tables/Figures
    i. Chapters
    j. References (APA Style)
    k. Annexures
11. After completion of internship, every student shall make a formal presentation before the class and internal panel of faculty member.

Evaluation Scheme

1. The Internship shall carry a total of 100 marks. Out of these, 70 marks shall be awarded through external evaluation conducted jointly by two examiners—one External Examiner and one Internal Examiner. The External Examiner shall be appointed by the University. The external evaluation shall comprise:
    - Evaluation of the Internship Project Report, and

- Viva Voce Examination.

The final external evaluation marks shall be the average of the marks awarded by the two examiners.

2. The remaining 30 marks shall constitute the Internal Assessment as sessional, which shall be awarded by the Faculty Guide (Internal) based on the student's presentation and performance before the class.
3. The suggestive parameters for the external evaluation (70 marks) shall include the student's understanding of the organization, understanding of the objectives, relevance of the problem/project assigned, quality of the internship project report, and performance in the Viva Voce examination.
