The **Student Induction Programme** (SIP), initiated by the All India Council for Technical Education (AICTE), is designed to help newly admitted students in technical institutions transition smoothly into the higher education environment. It aims to familiarize students with the institutional culture, foster connections with peers and faculty, and provide a foundation for holistic learning. Activities under SIP may include Physical Activities, Creative Arts, Universal Human Values, Literary Events, Proficiency Modules. Lectures shall be by Eminent Personalities, Local Area Visits, Department/Branch Familiarization, and Innovation-related sessions.

AICTE Activity Points Requirement for B.Tech. Programmes

As per AICTE guidelines (refer Chapter 6 – *AICTE Activity Point Program, Model Internship Guidelines*), in addition to academic requirements, students must earn a specified number of Activity Points to be earned is to be eligible for the award of their degree.

- **Regular** students admitted to a 4-year degree program must earn **100 Activity Points**.
- **Lateral** entry students (joining from the second year) must earn **75 Activity Points**.
- **Students** transferred from other universities directly into the fifth semester must earn **50 Activity Points** from the date of entry into AKTU.

These Activity Points are **non-credit** and will not be considered for **the SGPA/CGPA** or be used for **vertical progression**. However, they are mandatory for the **award of the degree**, and the points earned will be reflected on the **eighth semester Grade Card**.

TX Stream

The hours spent for earning the activity points shall not be counted for regular attendance requirements. Students can accumulate these points at any time during their program, including on weekends, holidays, and vacations starting from the year of admission, provided they meet the minimum hours of engagement prescribed for each activity. If a student fails to earn the required Activity Points, the eighth-semester Grade Card will be withheld until the requirement is fulfilled. Consequently, the degree will be awarded only after the Grade Card has been released

TX Stream

Course Code	**AAS101I/AAS201I**
Title of the Course	Physics of Fibres and Textile Materials
L-T-P	3-0-0
Total Credits of the Course	03
NCrF Hours	45

Main Focus of the Course Outcomes

Employability	Skill Development	Entrepreneurship
✓	✓	✓

Course Objectives:

1. To understand the foundational concepts and principles of quantum mechanics.
2. To comprehend the principles and applications of wave optics.
3. To apply the laws of thermodynamics and the principles of heat transfer and explain the electrical behavior of conductors, semiconductors, and insulators.
4. To design and analyze ultrasonic and photonics systems for textile applications.
5. To explore the fundamental properties and phenomena of superconductivity and diverse applications of nano-materials, in advanced technological contexts.

Course Content

Unit	**Description**	**Weightage**
1.	**Unit I – Fundamentals of Quantum Mechanics** Inadequacy of classical mechanics, de-Broglie concept of matter waves, Davisson and Germer experiment, wave packet, phase velocity, group velocity, Heisenberg's uncertainty principle and its applications, time-dependent and time-independent Schrodinger wave equations, particle confined in one dimensional box, wave function and its physical interpretation.	20%

TX Stream

2.	**Unit II – Wave Optics** **Interference:** Coherent sources, interference in thin film of uniform and non-uniform thickness, Newton's rings and its applications (wavelength and refractive index). **Diffraction**: Single slit diffraction, diffraction grating, dispersive power and resolving power of grating. **Polarisation:** Unpolarised and polarised light, double refraction, Huygens' explanation of double refraction, Nicol prism-construction and working, optical activity.	20%
3.	**Unit III – Thermal and Electrical Properties** Laws of thermodynamics, heat conduction, convection and radiation, heat capacity, thermal conductivity, band theory of solids, conductors, semiconductors, insulators, dielectric materials, piezoelectricity, ferro-electricity.	20%
4.	**Unit IV – Ultrasonics and Photonics** **Ultrasonics:** Introduction, generation of ultrasonic waves (magnetostriction and piezoelectric methods) and detection, applications in textile industry. **Fiber optics:** Fundamental idea about optical fiber, acceptance angle, acceptance cone, numerical aperture, principle of light propagation in optical fiber. **Laser:** Interaction of radiation with matter (absorption, spontaneous and stimulated emission), main components of a laser system, Ruby laser, He-Ne laser, laser applications in textile industry.	20%
5.	**Unit V – Superconductivity and Nano-materials** **Superconductors:** Temperature dependence of resistivity and critical field in superconducting materials, Meissner effect, Type I and Type II superconductors, persistent current, high temperature superconductors, application of superconductors. **Nano-materials:** Introduction and properties of nano-materials, basic concept of quantum dots, quantum wires and quantum well, application of nano-materials.	20%

Teaching-Learning Methodology

Topics are taught through interactive lectures using blackboard and ICT tools. Fiber and fabric testing demonstrations, case studies on textile material performance, and mini-projects on smart textile design

TX Stream

are incorporated. Course materials from ATIRA, BTRA, and international textile journals supplement classroom teaching.

Course Outcomes (COs)

COs	Course Outcome Statement	KL
CO1	Understand the foundational concepts and principles of quantum mechanics.	K2
CO2	Comprehend the principles and applications of wave optics.	K2
CO3	Apply the laws of thermodynamics and the principles of heat transfer and explain the electrical behavior of conductors, semiconductors, and insulators.	K3
CO4	Solve ultrasonic and photonics systems for textile applications.	K3
CO5	Explore the fundamental properties and phenomena of superconductivity and diverse applications of nano-materials, in advanced technological contexts.	K2

Course Outcomes (COs)

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

- ATIRA and BTRA online technical resources
- Textile Research Journal and Journal of Materials Science online

Additional References

Relevant review articles, research papers, and handouts on latest developments are included.

Back to Course Structure & Evaluation Scheme

TX Stream

Course Code	**AAS102E/ AAS202E**
Title of the Course	Applied Chemistry for Fibres, Polymers and Sustainable Textiles
Total Credits of the Course	03
NCrF Hours	45

Main Focus of the Course Outcomes

Employability	**Skill Development**	**Entrepreneurship**
✓	✓	✓

Course Objectives:

1. To understand the chemical structure and properties of natural and synthetic textile fibers
2. To apply principles of polymer chemistry to analyze fiber formation, modification, and performance
3. To study the chemistry of textile dyeing, printing, and finishing processes
4. To analyze the environmental impact of textile chemicals and apply green chemistry in wet processing
5. To introduce functional and smart textile chemistry including antimicrobial, flame-retardant, and sustainable textile innovations

Course Content

Unit	**Description**	**Weightage**
1.	**Chemistry of Textile Fibres:** Classification of textile fibres; natural fibres (cotton, wool, silk, jute) and their chemical composition; synthetic fibres (nylon, polyester, acrylic); physical and chemical properties of fibres; moisture absorption and swelling; fibre morphology and structure-property relationship.	20%
2.	**Polymer Chemistry and Fibre Formation:** Introduction to polymers; monomers and polymerization; addition and condensation polymerization, copolymerization, step-growth and chain-growth mechanisms, melt, dry, and wet spinning processes, drawing and orientation, fiber	20%

TX Stream

	crystallinity and amorphous regions, chemical modification of fibers (graft copolymerization, cross-linking), recycled and bio-based synthetic fibers (PLA, PHA)	
3.	**Textile Wet Processing Chemistry:** Preparation processes (desizing, scouring, bleaching – chemistry and agents), chemistry of direct, reactive, acid, basic, vat, and disperse dyes, dye-fiber interactions and bonding mechanisms, printing pastes and thickeners, fixation chemistry, after-treatments, water and effluent chemistry in wet processing	20%
4.	**Textile Finishing Chemistry:** Mechanical and chemical finishing principles, softeners (anionic, cationic, silicone-based), anti-wrinkle and easy-care finishes (DMDHEU chemistry), water-repellent finishes (fluorocarbon, C6 vs C8), flame-retardant finishes (halogenated and phosphorus-based), UV protection finishes, nanotechnology in textile finishing	20%
5.	**Sustainable and Functional Textile Chemistry:** Environmental issues in textile industry,Green chemistry in textile processing, biodegradable dyes and natural dyes, enzyme-based processes (amylases, cellulases, proteases), antimicrobial textiles (silver nanoparticles, chitosan, zinc oxide), phase-change materials in textiles, e-textiles chemistry, recycling of textile waste, circular economy in textile industry	20%

Teaching-Learning Methodology

Topics are taught through interactive lectures using blackboard and ICT tools. Laboratory demonstrations on dyeing trials, fiber identification, and finishing experiments are included. Case studies on sustainable textile production and chemical safety (REACH compliance) supplement classroom teaching.

Course Outcomes (COs)

COs	Course Outcome Statement	KL
CO1	Understand the chemical structure and properties of natural and synthetic textile fibers	K2

TX Stream

CO2	Understand polymer chemistry principles to analyze fiber formation and chemical modification	K2
CO3	Implement dye-fiber chemistry and wet processing to optimize textile coloration processes	K3
CO4	Describe finishing chemistry to design functional textile properties such as water repellency and flame retardancy	K2
CO5	Understand green chemistry and sustainable practices to textile processing and functional textile design	K2

CO-PO Articulation Matrix

Back to Course Structure & Evaluation Scheme

TX Stream

Course Code	**AAS103E**
Title of the Course	Calculus and Linear Algebra
Total Credits of the Course	04
NCrF Hours	60

Main Focus of the Course Outcomes

Employability	**Skill Development**	**Entrepreneurship**
✓	✓	✓

Course Objectives:

1. Apply matrix algebra techniques to solve engineering problems related to textile manufacturing, quality control, and CAD applications.
2. Use differential calculus to analyze and optimize fibre properties, textile machine performance, and material behavior.
3. Apply multiple integrals to compute area, volume, and mass in textile materials and manufacturing processes.
4. Understand vector spaces and linear transformations for textile design, quality assessment, and colour analysis.
5. Apply vector calculus concepts to analyze airflow, heat transfer, and fluid flow in textile engineering systems.

Course Content

Unit	**Description**	**Weightage**
1.	**Matrix Algebra:** Introduction to Matrices, Elementary Transformation, Inverse by E-transformation, Rank of a Matrix by Echelon Form, Solution of system of linear Equations by direct method (Gauss Elimination Method), and Iterative method (Gauss Seidel Method), Eigen Values & Eigen Vectors, Diagonalization, **Applications :** Quality control, Computer-Aided Textile (CAD), Finite Element Analysis (FEA)	20%
2.	**Differential Calculus:** Introduction to Limits, continuity and differentiability for function of two	20%

TX Stream

	variables, Partial derivatives, Composite functions, Total derivative, Euler's Theorem for homogeneous functions, Taylor's and Maclaurin's expansion for function of two variables, Jacobians, properties of Jacobian (without proof), Maxima & Minima for a function of up to two variables. **Applications:** Fibre stress and strain analysis, Textile machine design	
3.	**Multiple Integrals**: Evaluation of double and triple integrals, change of order of integration, Change of variable (double -integral).Beta and Gamma functions, Properties of Beta and Gamma function. Dirichlet's Integral. Application of double integrals and Triple Integral to find area and volume. **Applications:** Fabric area and volume calculation, mass calculation	20%
4.	**Vector Spaces:** Vector spaces (over the field of real numbers), Subspaces, Spanning set, Linear independence, Basis and Dimension. Linear transformations, Range and Null space, Rank-Nullity theorem, Matrix of a linear transformation. **Applications:** Fabric structured design, quality control and defect detection, colour analysis and dye matching.	20%
5.	**Vector Calculus:** Scalar point function, Vector point function, Gradient of a scalar field, Directional derivatives, Divergence and curl of a vector function and their application to solenoidal and irrotational vectors respectively. Integration of Vectors, Stokes Theorem and Gauss Divergence Theorem (Without Proof). **Applications:** Airflow through fabrics, Computational Fluid Dynamics (CFD), Heat transfer	20%

Course Outcomes

COs	Course Outcome Statement	KL
CO1	Apply matrix algebra to solve engineering problems in textile quality control and CAD.	**K3**
CO2	Use differential calculus for analysis and optimization in textile engineering.	**K3**
CO3	Apply multiple integrals to compute area, volume, and mass in textile applications.	**K3**

TX Stream

CO4	Use vector spaces and linear transformations in fabric design and quality analysis.	**K3**
CO5	Apply vector calculus to analyze airflow, heat transfer, and fluid flow in textiles.	**K3**

Title of the Course	Calculus and Numerical Method
Total Credits of the Course	04
NCrF Hours	60

Main Focus of the Course Outcomes

Employability	**Skill Development**	**Entrepreneurship**
✓	✓	✓

Course Objectives:

1. Develop the ability to formulate and solve differential equations arising in engineering and scientific applications.
2. Understand and apply Laplace transforms for solving differential equations and analyzing engineering systems.
3. Acquire knowledge of complex variable theory and apply complex analysis techniques to engineering problems.
4. Learn Fourier series and Fourier transforms for the analysis of periodic and non-periodic phenomena in engineering.
5. Develop an understanding of advanced linear algebra concepts and their applications in computational and engineering problems.

Course Content

Unit	**Description**	**Weightage (%)**
1.	**Differential Equations:** Linear differential equation of nth order with constant coefficients, Cauchy-Euler equation, solution of second order linear differential equations with variable coefficient by the method of variation of parameters, change of independent variable, normal form. **Applications:** Modeling heat transfer during textile drying and curing processes, Analysis of fiber stretching and yarn tension during spinning.	20%
2.	**Laplace Transform** Definition of Laplace Transform, Existence Conditions, Linearity Property, Laplace Transform of some standard functions, I and II Shifting theorems (without proof), Change of Scale Property, Laplace transform of derivatives	20%

TX Stream

	and integrals, Periodic Functions, Unit Step Function, Inverse Laplace Transform, Partial Fraction Method, Convolution theorem (without proof), Application of Laplace transform to solve ordinary differential equation. **Applications:** Dynamic analysis of textile machinery and drive systems, Modeling transient heat flow in dyeing and finishing processes.	
3.	**Complex Analysis** Functions of Complex Variables, Limit Continuity and Differentiability, Analytic Function, Cauchy-Riemann Equations (Cartesian and Polar Form), Harmonic Function, Milne-Thomson Method, Complex integrals, Cauchy-Integral theorem (without proof), Cauchy integral formula (without proof), Taylor's series and Laurent's series, Singularities, Residue of a function, Cauchy Residue Theorem, Evaluating the Real definite integrals. **Applications:** Modeling fluid flow around textile fibers during coating and dye penetration, Analysis of electrostatic fields in electrospinning processes.	20%
4.	**Fourier Series & Fourier Transform** Periodic function, even and odd function, Dirichlet's Condition for the Existence of a Fourier Series, Fourier series expansion of a function in the interval c to $c+2l$, Change of Interval, Half Range Series: Half range sine and cosine series in the interval $-l$ to l, Parseval's Identity. Fourier Integral theorem, Fourier transform, Inverse Fourier Transform, Finite Fourier Sin and Cosine transform. **Applications:** Fabric defect detection using frequency-domain image processing, Signal analysis in textile quality monitoring systems.	20%
5.	**Applied Linear Algebra:** Eigen Value Decomposition and Singular Value Decomposition, Matrix factorization, LU Decomposition (Dolittle method), QR Decomposition, Linear transformation, Matrix representation of Linear Transformation, Kernel and Range, Introduction to inner product space, Norm of a vector. **Application:** Principal Component Analysis (PCA) for textile quality inspection, Machine learning for textile defect classification using SVD.	20%

TX Stream

Course Outcomes

COs	Course Outcome Statement	KL
CO1	Solve higher-order linear differential equations using analytical methods and apply them to engineering problems.	**K3**
CO2	Apply Laplace transform techniques to solve ordinary differential equations and analyze dynamic engineering systems.	**K3**
CO3	Solve complex functions, evaluate contour integrals, determine residues, and solve engineering problems using complex variable techniques.	**K3**
CO4	Apply Fourier series and Fourier transform methods to analyze periodic and transient engineering signals and processes.	**K3**
CO5	Apply matrix decompositions, linear transformations, and vector space concepts to solve computational and engineering problems.	**K3**

TX Stream

Course Code	**AEE101B/ AEE201B**
Title of the Course	Fundamentals of Electrical Engineering
Course Category	Engineering Science Course (ESC)
Total Credits	03
NCrF Hours	45

Main Focus of the Course Outcomes

Employability	**Skill Development**	**Entrepreneurship**
✓	✓	✓

Course Objectives

1. Understand basic electrical quantities and apply Ohm's law and Kirchhoff's laws to DC circuits
2. Analyse single-phase AC circuits and understand power factor in the context of industrial loads
3. Understand three-phase power systems used in industrial motors, drives, and process plants
4. Learn how transformers and electrical machines work and how they are selected for industrial use
5. Apply electrical safety knowledge and understand relevant industrial applications.

Course Content

Unit	**Description**	**Weightage**
1.	**Basic Electrical Quantities and DC Circuits:** Basic concepts of Electric charge, current, voltage, resistance, power, and energy; Ohm's law; series and parallel combination of resistors; Kirchhoff's Voltage Law (KVL) and Kirchhoff's Current Law (KCL); Thevenin's theorem (simple concept and problem). simple mesh and nodal analysis.	20%
2.	**Single-Phase AC Circuits and Power:** AC voltage and current — peak, RMS, average values; phasor representation; R, L, and C circuits and their series and parallel connections; admittance and impedance; active power (P), reactive power (Q), apparent power (S); power factor and its significance; power factor correction using shunt	20%

TX Stream

	capacitors; single-phase power measurement using wattmeter.	
3.	**Unit III – Three-Phase Systems:** Three phase power supply and loads, balanced star and delta connections; phase and line voltages and currents; three-phase power; two-wattmeter method.	10%
4.	**Unit IV – Transformers and Electrical Machines:** Working principle of single-phase transformer; EMF equation; voltage and current ratio; losses and efficiency; concept of step-up and step-down transformer; Equivalent circuit and phasor diagram (no load condition). DC motor — types, working principle, back EMF, torque; three-phase induction motor — rotating magnetic field, slip, torque-speed curve, starting (DOL and star-delta).	30%
5.	**Unit V – Electrical Safety and Emerging applications:** Electrical hazards — shock and fire; earthing and grounding; working principle of fuses and circuit breakers; electrical safety in laboratory; Applications: Working of fluorescent lamps; motor used in water pumps, lathe machines; key components of energy bills.	20%

Teaching-Learning Methodology

Taught using interactive lectures, real equipment demonstrations, and industry-relevant examples. Simple numericals directly related to motor loads, power billing, and transformer selection are the focus of tutorials. Short demonstration videos on VFDs, solar installations, and smart meters connect theory to practice.

Course Outcomes (COs)

COs	Course Outcome Statement	KL
CO1	Apply Ohm's law and Kirchhoff's laws to solve DC circuit problems in industrial instrumentation	K3
CO2	Analyse single-phase AC circuits and explain power factor significance for industrial loads	K3
CO3	Analyse three-phase circuits and measure three-phase power in industrial motor systems	K3
CO4	Explain fundamental concepts of transformer and machines	K2

TX Stream

CO5	Remember electrical safety knowledge and understand relevant industrial applications.	K2

TX Stream

Course Code	**AEC101B / AEC201B**
Title of the Course	Fundamentals of Electronics Engineering
Course Category	Engineering Science Course (ESC)
Total Credits	03
NCrF Hours	45

Main Focus of the Course Outcomes

Employability	**Skill Development**	**Entrepreneurship**
✓	✓	✓

Course Objectives:

1. Understand diode and transistor basics sufficient to read and understand electronic circuit diagrams
2. Understand how sensors convert physical quantities into electrical signals
3. Use op-amp-based signal conditioning circuits to process sensor outputs
4. Understand digital basics and how microcontrollers are used in industrial automation
5. Relate electronics to real industrial systems — PLCs, VFD drive electronics, smart sensors, and Industry 4.0

Course Content

Unit	**Description**	**Weightage**
1.	**Diodes, Rectifiers, and Regulated Power Supplies:** p-n junction diode — basic concept, forward bias, reverse bias; diode as a switch and rectifier; half-wave and full-wave bridge rectifier; filter capacitor; Zener diode voltage regulator; LED and photodiode (what they do); applications: DC power supply for control panels and PLC units, indicator LEDs in machinery, photoelectric sensors in conveyor lines, regulated supply for field instruments	20%
2.	**Transistors and Switching Circuits:** BJT — Construction & VI characteristics of BJT, NPN transistor concept; saturation and cut-off (switch operation); transistor driving a relay; Introduction to FETs, MOSFET as a switch	20%

TX Stream

	(basic idea); transistor/MOSFET in PWM motor speed control; optocoupler — concept and use for isolation; applications: transistor relay driver in industrial control circuits, MOSFET in VFD gate drive (concept), optocoupler isolating PLC output from high-power load, solid-state relay (SSR)	
3.	**Sensors, Transducers, and Signal Conditioning:** Types of sensors — temperature (thermistor, PT100, thermocouple), pressure (strain gauge, piezoresistive), displacement (LVDT concept), proximity (inductive, capacitive, IR); Wheatstone bridge for sensor measurement; op-amp as non-inverting amplifier and comparator for signal conditioning; analog signal (4–20 mA, 0–10V) and why it is used in industry; applications: temperature control in chemical reactors, pressure monitoring in process plants, proximity sensor in textile loom, structural tilt sensor in civil engineering	20%
4.	**Digital Basics and Microcontroller Overview:** Logic levels and digital signals; basic gates — AND, OR, NOT, NAND (truth table only); Boolean expression for simple industrial logic (e.g. motor ON when switch A AND NOT emergency stop); ADC concept — converting sensor analog output to digital; microcontroller overview (Arduino/PLC concept) — inputs, outputs, program logic; display devices — LCD and 7-segment (what they show); applications: digital readout of temperature/pressure on plant display, automated ON/OFF control logic, PLC ladder logic concept	20%
5.	**Industrial Electronics and Smart Systems:** Introduction to PLC (Programmable Logic Controller) — what it does, inputs, outputs, ladder logic concept; Variable Frequency Drive (VFD) electronics — rectifier, DC bus, inverter stage (block diagram only); SCADA and HMI — concept of remote monitoring; wireless sensor networks in industry — concept of industrial IoT (IIoT); smart manufacturing electronics — condition monitoring sensor nodes, vibration sensors on motors;	20%

Teaching-Learning Methodology

Topics are taught using interactive lectures, real industrial equipment demonstrations, and short videos. Every topic is directly linked to an ME, CE, CH, or TX application. No deep semiconductor physics — emphasis is on reading circuit blocks, understanding sensor data sheets, and working with automation electronics.

TX Stream

Course Outcomes (COs)

COs	Course Outcome Statement	KL
CO1	Explain diode and rectifier circuit operation and identify their role in industrial power supplies	K2
CO2	Explain transistor and optocoupler operation in switching and isolation circuits	K2
CO3	Select appropriate sensors for physical measurement and apply op-amp signal conditioning	K3
CO4	Interpret digital logic and understand microcontroller/PLC role in industrial automation	K2
CO5	Relate PLC, VFD electronics, and IIoT concepts to smart manufacturing and process control	K2

CO–PO Articulation Matrix

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

Back to Course Structure & Evaluation Scheme

TX Stream

Course Code	**ACS101**
Title	Programming Languages
Course Category	Engineering Science Course (ESC)
Credits	03
NCrF Hours	45
Tools	GCC / Code::Blocks / VS Code + Google Colab / Jupyter

Main Focus of the Course Outcomes

Employability	**Skill Development**	**Entrepreneurship**
✓	✓	✓

Course Objectives:

1. Write, compile, and run programs in C and Python
2. Use variables, operators, and control flow to solve simple problems
3. Write and use functions; understand arrays and basic string operations
4. Get familiar with Python built-in data types
5. Apply Python to a small task in an emerging domain — data, automation, or IoT

Course Content

Unit	**Language**	**Topics**	**Weightage**
1.	C	**Programming Basics (C):** 1. Structure of a C program; compilation and execution 2. Data types, variables, constants, operators (arithmetic, relational, logical) 3. Input/output — scanf/printf in C 4. Type conversion; simple expressions *Real connect: C powers embedded systems, microcontrollers, and OS kernels.*	20%
2.	C	**Decision Making and Control Flow (C):** 1. Control Statements 2. Loops — for, while, do-while; break and continue 3. Functions — definition, call, return; call by value	20%

TX Stream

		4. Recursion — factorial and Fibonacci (simple examples only) *Real connect: Control flow is the brain of every program — from traffic signal logic to drone autopilot decision-making.*	
3.	C	**Advanced Programming Concepts (C):** 1. 1D array — declaration, input, output, traversal 2. Simple operations — find max, min, sum, average 3. Strings in C — gets/puts, strlen, strcpy, strcmp 4. Pointer — concept of address and pointer variable (concept only, not deep) 5. Structures, 6. File Handling *Real connect: Arrays store sensor readings, image pixels, and stock prices. Pointers are the foundation of memory management in embedded systems.*	20%
4.	Python	**Python Introduction:** 1. Why Python — where it is used (AI, Data Science, Web, Automation) 2. Python basics — variables, data types, print, input, operators 3. Python control flow — if/else, for loop, while loop 4. Python functions — def, return, default arguments *Real connect: Python is #1 in AI/ML, Data Science, and automation — same syntax, more power, less boilerplate.*	20%
5.	Python	**Python Data Structures and Emerging Applications** 1. Python list, tuple, dictionary, set — basic operations only 2. File handling — read and write a text file; read a CSV (2–3 lines) 3. Introduction to NumPy — array, mean, simple arithmetic (5 lines) 4. Introduction to Matplotlib — plot a simple line graph (5 lines) 5. One mini-demo — IoT sensor simulation	20%

TX Stream

		Real connect: Python lists power NumPy which powers TensorFlow. Matplotlib plots are used in every engineering report and data science notebook. This unit opens the door to AI, IoT, and Data Science using the same Python basics learnt in Unit IV.	

Tutorial Hour — Week-by-Week Practice Problems

One tutorial hour per week. Students write and run programs. Problems below are the minimum set — teacher may add variants.

Week	Language	Tutorial Problems
1	C	1. Print your name and branch. 2. Add two numbers entered by user. 3. Find area of a rectangle.
2	C	1. Swap two numbers. 2. Check if a number is even or odd. 3. Simple calculator (+, –, ×, ÷) using if-else.
3	C	1. Find the largest of three numbers. 2. Grade calculator (marks → A/B/C/D/F). 3. Day name using switch-case.
4	C	1. Print multiplication table of N. 2. Sum of first N natural numbers using loop. 3. Count digits in a number.
5	C	1. Print prime numbers from 1 to 50. 2. Fibonacci series (first 10 terms). 3. Reverse a number.
6	C	1. Factorial using function. 2. Check palindrome number using function. 3. Find GCD of two numbers.
7	C	1. Recursive factorial. 2. Recursive Fibonacci. 3. Sum of digits using recursion.
8	C	1. Input array of N numbers; find max and min. 2. Compute average of array. 3. Linear search in array.
9	C	1. Count vowels in a string. 2. Reverse a string. 3. Check if string is palindrome.
10	C	1. Write a C program to store 5 numbers in an array and print them in reverse order. 2. Write a C program to perform basic string operations such as finding string length, copying and concatenation.
11	Python	1. Hello World in Python. 2. BMI calculator. 3. Temperature converter (°C ↔ °F). Compare C vs Python syntax.

TXstream

12	Python	1. Grade calculator in Python. 2. Fibonacci using Python loop. 3. Simple calculator using functions in Python.
13	Python	1. List: marks of 5 students — max, min, average. 2. Dictionary: store name and marks of 3 students. 3. Count word frequency in a sentence.
14	Python	1. Write student records to a text file. 2. Read and display the file. 3. Read a small CSV and print rows.
15	Python	1. NumPy: create array, compute mean. 2. Matplotlib: plot a line graph of marks. 3. Mini-demo: simulate 5 IoT temperature readings and plot.

Teaching-Learning Methodology

Lectures are short and concept-focused — every idea is shown with a 3–5 line code example. Tutorial hour is compulsory hands-on coding. Students use GCC/Code::Blocks for C and Google Colab for Python (no installation needed for Python). Live coding and debugging by the teacher are part of every session. Errors are learning opportunities — never skip them.

Course Outcomes (COs)

COs	Course Outcome Statement	KL
CO1	Write, compile, and run C programs using variables, operators, and I/O	K3
CO2	Use control flow and functions in C to solve simple computational problems	K3
CO3	Work with arrays and strings in C and understand pointer concept	K2
CO4	Implement basic operations using Python built-in data structures.	K3
CO5	Apply Python to read files, plot data, and perform a simple emerging domain task	K3

CO–PO Articulation Matrix

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	1	3	–	–	–	–	–	–	1
CO2	3	3	2	2	3	–	–	–	–	–	–	1
CO3	3	2	1	2	3	–	–	–	–	–	–	1
CO4	3	3	2	2	3	–	–	–	–	–	–	1
CO5	3	3	2	2	3	1	1	–	–	–	–	2

TX Stream

Evaluation Pattern

Sr.	Component	Marks	Weightage
1.	Class Tests (CT) — short questions + write a program (C/Python)	15	15%
2.	Teacher's Assessment (TA) — Tutorial performance + Assignments + Quiz	15	15%
3.	End Semester Examination — theory + program writing (both languages)	70	70%

Suggested Textbooks

1. Problem Solving and Programming in C, Sridhar & Hariharan, Pearson
2. Basic Computer Engineering, 2ed, Sanjay Silakari, Rajesh K. Shukla, Wiley & Sons
3. Python Programming, Sridhar, Indumathi & Hariharan, Pearson
4. Let Us C – Yashavant Kanetkar (BPB) — for C basics
5. Python Crash Course – Eric Matthews (No Starch Press) — for Python units

2. Google Colab – colab.research.google.com (free Python + NumPy + Matplotlib, no install)
3. HackerRank – hackerrank.com (C, Python practice, free, auto-graded)
4. NPTEL – Programming in C, IIT Bombay (free video lectures)

Back to Course Structure & Evaluation Scheme

TX Stream

Course Code	**ACS201**
Title of the Course	Essentials of Data Structure
Pre-requisite	ACS101 – Programming Language (C/C++ + Python)
Course Category	Engineering Science Course (ESC)
Credits	02
NCrF Hours	30

Main Focus of the Course Outcomes

Employability	**Skill Development**	**Entrepreneurship**
✓	✓	✓

Course Objectives:

1. Understand data structures and why choosing the right one affects program performance
2. Implement linked list and perform basic insert, delete, and traverse operations
3. Implement stack and queue and apply them to simple real-world problems
4. Apply searching and sorting algorithms and compare their efficiency
5. Understand trees and graphs at a conceptual level with real-world connections

Course Content

Unit	**Language**	**Topics**	**Weightage**
1.	C / Python	**Introduction and Arrays** 1. Data structure — definition, need, classification (linear / non-linear, static / dynamic) 2. Algorithm efficiency — Big O notation: O(1), O(n), O(log n), O(n^2) — concept only 3. Array — insert, delete, search, traverse in C/Python 4. 2D array — matrix addition and transpose *Real connect:NumPy array (AI/ML), image as 2D matrix, sensor data log as array, spreadsheet rows.*	20%

TX Stream

2.	C/Python	**Linked List** 1. Node — data + pointer; why linked list over array 2. Singly linked list — insert (head, tail, position), delete, traverse 3. Doubly linked list — concept and structure only 4. Circular linked list — concept only *Real connect: Browser back/forward = doubly linked list. Music playlist = circular. Python deque = doubly linked list (used in BFS, LRU cache).*	20%
3.	C/Python	**Stack and Queue** 1. Stack — LIFO; push, pop, peek; implementation using array in C/Python 2. Application: balanced parentheses check; function call stack (concept) 3. Queue — FIFO; enqueue, dequeue; implementation using array in C/ Python 4. Application: print spooler; task scheduling queue, Polish Notation *Real connect: Ctrl+Z = Stack. WhatsApp delivery = Queue. Python error traceback IS a call stack. CPU scheduling = queue.*	20%
4.	C/Python	**Searching and Sorting** 1. Linear search, binary search, comparison 2. Bubble sort and insertion sort, Quick Sort and Selection Sort — trace + C/ Python 3. Merge sort — concept and trace only 4. Python built-in sort() and sorted() *Real connect: Binary search in database index. Python sort() uses Timsort. E-commerce ranking, leaderboard, ML data preprocessing = sorting.*	20%
5.	Trace + Python demo	**Trees and Graphs (Concept Level)** 1. Binary tree — terminology (root, leaf, height, level); properties 2. Binary Search Tree — insert, search; inorder/preorder traversal trace 3. Graph — vertex, edge, directed/undirected; adjacency list representation, insertion	20%

TX Stream

		4. BFS and DFS — trace on a small graph (5–6 nodes) *Real connect: File system = tree. BST in database indexing. Google Maps = weighted graph. Social network = graph. Decision Tree in ML = binary tree.*	

Suggested Assignment / Practice Problems (Unit-wise) but not limited to

No Tutorial hour in ACS201. The following problems are assigned as class assignments and self-practice. 2–3 per unit recommended for internal assessment.

Unit	Trace on Paper	Code (C/Python)
I Arrays	1. Trace insertion at index 2 in [10,20,30,40] 2. Trace deletion of element 30 from [10,20,30,40] 3. What is O(log n)? Give one example	1. Input N numbers; find max, min, average 2. Count even and odd in array 3. Remove duplicates from array
II Linked List	1. Draw linked list after inserting 10, 20, 30 at head 2. Trace deletion of node 20 from [10→20→30→NULL] 3. Difference between singly and doubly linked list	1. Create linked list; insert at head; print 2. Insert node at tail 3. Delete node by value
III Stack & Queue	1. Trace push(5), push(10), pop(), push(15) — what is top? 2. Trace enqueue(A,B), dequeue(), enqueue(C) — what is front? 3. Check '({[]})' balanced — show stack trace	1. Stack using array — push and pop 5 elements 2. Queue using array — enqueue and dequeue 3. Balanced parentheses checker
IV Search& Sort	1. Binary search for 35 in [10,20,30,35,40,50] — show steps 2. Bubble sort trace on [64,34,25,12] 3. Insertion sort trace on [5,3,8,1]	1. Linear search and binary search — compare 2. Bubble sort — count swaps 3. Python: sort a list ascending and descending
V Tree & Graph	1. Draw BST after inserting 50,30,70,20,40 2. Write inorder and preorder of above BST 3.	1. BST insert and inorder in python 2. Graph as adjacency list in Python dict 3. BFS using queue in Python (10–15 lines)

TX Stream

	BFS from A on: A-B, A-C, B-D, C-E	

Teaching-Learning Methodology

Draw first, code later — every data structure is shown visually on the board before any code is written. Trace problems on paper before coding. VisuAlgo animations are used in class for sorting and tree/graph traversal. Python is used for quick 5-line demos where it adds clarity. Assignments include both trace and coding tasks for every unit.

Course Outcomes (COs)

COs	Course Outcome Statement	KL
CO1	Explain data structure types and Big O; implement array insert, delete, and search in C/Python	K3
CO2	Implement singly linked list operations and relate to real-world applications	K3
CO3	Implement stack and queue using arrays and apply them to solve simple problems	K3
CO4	Apply linear and binary search; trace and implement bubble and insertion sort	K3
CO5	Trace BST insert and traversal; trace BFS/DFS on a small graph	K2

Evaluation Pattern

Sr. No.	Component	Weightage
1.	Internal Assessment – Class Tests (CT) + Assignments / Quiz (TA)	30%
2.	End Semester Examination — theory + trace problems + short code writing	70%

Suggested Textbooks / Reference Books

TX Stream

Course Code	**AAS104/ AAS204**
Title of the Course	Introduction to Indian Knowledge System
Course Category	Engineering Science Course (ESC)
Total Credits	02
NCrF Hours	30

Main Focus of the Course Outcome

Employability	**Skill Development**	**Entrepreneurship**
✓	✓	

Course Objectives

1. To introduce the meaning, scope, classification and significance of the Indian Knowledge System (IKS) and its corpus.
2. To develop an understanding of India's contributions to philosophy, mathematics, astronomy and the sciences.
3. To familiarise students with indigenous engineering, technology, metallurgy and architecture.
4. To create awareness of Indian traditions of health, wellness, environment, governance and ethics.
5. To expose students to the contemporary relevance of IKS — digital preservation, AI-enabled study and sustainable applications.

Course Content

Unit	**Description**	**Weightage**
1	**Foundations of the Indian Knowledge System** Definition, scope, characteristics and significance of IKS; the IKS vision of NEP 2020; the fourteen (Chaturdasha) Vidyasthanas — four Vedas, four Upavedas and six Vedangas; Schools of Indian Philosophy: Orthodox and Heterodox Schools; Oral and Written Knowledge Systems, Knowledge validation (pramanas). Case study: relevance of IKS for a present-day engineer.	20
2	**Indian Mathematics, Astronomy and Scientific Thinking** Number Systems: Decimal place-value system, zero and infinity; Bhutasankhya and Katapayadi numeration; Pingala's Chandahshastra and binary	20

TX Stream

	representation; Sulbasutras; contributions of Aryabhata, Brahmagupta, Bhaskara and the Kerala School; Indian astronomy and the Panchanga. Numerical: encoding numbers using the Katapayadi scheme/Observing Panchang and Reflecting on the Patterns	
3	**Engineering, Technology and Material Sciences** Metallurgy — Wootz steel, zinc distillation and the Delhi Iron Pillar; town planning and architecture (Harappan, Vastu and Shilpa Shastra); water management — stepwells, tanks and irrigation, textile engineering Case study: materials-science analysis of the Iron Pillar/ Architecture of Stupas	20
4	**Health, Wellness, Environment and Governance** Ayurveda (Charaka and Sushruta), Tridosha; Yoga (Patanjali's Ashtanga) and wellness; environment and sustainability in Indian thought; governance and management — Kautilya's Arthashastra; ethics from the Bhagavad Gita. Case study: Yoga for well-being / Arthashastra management principles/ Learnings from Geeta	20
5	**Contemporary Relevance, AI and Applications of IKS** Digital preservation (CSIR-TKDL, IKS Division) and IPR; Sanskrit and computational linguistics — Panini's Ashtadhyayi, NLP and AI for ancient texts; IKS-inspired sustainable engineering and innovation. Case study: AI/NLP applied to a Sanskrit corpus.	20

Teaching-Learning Methodology

Delivery through interactive lectures, documentaries and IKS Division resources, expert talks, heritage field visits, assignments and a mini-project connecting IKS to a contemporary problem, supported by NPTEL / SWAYAM MOOCs, in line with NEP 2020 and OBE.

Course Outcomes (COs)

COs	Course Outcome Statement	KL
CO1	Learn the nature, scope and classification of the Indian Knowledge System.	K1
CO2	Understand India's contributions to mathematics and astronomy and relate them to modern concepts.	K2

TX Stream

CO3	Understand indigenous engineering, metallurgical and architectural achievements.	K2
CO4	Interpret Indian traditions of health, wellness, governance and ethics.	K2
CO5	Recognize the contemporary relevance of IKS, including AI-enabled study and sustainability.	K2

TX Stream

Course Code	**AAS105 / AAS205**
Title of the Course	Professional Communication and Technical Writing
Course Category	HSMC
Total Credits	02
NCrF Hours	30

Main Focus of the Course Outcomes

Employability	**Skill Development**	**Entrepreneurship**
✓	✓	

Course Objectives

1. Explain the principles of professional communication, workplace etiquette, and business correspondence required for professional environments.
2. Apply verbal, non-verbal, presentation, and AI-assisted communication strategies to communicate effectively in academic and profession.
3. Analyze workplace situations by using emotional intelligence, critical thinking, and ethical decision-making based on Indian Knowledge Systems.
4. Demonstrate leadership, teamwork, interpersonal communication, and collaborative problem-solving skills in diverse professional contexts.
5. Integrate mindfulness, yogic principles, and professional ethics to promote effective communication, personal well-being, and lifelong professional growth.

Unit	**Description**	**Weightage**
1	**Professional Communication and Workplace Readiness** • Fundamentals of communication: definition, process, importance of communication barriers to communication, 7 C's of communication • Business Correspondence : Emails, Notices, Agenda, Minutes of Meeting, Technical Report and proposal • Résumé, CV and Cover Letter Writing	20

TX Stream

	• Interview Skills, Professional Networking and branding e,g.,LinkedIn , X, ATS Score • Digital Communication Etiquette : online presence and virtual meetings **Assignments/Activities** • Prepare a professional résumé and cover letter. • Draft business emails and meeting minutes. • Participate in a mock interview.	
2	**Grammar and Vocabulary for Technical Writing** • Parts of Speech and Sentence Structure • Common Grammatical Errors, Subject–Verb Agreement, Tenses, and Articles • Technical Vocabulary, Word Formation, and Precision in Language • Tone, Style, and Clarity in Technical English • Editing and Proofreading Techniques for Technical Writing • Grammar and Vocabulary Enhancement through Practical Writing Exercises **Assignments/Activities** • Edit and proofread a technical paragraph to improve grammar, vocabulary, precision, and clarity.	20
3	**Public – Speaking, Presentation and AI-Assisted Communication** • Public speaking technique: Modes, verbal, and non-verbal communication • Understating non-verbal Communication through the *Natyashastra*: *Angika Abhinaya* (Body Language: Posture, Gestures, Facial Expressions), *Vachika Abhinaya* (Voice Modulation and Speech Delivery) ,*Sattvika Abhinaya* (Expression of Emotions and Authentic Communication) • Presentation Planning and Delivery • Data Visualization and Slide Design • Elevator Pitch • AI Tools for Presentation Design and Speech Practice, prompt writing for effective communication • Ethical Use of AI in Communication **Assignments/Activities** • Deliver an individual presentation. • Prepare an AI-assisted presentation with proper citations. • Record and evaluate an elevator pitch.	20

TX Stream

4	**Emotional Intelligence and Critical Thinking for Workplace Communication** • Emotional Intelligence through the *Bhagavad Gita* :Self-awareness ,Self-regulation ,Empathy, Emotional Balance • Critical Thinking through Indian Values and Logical Traditions: *Nyaya* (Logical Reasoning), *Viveka* (Discrimination and Judgment), • Value-based Decision Making • Ethical Problem Solving • Reflective Thinking in Professional Contexts **Assignments/Activities** • Case study analysis using value-based decision making. • Reflective journal on emotional intelligence. • Group discussion on workplace ethical dilemmas.	20
5	**Leadership, Workplace Well-being, and Mindful Communication** • Leadership definition and types • Leadership Communication: Active Listening, Constructive Feedback, Teamwork, and Collaboration • Mental Health, Stress Management, and Work-Life Balance • Effective Communication through Yogic Practices: **Yama** as Principles of Ethical Communication **Ahimsa** – Respectful and Non-violent Communication, **Satya** – Truthfulness and Transparency, **Asteya** – Integrity and Honesty, **Brahmacharya** – Responsible and Balanced Communication, **Aparigraha** – Freedom from Ego, Bias, and Possessiveness. **Niyama** for Personal and Professional Growth, **Shaucha** – Clarity of Thought and Communication, **Santosha** – Contentment and Positive Workplace Relationships, **Tapas** – Self-discipline and Professional Commitment, **Svadhyaya** – Self-reflection and Continuous Learning ,**Ishvara Pranidhana** – Purpose, Humility, and Service-oriented Leadership • **Storytelling through Panchatantra:** *The Lion and the Rabbit* (Leadership and Strategic Communication), *The Merchant's Iron Balance* (Emotional Intelligence and Strategic Conflict Resolution), *The Two Fish and the Frog* (Leadership,	20

TXStream

	Vigilance and Decision Making), and *The Merchant and the King's Servant* (Respectful Leadership, Workplace Ethics and Employee Relations).	

Teaching-Learning Methodology	Sessions will be activity-based and interactive, combining short lectures with role-plays, presentations, group discussions, writing tasks and peer review. Audio-visual material, language-lab practice and NPTEL/SWAYAM resources will develop practical communication skills in line with NEP 2020 and OBE.

Course Outcomes (COs)

COs	Course Outcome Statement	KL
CO1	Communicate effectively in professional settings using appropriate verbal, written, and digital communication skills.	K2
CO2	Apply correct grammar and vocabulary to produce clear technical English.	K3
CO3	Design and Deliver effective presentations by applying public speaking techniques and AI-assisted communication tools ethically.	K4
CO4	Apply emotional intelligence, logical reasoning, and value-based decision-making to solve workplace challenges.	K3
CO5	Demonstrate leadership, teamwork, ethical and mindful communication, stress management, and professional well-being for effective and sustainable workplace success.	K6

CO–PO Articulation Matrix

Back to Course Structure & Evaluation Scheme

TX Stream

Course Context: AI is no longer optional — it is the defining technology of this decade. Every engineer, regardless of branch, will work alongside AI tools in their career. This course demystifies AI for first-year students from all streams: what it is, how it works at a concept level, where it is already changing their field, and — most practically — how to communicate with AI systems effectively through Prompt Engineering. No prior programming or mathematics required. Concept, awareness, and hands-on practice are the goals.

Course Code	**AAI101/AAI201**
Title of the Course	Introduction to AI and Prompt Engineering
Course Category	Engineering Science Course (ESC)
Credits	02
NCrF Hours	30
Tools Used	ChatGPT / Claude / Gemini / Copilot (free tier) — browser based

Main Focus of the Course Outcomes

Employability	**Skill Development**	**Entrepreneurship**
✓	✓	✓

Course Objectives:

1. Understand what Artificial Intelligence is, its history, and how it is changing every engineering field
2. Understand key AI concepts — Machine Learning, Deep Learning, and Neural Networks — at a conceptual level
3. Explore how AI is applied across domains — healthcare, agriculture, manufacturing, finance, and education
4. Understand Generative AI — how large language models (LLMs) like ChatGPT and Gemini work
5. Learn and practise Prompt Engineering — the skill of communicating effectively with AI tools to get useful results

Course Content

Unit	**Topics**	**Weightage**
1.	**Introduction to Artificial Intelligence** 1. Definition and scope of AI; brief history — from Alan Turing to ChatGPT 1. Types of AI — Narrow AI, General AI, Super AI (concept)	20%

TX Stream

	2. AI vs Machine Learning vs Deep Learning — what is the difference 3. How machines learn — data, patterns, and predictions (concept, no maths) 4. AI today — where it already exists in daily life (Google Maps, Spotify, Netflix, Google Photos, voice assistants) 5. Machine Learning Concepts, Learning Strategies- Supervised, Unsupervised, Reinforcement Learning 6. Data, Data Visualization, Data Pre-processing **Class Activity: Students list 5 AI tools they use every day and discuss how each one 'learns'.** *Branch connect: CE — AI in structural health monitoring; ME — AI in predictive maintenance; EE — smart grid; CSE — AI in compilers; BT — drug discovery; AG — crop yield prediction.*	
2.	**Core AI Concepts** 1. Machine learning: Classification Techniques- K-Nearest Neighbors (KNN), Naïve Bayes, Clustering Technique-K-Means 2. Classification metrics-accuracy, precision, recall, F1 score, MAE. 3. Neural networks — concept of neurons, layers, weights (simple diagram) 4. Deep learning — what makes it 'deep'; why it needs GPUs, CNN 5. Computer vision — how AI sees images (face recognition, medical imaging) 6. Natural Language Processing (NLP) — how AI understands text and speech **Class Activity: Show Google Teachable Machine (teachablemachine.withgoogle.com) — train a simple image classifier in 5 minutes, no code.** *Branch connect: ECE — image sensors + AI; BT — protein structure prediction (AlphaFold); AG — plant disease detection from photos; TX — fabric defect detection.*	20%
3.	**Generative AI and Large Language Models** 1. What is Generative AI — AI that creates text, images, code, audio, video 2. Large Language Models (LLMs) — what they are, how they are trained (concept)	20%

TXstream

	3. Popular LLMs — ChatGPT (OpenAI), Gemini (Google), Claude (Anthropic), Llama (Meta) 4. Tokens, context window, temperature — simple explanation 5. Multimodal AI — text + image + voice in one model (GPT-4o, Gemini concept) 6. AI image generation — Stable Diffusion, Midjourney, DALL-E (concept + demo) 7. Limitations of LLMs — hallucination, knowledge cutoff, bias 8. Responsible use — academic integrity, plagiarism, AI-generated content disclosure **Class Activity: Students interact with ChatGPT/Gemini/Claude; observe how different inputs give different outputs; identify one hallucination example.** *Every professional today uses at least one Generative AI tool. Understanding how LLMs work makes students better users and future developers.*	
4.	**AI Applications Across Engineering Domains** 1. AI in Civil Engineering — structural health monitoring, smart cities, traffic optimisation 2. AI in Mechanical Engineering — predictive maintenance, design optimisation, robotics 3. AI in Electrical and Electronics — smart grids, fault detection, VLSI design automation 4. AI in CSE — code generation (GitHub Copilot), cybersecurity, natural language interfaces 5. AI in Biotechnology and Healthcare — drug discovery, medical imaging, genomics, wearables 6. AI in Agricultural Engineering — precision farming, crop monitoring, drone-based spraying, soil analysis 7. AI in Chemical and Textile Engineering — process optimisation, quality control, material design 8. Ethical concerns — bias in AI, data privacy, job displacement, responsible AI **Class Activity: One case study per student group — each group presents a 2-minute real AI application from their own engineering branch.** *This unit ensures every student, regardless of branch, sees AI as directly relevant to their future career.*	20%

TXStream

5.	**Prompt Engineering** 1. What is a prompt — the instruction you give to an AI model 2. Why prompt quality matters — same AI, very different results with different prompts 3. Principles of good prompting — clarity, context, specificity, role assignment, format instruction 4. Prompting techniques: • Zero-shot prompting — direct question • Few-shot prompting — give examples in the prompt • Chain-of-thought prompting — ask AI to think step by step • Role prompting — 'Act as a civil engineer and…' 5. Prompt for different tasks — summarisation, explanation, code generation, report writing, brainstorming, translation 6. Domain-specific prompting — students write prompts relevant to their own branch (CE, ME, BT, AG, etc.) 7. AI tools for engineers — GitHub Copilot (code), Grammarly (writing), Consensus (research), Wolfram Alpha, Canva AI, Notion AI **Hands-on Practice (every lecture): Students write prompts, compare outputs, refine and improve. Graded prompt assignment: write 5 prompts for an engineering problem from their own branch.** *Prompt Engineering is already a job role (avg. salary $100K+ globally). Every engineer who can communicate well with AI has a significant career advantage.*	20%

Suggested Assignments / Practice Tasks but not limited to

Assignment	Task
Assignment 1 (Unit I)	Research task — no AI tool interaction required. Find 3 real AI applications in your engineering branch. For each: name the product/system, what data it uses, and what it predicts or generates. Submit as a one-page note (250–300 words).
Assignment 2 (Unit II)	Concept-check task. Pick one real ML-based system relevant to your branch (e.g., a recommendation engine, a defect detector, a chatbot). Identify: (a) Is it supervised, unsupervised, or reinforcement learning? (b) What could cause it to overfit or underfit? (c) Sketch a simple diagram

TX Stream

	showing its inputs, a basic neuron/layer concept, and output. Submit as a half-page note (200–250 words) with diagram.
Assignment 3 (Unit III)	Hands-on task — direct AI interaction required. Interact with any free LLM (ChatGPT/Gemini/Claude). Ask it a question related to your branch. Identify one correct and one incorrect (hallucinated) response. Explain why the hallucination occurred (150–200 words), with screenshots of both responses.
Assignment 4 (Unit IV)	Group case study: Each group (3–4 students) picks one AI application in their domain, prepares a 2-minute presentation covering: problem → data → AI solution → impact. Submit slides/notes plus a 1-page group summary handout.
Assignment 5 (Unit V)	Write 5 prompts for an engineering problem from your branch using: (a) Zero-shot (b) Few-shot (c) Chain-of-thought (d) Role prompting (e) Format-specific prompt. Submit the prompt + AI response + your evaluation of the output quality, as a single document (2–3 pages).
Assignment 6 (Unit V)	Use an AI tool to help complete one academic task (summarise a topic, generate a study plan, explain a concept, translate a text). Document the prompt used, output received, and how you verified/corrected it. In a 200–300 word reflection, address: (a) what you changed or verified and why, and (b) one way AI use in this task could raise a bias, privacy, or academic-integrity concern.

Teaching-Learning Methodology

Every lecture begins with a real-world AI example — a news article, a product demo, or a live tool interaction. No heavy mathematics or programming — concepts are taught through analogies, diagrams, videos, and demonstrations. Unit V (Prompt Engineering) is entirely hands-on — students bring their laptops/phones and write prompts live in class. Group activities, branch-specific case studies, and AI tool explorations keep every session engaging. Teachers are encouraged to use AI tools themselves in class to demonstrate live prompting and critical evaluation of AI outputs.

TX Stream

Course Outcomes (COs)

COs	Course Outcome Statement	KL
CO1	Explain what AI is, its types, and identify AI applications in everyday life and their own engineering domain	K2
CO2	Describe key AI concepts — ML, Deep Learning, NLP, Computer Vision — and relate them to real applications	K2
CO3	Apply the working principles, capabilities, limitations, and responsible use of Generative AI and Large Language Models.	K3
CO4	Apply the concept of Artificial Intelligence across engineering domains and their societal, ethical, and professional implications.	K3
CO5	Design and refine effective prompts using zero-shot, few-shot, chain-of-thought, and role prompting techniques for domain-specific tasks	K3

CO–PO Articulation Matrix

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

Course Code	**AME101C/AME201C**
Title of the Course	Fundamentals of Mechanical Engineering
Course Category	Engineering Science Course (ESC)
Total Credits	02
NCrF Hours	30

Main Focus of the Course Outcomes

Employability	**Skill Development**	**Entrepreneurship**
✓	✓	✓

Course Objectives:

1. To develop an understanding of basic concept of mechanics, and engineering materials for process and textile equipment.
2. To introduce thermodynamics, refrigeration, and heat transfer principles for process heating and cooling applications.
3. To impart knowledge of fluid mechanics, pumps, and compressors used in process and bioprocess fluid systems.
4. To familiarize students with machine elements and fluid power systems used in mechanical transmission applications.
5. To develop an understanding of manufacturing processes for chemical, biomedical, and textile equipment.

Course Content

Unit	**Description**	**Weightage**
1.	**Basic Mechanics and Engineering Materials:** Forces, resultant and equilibrium; stress, strain, Hooke's law and factor of safety; properties and applications of metals, polymers, rubber, ceramics, composites and biomaterials. Applications: materials and structures in chemical, bioprocess and textile equipment.	20%
2.	**Thermodynamics and Heat Transfer:** Thermodynamic system, heat, work and first law; vapour compression refrigeration, refrigeration effect and COP; conduction, convection and radiation. Applications: process heating and cooling, fermenter temperature control, sterilisation, refrigeration and textile drying.	20%

TX Stream

3.	**Pumps, Compressors, and Fluid Systems:** Fluid properties; Bernoulli's equation; centrifugal & reciprocating pumps; priming and pump selection; piston air compressor. Applications: process fluid transport, bioprocess aeration in fermenters, dye-liquor circulation and compressed-air systems.	20%
4.	**Machine Elements:** Fasteners, bearings, shafts, couplings, gears and gear ratio; belt and chain drives; basics of hydraulic and pneumatic systems. Applications: mechanical drives and transmission systems in mixers, centrifuges and textile machinery.	20%
5.	**Chemical, Biomedical Equipment, and Emerging Systems:** Properties and stress–strain behaviour of engineering materials; fundamentals of casting, hot and cold working, and powder metallurgy. Applications: fabrication of bioreactors and process equipment, chemical plant components, porous filters, and textile machinery parts.	20%

Teaching-Learning Methodology

Taught using interactive lectures, chemical equipment videos, and biomedical instrument demonstrations. Every concept is directly linked to textile machinery or biomedical equipment. Case studies, demonstrations, and laboratory exposure will relate concepts to chemical, bioprocess, biomedical, and textile applications.

Course Outcomes (COs)

COs	Course Outcome Statement	KL
CO1	Explain the concept of mechanics, stress–strain, and material properties to process and textile equipment.	K2
CO2	Understand thermodynamic, refrigeration, and heat transfer principles in process thermal systems.	K2
CO3	Explain the concept of fluid principles, pumps, and compressors for process and bioprocess applications.	K2
CO4	Illustrate machine elements and fluid power principles in mechanical transmission systems.	K2
CO5	Understand material properties and manufacturing processes to chemical, biomedical, and textile equipment.	K2

Back to Course Structure & Evaluation Scheme

TX Stream

Course Code	**AAS151/ASS251**
Title of the Course	**Applied Physics Lab**
Total Credits of the Course	01
NCrF Hours	30

Course Objectives

1. To determine the wavelength of monochromatic light, polychromatic light and specific rotation optical instruments.
2. To determine Planck's constant using photoelectric effect, study of attenuation in optical fibre and verification of Stefan's law.
3. To determine the energy band gap and Hall coefficient of semiconductor materials.
4. To investigate the electrical, magnetic and thermal properties of materials and to verify respective fundamental laws.
5. To verify discrete nature of atomic energy transitions by Franck-Hertz experiment and study the switching characteristics of fundamental logic gates.

List of Experiments (Any ten experiments)

S. No.	**Title of Practical**	**Description/Objective**
1.	Diffraction grating	To determine the wavelength of different spectral lines of mercury light using plane transmission grating.
2.	He -Ne Laser	To determine the wavelength of He-Ne laser light using single slit diffraction.
3.	Polarimeter	To determine the specific rotation of cane sugar solution using polarimeter.
4.	Nodal Slide	To determine the focal length of the combination of two lenses separated by a distance and verify the formula for the focal length of combination of lenses.
5.	Planck's constant	To determine Planck's constant using photoelectric effect.
6.	Optical Fiber	To measure attenuation in an optical fiber.
7.	Stefan's Law	To verify Stefan's law by electric method.
8.	Energy Band Gap	To determine the energy band gap of a given semiconductor material.
9.	Hall Effect	To study Hall effect and determine Hall coefficient, carrier density and mobility of a given semiconductor material using Hall effect setup.

TX Stream

10.	Variation of Magnetic Field	To determine the variation of magnetic field with the distance along the axis of a current carrying coil and estimate the radius of the coil.
11.	B-H Curve	To draw hysteresis curve (B-H curve) of a specimen in the form of a transformer and to determine its hysteresis loss.
12.	Carey Foster's Bridge	To determine resistance per unit length and specific resistance of a given resistance using Carey Foster's Bridge.
13.	Electrochemical Equivalent	To determine the electrochemical equivalent (ECE) of copper.
14.	Coefficient of Viscosity	To determine the coefficient of viscosity of a given liquid.
15.	Surface Tension	To measure surface tension of a liquid (e.g., water, ethanol, and surfactant solutions) at room temperature using capillary rise or stalagmometer.
16.	Compound Pendulum	To determine the value of acceleration due to gravity (g) using compound pendulum.
17.	Moment of Inertia	To determine the moment of inertia of a flywheel about its own axis of rotation.
18.	Young's Modulus	To determine the Young's Modulus of a material by Searle's apparatus.
19.	Franck-Hertz Experiment	To determine the first excitation potential of a gas (e.g. Argon) by Franck-Hertz experiment and verify discrete nature of atomic energy transitions.
20.	Solar Cell	To study the characteristics of a solar cell.
21.	Characteristics of Logic Gates	To study the switching characteristics of fundamental logic gates constructed using transistors (BJT/MOSFET), measure propagation delay and power dissipation.

Equipment / Software Required

1. Experimental set-up, inbuilt assembly or specific experiment related apparatus and manuals etc.
2. Light sources, multimeters, rheostat, keys and other required materials.

Teaching-Learning Methodology

Each laboratory session begins with a brief pre-lab discussion connecting the experiment to the corresponding objectives. Students write an aim, apparatus list, procedure, observation table, calculations, result, and inference. Post-lab discussion sessions relate experimental

TX Stream

findings to real-world engineering applications. Students maintain a laboratory record book assessed for viva, record, and observation components.

Course Outcomes (COs)

COs	Course Outcome Statement	KL
CO1	Determine the wavelength of monochromatic light, polychromatic light and specific rotation optical instruments	K3
CO2	Determine Planck's constant using photoelectric effect, study of attenuation in optical fibre and verification of Stefan's law.	K3
CO3	Determine the energy band gap and Hall coefficient of semiconductor materials.	K3
CO4	Investigate the electrical, magnetic and thermal properties of materials and to verify respective fundamental laws.	K3
CO5	Verify discrete nature of atomic energy transitions by Franck-Hertz experiment and study the switching characteristics of fundamental logic gates.	K3

TX Stream

Safety and General Instructions

1. Students must follow all laboratory safety guidelines and wear appropriate personal protective equipment (PPE).
2. Electrical experiments must be performed only after instructor approval and under supervision.
3. Handle optical instruments, lasers, and high-voltage equipment with extreme care.
4. Chemicals and solvents (where applicable) must be handled as per MSDS guidelines.
5. Equipment must be switched off and lab bench cleaned after every session.

Main Focus of the Course Outcomes

Employability	**Skill Development**	**Entrepreneurship**
✓	✓	✓

Course Objectives:

1. To identify and characterise natural and synthetic textile fibres by chemical and physical tests
2. To study polymer properties including viscosity, degree of polymerisation, and solubility
3. To perform dyeing experiments and determine dye-fibre affinity and exhaustion
4. To evaluate finishing chemicals and their effect on textile fabric properties
5. To apply green chemistry in textile processing and assess effluent quality

List of Experiments (*Any 10 Experiments*)

Exp.	**Theory Unit**	**Title**	**Description / Objective**
1	Unit I	Fibre Identification by Chemical Solubility Tests	Identify given natural and synthetic fibre samples (cotton, wool, silk, nylon, polyester, acrylic) using differential solubility in acids, alkalis, and solvents; record systematic observations
2	Unit I	Moisture Regain and Moisture Content of Fibres	Determine moisture regain and moisture content of cotton, wool, nylon, and polyester samples by oven-drying method; relate to hygroscopicity and comfort properties of fibres

TX Stream

3	Unit II	Viscosity Average Molecular Weight of Polymer	Measure viscosity of polymer solution (PVA or cellulose) at different concentrations using Ostwald viscometer; determine intrinsic viscosity [η]; compute viscosity-average molecular weight using Mark-Houwink equation
4	Unit II	Degree of Polymerisation by Viscosity Method	Determine degree of polymerisation (DP) of a cellulose or polymer sample from intrinsic viscosity; relate DP to fibre strength and processing behaviour
5	Unit III	Dyeing of Cotton with Direct Dye	Dye a cotton fabric sample with a direct dye at optimum temperature and salt concentration; measure dye exhaustion by UV-Vis spectrophotometry; calculate % exhaustion and colour strength (K/S value)
6	Unit III	Dyeing of Nylon with Acid Dye	Dye a nylon fabric with an acid dye under acidic conditions; control pH with acetic acid; measure exhaustion by UV-Vis; study effect of pH on dye uptake
7	Unit III	Effluent Analysis of Dye Bath	Analyse the exhausted dye bath effluent for BOD, COD, and colour; relate to environmental impact of textile wet processing; assess need for treatment
8	Unit IV	Softener Finish – Effect on Fabric Handle	Apply cationic softener to cotton fabric at different concentrations; evaluate handle by subjective bending test and crease recovery angle measurement; relate to softener chemistry
9	Unit IV	Water Repellency Test on Finished Fabric	Apply water-repellent finish (fluorocarbon or silicone-based) to fabric samples; evaluate water repellency by spray test (IS/AATCC method) and contact angle measurement; relate to DWR chemistry
10	Unit V	Natural Dye Extraction and Dyeing	Extract natural dye from turmeric, henna, or onion skin; mordant cotton fabric with alum; dye and assess colour strength by UV-Vis; relate to sustainable natural dyeing and green textile chemistry

TX Stream

11	Unit V	Enzymatic Scouring of Cotton (Bio-scouring Demo)	Scour cotton fabric using pectinase enzyme solution; compare whiteness, wettability, and weight loss with conventional alkali scouring; relate to enzyme-based green processing
12	Unit I	Burning Test and Melting Behaviour of Fibres	Perform burning test on natural (cotton, wool, silk) and synthetic (nylon, polyester, acrylic) fibres; observe flame behaviour, odour, and ash; correlate with fibre chemical structure and fire safety

Equipment / Chemicals Required

1. Oven and analytical balance for moisture regain
2. Ostwald viscometer with thermostat water bath
3. UV-Vis spectrophotometer
4. Dyeing beakers, thermostatic dyeing bath
5. pH meter and buffer solutions
6. Contact angle goniometer
7. Spray test apparatus (AATCC standard)
8. Crease recovery angle tester
9. COD apparatus, BOD incubator
10. Microscope for fibre observation

Teaching-Learning Methodology

Each laboratory session begins with a 10-minute pre-lab discussion connecting the experiment to the corresponding theory unit. Students record aim, principle, apparatus, chemicals, procedure, observation table, calculations, result, and inference in the laboratory record book. Post-lab discussion relates experimental findings to real-world engineering applications in the respective stream. Students maintain a laboratory record book assessed for viva, record, and day-to-day performance.

Course Outcomes (COs)

COs	Course Outcome Statement	KL
CO1	Identify textile fibres by solubility and burning tests and determine moisture regain	K3
CO2	Determine viscosity-average molecular weight and degree of polymerisation of polymer samples	K3
CO3	Perform dyeing experiments and evaluate dye exhaustion and effluent quality	K3

TX Stream

CO4	Apply softener and water-repellent finishes and evaluate fabric property changes	K3
CO5	Extract and apply natural dyes and demonstrate enzyme-based green textile processing	K3

CO-PO Articulation Matrix

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	1	3	2	–	–	–	1	–	–	1
CO2	3	3	2	3	2	–	–	–	1	–	–	1
CO3	3	3	2	3	2	1	2	1	1	–	–	1
CO4	3	2	3	3	2	1	2	1	1	–	–	1
CO5	3	2	2	3	2	2	3	2	2	1	–	2

Evaluation Pattern

Sr.	Component	Marks	Weightage
1.	Day-to-day performance (Observation, Procedure, Conduct)	20	20%
2.	Laboratory Record / File	30	30%
3.	End Semester Practical Examination (Experiment + Viva Voce)	50	50%

Suggested Textbooks / Reference Books

1. Engineering Chemistry – Jain and Jain
2. Textile Chemistry – Thomas Bechtold and Tung Pham
3. Dyes and Pigments – R. Christie

Safety and General Instructions

1. Students must wear lab coat and safety goggles at all times in the chemistry laboratory
2. Handle all acids, alkalis, and oxidising agents with extreme care; use fume hood for volatile chemicals
3. Dispose of chemical waste in designated containers as per lab safety guidelines
4. Do not pipette by mouth; use rubber bulb or mechanical pipette fillers
5. Wash hands thoroughly after every experiment; report any spillage or accident immediately

TX Stream

Course Code	**AEE151B / AEE251B**
Title of the Course	Electrical Engineering Lab
Course Category	Engineering Science Course (ESC)
Total Credits	01
NCrF Hours	30

Main Focus of the Course Outcomes

Employability	**Skill Development**	**Entrepreneurship**
✓	✓	✓

Course Objectives:

1. Verify Ohm's law and Kirchhoff's laws through simple DC circuit experiments
2. Measure AC power, power factor, and demonstrate power factor improvement for industrial loads
3. Set up three-phase circuits and measure three-phase power relevant to industrial motors
4. Study transformer efficiency and induction motor starting and performance
5. Demonstrate working of Fluorescent Lamp, electrical safety and protection equipment, and energy metering.

List of Experiments (*Any Ten Experiments*)

Exp.	**Title**	**Objective / Description with Application**
1	Electrical Safety Practices in the Laboratory	Demonstrate safe handling of electrical equipment, proper use of insulated tools, earthing, and emergency shutdown procedures. Application: Safe operation of electrical systems in laboratories and workplace
2	Verification of Ohm's Law	Verify the relationship between voltage and current for a resistor and determine its resistance..
3	Verification of KVL and KCL	Verify Kirchhoff's Voltage Law in a series circuit and Kirchhoff's Current Law in a parallel circuit

TX Stream

4	Thevenin's Theorem Verification	Find Thevenin's equivalent of a DC network; verify with different load resistors.
5	Power and Power Factor Measurement	Connect a single-phase inductive load (choke / single-phase motor); measure voltage, current, and active power using a wattmeter; compute power factor.
6	Power Factor Improvement Using Capacitor	Improve power factor of an inductive load by adding capacitors in steps; record reduction in line current.
7	Three-Phase Star Connection – Voltage and Current	Set up a balanced three-phase star resistive load; measure phase and line voltages and currents; verify the √3 relationship. Application: three-phase supply to textile machines, chemical plant drives, and construction site distribution boards.
8	Measurement of Three-Phase Power by Two-Wattmeter Method	Measure the total power of a three-phase balanced load using the two-wattmeter method.
9	No-Load Test on a Single-Phase Transformer	Measure no-load voltage, current, and input power; observe the no-load characteristics of a transformer.
10	Verification of Voltage and Current Ratio of a Single-Phase Transformer	Measure primary and secondary voltages and currents to verify the transformation ratio.
11	Starting of a Three-Phase Induction Motor Using DOL Starter	Start a three-phase induction motor using a DOL starter and observe its operation and direction of rotation.
12	Demonstration of Star-Delta Starter	Observe the starting of a three-phase induction motor using a star-delta starter and compare it with DOL starting..
13	Working of Fluorescent Lamp Circuit	Connect and observe the operation of a fluorescent lamp using a choke and starter.

TX Stream

14	Demonstration of Fuse, MCB and Earthing	Demonstrate the operation of a fuse and MCB and verify proper earthing of electrical equipment.
15	Study of Domestic Energy Meter and Energy Bill	Observe the operation of a single-phase energy meter and identify the major components of a domestic electricity bill

Equipment / Instruments Required

- DC Regulated Power Supply
- Single-Phase and Three-Phase AC Supply
- Electrical Circuit Trainer/Breadboard
- AC/DC Ammeters and Voltmeters
- Two Single-Phase Wattmeters
- Resistor Kit and Rheostat
- Capacitor Bank and Choke Coil (Inductive Load)
- Single-Phase Transformer
- Three-Phase Squirrel Cage Induction Motor
- Direct-On-Line (DOL) Starter
- Star-Delta Starter (Demonstration Setup)
- Single-Phase Energy Meter
- Fluorescent Lamp with Choke (Ballast) and Starter
- Fuse, MCB and Earthing Demonstration Kit
- Earth Continuity Tester
- Connecting Wires, Switches and Terminal Blocks
- Safety Equipment (Insulated Gloves, Safety Goggles, Fire Extinguisher and First Aid Kit)

Teaching-Learning Methodology

Each 2-hour session begins with a 10-minute pre-lab briefing linking the experiment to its theory unit and a real engineering application. Students record aim, circuit diagram, apparatus, procedure, observation table, sample calculations, result, and inference in their lab record book. A 10-minute post-lab discussion relates the experiment to emerging technologies in the stream. Continuous assessment of observation quality and conduct is maintained.

Course Outcomes (COs)

COs	Course Outcome Statement	KL
CO1	Verify Ohm's law, KVL, KCL, and Thevenin's theorem in DC circuit experiments with industrial context	K3

TX Stream

CO2	Measure AC power, power factor, and demonstrate power factor improvement for laboratory setup	K3
CO3	Set up three-phase circuits and measure power using the two-wattmeter method	K3
CO4	Evaluate transformer efficiency and demonstrate induction motor starting.	K3
CO5	Demonstrate electrical safety practices, conduct energy metering and demonstrate working of Fluorescent Lamp and protection equipment.	K2

CO-PO Articulation Matrix

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	3	1	3	3	–	–	–	1	–	–	1
CO2	3	3	2	3	3	–	1	–	1	–	–	1
CO3	3	3	2	3	3	–	1	–	1	–	–	1
CO4	3	2	2	3	3	–	1	–	1	–	–	1
CO5	3	2	1	2	3	2	2	3	1	–	–	1

Evaluation Pattern

Sr.	Component	Marks	Weightage
1.	Day-to-day performance (Observation, Circuit, Conduct)	20	20%
2.	Laboratory Record / File	30	30%
3.	End Semester Practical Examination (Experiment + Viva Voce)	50	50%

Safety Instructions

1. No circuit should be energised without the instructor's approval
2. Always switch OFF supply before making or changing any connection
3. Three-phase experiments must be performed under direct instructor supervision
4. Never exceed the rated range of any measuring instrument
5. Switch off all equipment and tidy the lab bench after every session

Back to Course Structure & Evaluation Scheme

TX Stream

Course Code	**AEC151B / AEC251B**
Title of the Course	Electronics Engineering Lab
Course Category	Engineering Science Course (ESC)
Total Credits	01
NCrF Hours	30

Main Focus of the Course Outcomes

Employability	**Skill Development**	**Entrepreneurship**
✓	✓	✓

Course Objectives:

1. Set up diode rectifier and regulated power supply for an electronic control circuit
2. Use transistor as a switch to drive relay and control a real actuator
3. Calibrate a physical sensor (temperature, light) and condition its output using an op-amp
4. Verify logic gate truth tables and understand basic digital control logic
5. Demonstrate industrial electronics — sensor-to-display chain, relay control, and an IIoT demo

List of Experiments (Any Ten Experiments)

Exp.	**Title**	**Objective / Description with Application**
1	Diode Characteristics and Rectifier	Plot forward V-I characteristic of a silicon diode; set up a full-wave bridge rectifier; observe output with and without filter capacitor. Application: DC supply for industrial sensor transmitter or PLC input module.
2	Zener Diode Voltage Regulator	Set up a Zener voltage regulator; vary supply and load; measure regulation. Application: regulated 5V / 12V supply for field instrument transmitter circuits in process plant.

TX Stream

3	BJT as a Switch – Relay Driver for Actuator Control	Use NPN BJT to drive a relay coil; connect relay to switch a lamp or motor ON/OFF using a small control signal. Application: PLC transistor output driving a solenoid valve in chemical plant or a conveyor belt relay in textile mill.
4	Optocoupler – Isolation between Control and Power Circuit	Demonstrate an optocoupler (PC817) isolating a low-voltage control signal from a higher-voltage load circuit; observe LED-phototransistor action. Application: PLC output isolation, VFD signal isolation in industrial drives.
5	Thermistor / LDR Sensor Characteristics and Bridge Circuit	Measure resistance-temperature (thermistor) or resistance-light (LDR) characteristics; set up a Wheatstone bridge; observe bridge output voltage change with sensor input. Application: temperature sensing in chemical reactor or light sensing in greenhouse.
6	Op-Amp Signal Amplifier for Sensor Output	Connect thermistor bridge output to a non-inverting op-amp amplifier (IC 741); measure amplified output voltage for different temperatures. Application: amplifying 4–20 mA sensor signal for PLC analog input in process control.
7	Op-Amp Comparator – Threshold Alarm	Set up an op-amp comparator with a sensor (thermistor or LDR) on one input and an adjustable reference on the other; observe alarm LED triggering when threshold is crossed. Application: over-temperature alarm in chemical

TX Stream

		reactor, level alarm in storage tank.
8	Logic Gate Truth Table Verification	Verify truth tables of AND, OR, NOT, NAND gates using a logic trainer; implement a simple industrial logic: Motor ON = Switch_A AND (NOT Emergency_Stop). Application: basic PLC ladder logic equivalent in discrete gate form.
9	7-Segment Display Driver – Digital Readout	Drive a 7-segment display using a BCD decoder IC (7447) and DIP switches to display digits 0–9; understand how a digital readout shows sensor data. Application: digital temperature/pressure display on process plant HMI.
10	Complete Sensor-to-Display Chain	Connect a thermistor sensor → Wheatstone bridge → op-amp amplifier → op-amp comparator (alarm) → digital display (or LED bar graph); demonstrate the full signal chain. Application: temperature monitoring and alarm system in a manufacturing plant or textile drying oven.
11	IIoT Demo – Sensor Data on Cloud Dashboard (Arduino/NodeMCU)	Connect a temperature or soil moisture sensor to a NodeMCU; display readings on serial monitor; (if Wi-Fi available) push data to a free IoT platform (ThingSpeak / Blynk). Application: remote condition monitoring of machines in Industry 4.0 factory.

Equipment / Instruments Required

1. DC regulated power supply and digital multimeters
2. Breadboard and component kit (diodes, Zener, NPN BJT, IC 741, optocoupler PC817)

TX Stream

3. Thermistor, LDR, and Wheatstone bridge setup
4. Relay (5V), indicator LED, small lamp for relay switching
5. Digital logic trainer (ICs 7408, 7432, 7404, 7400)
6. 7-segment display with BCD decoder IC 7447 and DIP switches
7. Arduino / NodeMCU + temperature or moisture sensor + USB cable
8. Laptop with Falstad Circuit Simulator / Tinkercad (browser-based, free)

Teaching-Learning Methodology

Each 2-hour session begins with a 10-minute pre-lab discussion linking the experiment to its theory concept and a real product or industry application. Students build circuits on a breadboard, take measurements, and record observations, calculations, result, and inference. Post-lab discussion highlights how the experiment relates to a real device (phone charger, PLC output, biosensor, IoT node). Simulation (Falstad/Tinkercad) is used alongside hardware wherever possible.

Course Outcomes (COs)

COs	Course Outcome Statement	KL
CO1	Set up diode rectifier and Zener voltage regulator circuits for industrial instrument supply	K3
CO2	Use BJT and optocoupler to switch relays and isolate control circuits from power circuits	K3
CO3	Calibrate sensors, set up bridge circuits, and apply op-amp amplification and comparator alarm	K3
CO4	Verify logic gate truth tables and demonstrate digital control logic and 7-segment display	K3
CO5	Demonstrate a complete sensor-to-display signal chain and an IIoT sensor monitoring demo	K3

CO-PO Articulation Matrix

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3	2	2	3	3	–	–	–	1	–	–	1
CO2	3	3	2	3	3	–	–	–	1	–	–	1
CO3	3	3	2	3	3	–	–	–	1	–	–	1
CO4	3	2	2	3	3	–	–	–	1	–	–	1
CO5	3	3	3	3	3	1	1	–	2	1	–	2

TX Stream

Evaluation Pattern

Sr.	Component	Marks	Weightage
1.	Day-to-day performance (Circuit building, Observation, Conduct)	20	20%
2.	Laboratory Record / File	30	30%
3.	End Semester Practical Examination (Experiment + Viva Voce)	50	50%

Safety Instructions

1. Always build the circuit with power OFF; energise only after instructor check
2. Do not apply voltage exceeding IC or component ratings — check datasheet
3. Handle CRO probes and signal generator outputs carefully
4. Do not connect 230V AC load directly — use relay output with instructor supervision only
5. Switch off all instruments and tidy the breadboard and bench after every session

TX Stream

Course Code	**ACE151I / ACE251I**
Title of the Course	Computer Aided Engineering Drawing Lab
Course Category	Engineering Science Course (ESC)
Total Credits	02
NCrF Hours	45

Main Focus of the Course Outcomes

Employability	**Skill Development**	**Entrepreneurship**
✓	✓	✓

Course Objectives

1. To familiarise the student with the principles, conventions and standards of engineering drawing, so that a drawing can be read and prepared without ambiguity.
2. To develop the ability to visualise a three-dimensional object and to represent it through orthographic, sectional and pictorial views.
3. To develop working competence in a CAD package for two-dimensional drafting and for basic three-dimensional modelling.
4. To develop the ability to prepare drawings of the components, systems and layouts that occur in the Textile Engineering Stream (TX), rather than generic examples.
5. To develop the ability to prepare drawings of textile machine components, fabric design diagrams and mill layouts, and to introduce textile specific CAD as used in the industry.

List of Experiments / Exercises		
Exp. No.	**Title and Brief Description**	**Hours**
1	**Drawing standards, sheet layout and the CAD environment** Sheet sizes, borders, title block, lines, lettering and dimensioning as per BIS conventions (SP 46 : 2003 (BIS) Engineering Drawing Practice for Schools and Colleges; IS 10711 (sheet sizes and layout); IS 9609 (lettering); IS 10714 (line conventions); IS 11669 (preparation of general engineering drawings); ISO 128 series.). Familiarisation with the CAD interface: coordinate entry, units, limits, object snap, layers, line types and file management.	3

TXStream

	Students set up a standard A3/A4 template with a title block that will be reused throughout the semester.	
2	**Geometric constructions and engineering curves** Construction of polygons, tangents, plain and diagonal scales; conic sections (ellipse, parabola, hyperbola) and one roulette (cycloid or involute) using CAD draw and modify commands (LINE, ARC, OFFSET, TRIM, ARRAY, MIRROR). Stream context: cam profiles of a tappet shedding mechanism, the helix of yarn twist on a package, and the cycloidal traverse of a builder motion.	3
3	**Orthographic projection of points and straight lines** Projections of points in the four quadrants; projections of lines inclined to one and both reference planes; true length and true inclination by rotation/trapezoidal method. Principal planes handled on separate CAD layers.	3
4	**Orthographic projection of planes and simple solids** First angle projection of planes and of prisms, pyramids, cylinders and cones resting in given positions; front, top and side views. Third angle convention introduced for comparison, since it is common in imported drawings.	3
5	**Sections of solids and true shape of section** Solids cut by section planes perpendicular to one reference plane and inclined to the other; sectional views, cutting plane line, hatching conventions and true shape of the section obtained by auxiliary projection.	3
6	**Development of lateral surfaces** Parallel line and radial line development of cube, prism, cylinder, cone and truncated solids. Stream context: development of a cone/cheese package surface, a conical funnel of a fibre transport duct and a sheet metal machine guard.	3
7	**Isometric projection and reading of orthographic views** Isometric scale, isometric axes and isometric drawing aids in CAD; conversion of given orthographic views into an isometric view, and the reverse exercise of reading a pictorial view and producing orthographic views. Missing line and missing view problems for visualisation practice.	3
8	**Drawing of a textile machine component** Orthographic and sectional drawing of a machine part, a ring frame spindle with bolster and wharve, a heald and reed section, a shuttle, a tappet/cam profile or a drafting roller with its bearing. The cam profile is plotted from the	4

TX Stream

	displacement diagram rather than copied, so that the link between motion requirement and geometry is visible.	
9	**Weave design: point paper design, draft and peg plan** Preparation of point paper (design paper) representations of plain, twill, satin/sateen and a simple derivative weave, together with the corresponding drafting plan and peg/lifting plan, drawn on a CAD grid using ARRAY and layer control; cross sectional views of the fabric structure along warp and weft. A colour and weave effect is produced for one design.	4
10	**3D modelling of a textile component** Solid model of a component such as a bobbin, cone, cot/apron roller or a package holder arm, using revolve/extrude/sweep features; automatic generation of orthographic and sectional views from the model.	4
11	**Garment pattern block, mill layout, sheet composition and plotting** Drafting of a basic bodice/sleeve block to given measurements with grain lines, notches and seam allowances; and a machine layout plan of a spinning or weaving shed showing machine positions, passages, material flow and clearances. Composition of a complete sheet with title block; plotting to scale and export to PDF/DXF.	3
12	**Mini project with an introduction to textile CAD/CAM and AI tools** In groups of two or three, students deliver either a machine component drawing set (detail plus assembly, with 3D model) or a design set (weave/print design with fabric cross sections and a pattern block). The session includes a demonstration of jacquard/dobby design software, digital printing workflows, 3D garment simulation, and AI assisted print/weave design generation and defect detection. Evaluation by presentation and viva voce.	6
	Internal assessment, viva voce and end semester practical examination	**03**
	Total	**45**

Teaching–Learning Methodology
Each weekly session begins with a short tutorial (1 hour) on the drawing principle or standard involved, followed by two hours of hands-on CAD work at the terminal. Experiments 1 to 7 build the common

TX Stream

graphics foundation. Experiments 8 to 12 are specific to the Textile Engineering Stream (TX) and are conducted by, or in consultation with, the parent department. Every student maintains a CAD drawing portfolio (soft copy plus a plotted file) which is submitted for internal assessment. Sheets are checked for correctness of projection and for conformity to standards a geometrically correct but non-conforming drawing is returned for correction. The mini project of Experiment 12 is done in groups of two or three and is defended individually in a viva voce.

Course Outcomes (COs)

CO	Course Outcome Statement	KL
CO1	Apply engineering drawing standards and conventions (BIS/ISO) while setting up and dimensioning a drawing.	3
CO2	Construct orthographic and sectional views of points, lines, planes and solids using a CAD package.	3
CO3	Develop surfaces and isometric views of solids, read given views to visualise the object, and apply this to draw textile machine components, weave-design diagrams and mill layouts.	3
CO4	Create three-dimensional models in CAD, derive two-dimensional views from them, and exchange drawing data in standard formats.	3
CO5	Compose, plot and defend a complete stream specific drawing set through a mini project, using contemporary CAD practice and emerging parametric/AI assisted tools.	6

CO-PO Articulation Matrix

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

Course Context: This is a Project-Based Learning (PBL) course aligned with the AICTE model curriculum on Design Thinking & Innovation. Students work in teams through the complete Design Thinking cycle — Empathize, Define, Ideate, Prototype, Test — to solve a real-world problem. The emphasis is on doing, not lecturing: every session is a workshop or studio activity. The course builds creativity, teamwork, problem-solving, and an entrepreneurial mindset in first-year students of all branches.

Course Code	**AID151/AID251**
Title of the Course	Innovation & Design Thinking Lab (Project-Based Learning)
Course Category	Skill Development Course (SDC)
Total Credits	02
NCrF Hours	45
Mode	Studio / Workshop — Team-based Project Learning

Main Focus of the Course Outcomes

Employability	**Skill Development**	**Entrepreneurship**
✓	✓	✓

Course Objectives:

1. To introduce students to the Design Thinking process as a human-centred approach to problem solving
2. To develop empathy and the ability to identify real user needs and define meaningful problems
3. To build creative ideation, brainstorming, and lateral-thinking skills
4. To enable students to build low-cost prototypes and test them with users
5. To foster teamwork, communication, and an innovation and entrepreneurial mindset through a hands-on team project

Course Content — Design Thinking Modules (AICTE Aligned)

Module	**Description**	**Hours**

TX Stream

1.	**Module 1 – Introduction to Design Thinking & Innovation:** What is Design Thinking; difference between design thinking and conventional problem solving; the five stages (Empathize, Define, Ideate, Prototype, Test); innovation vs invention; examples of design thinking success stories (Apple, Airbnb, IDEO, Indian startups); creativity and the innovation mindset; introduction to the team project.	6 hrs
2.	**Module 2 – Empathize: Understanding the User:** Human-centred design; observation and user research techniques; conducting interviews and surveys; empathy mapping; identifying user needs, pain points, and latent needs; stakeholder analysis; developing personas. Studio Activity: field observation and user interviews for the chosen problem.	8 hrs
3.	**Module 3 – Define & Ideate:** Synthesising research; framing the problem statement (Point of View); 'How Might We' questions; brainstorming rules and techniques; SCAMPER, mind mapping, lateral thinking; idea selection and prioritisation (impact-effort matrix, dot voting); concept development. Studio Activity: define problem statement and generate/short-list solution ideas.	10 hrs
4.	**Module 4 – Prototype:** Purpose of prototyping; types of prototypes (paper, low-fidelity, working model, digital mock-up); rapid prototyping with low-cost materials; storyboarding; introduction to prototyping tools (cardboard, clay, 3D printing basics, Tinkercad, Figma/Canva for digital prototypes). Studio Activity: build a low-cost prototype of the team's solution.	12 hrs
5.	**Module 5 – Test, Iterate & Pitch:** User testing and feedback collection; iteration and refinement based on feedback; failure as learning; introduction to business model canvas (basic);	9 hrs

TX Stream

	value proposition; storytelling and pitching; preparing and delivering the final project pitch. Studio Activity: test prototype with users, iterate, and present the final pitch.	

Course Outcomes (COs)

COs	Course Outcome Statement	KL
CO1	Explain the design thinking process and apply the innovation mindset to real problems	K2
CO2	Apply empathy tools (interviews, observation, empathy maps) to identify genuine user needs	K3
CO3	Define a clear problem statement and generate creative solutions through structured ideation	K3
CO4	Build a low-cost prototype of a proposed solution using appropriate tools	K3
CO5	Test and iterate the prototype based on user feedback and pitch the solution effectively as a team	K4

CO-PO Articulation Matrix

CO1	2	2	2	–	1	1	–	1	1	1	–	3
CO2	1	3	2	2	2	2	–	2	2	2	–	2
CO3	2	3	3	2	2	2	1	2	2	2	1	2
CO4	2	2	3	3	3	1	1	1	2	1	2	2
CO5	2	3	3	3	2	2	1	2	3	3	2	3

Evaluation Pattern

Sr.	Component	Marks	Weightage
1.	Internal Assessment (IA) — Stage-wise deliverables (Empathy report, Problem statement, Ideation, Prototype), Team-work, Design journal / portfolio	50	50%
2.	External Assessment (EA) — Final prototype demonstration + Project pitch + Viva Voce (by external examiner)	50	50%

TX Stream

Internal Assessment — Detailed Rubric (50 Marks)

Component	Deliverable	Marks
Empathize Stage	User research + empathy map + personas	10
Define Stage	Problem statement (POV) + How-Might-We	8
Ideate Stage	Brainstorm record + short-listed concept	8
Prototype Stage	Low-cost working prototype / model	12
Design Journal	Team logbook / portfolio of the whole process	7
Team Participation	Individual contribution + collaboration	5

Suggested Project Themes (Teams may choose or propose their own)

1. Campus & Community — waste management, water conservation, accessibility for the differently-abled, canteen queue management
2. Agriculture & Rural — low-cost farming tools, water-saving irrigation, crop storage, farmer information access
3. Health & Wellbeing — elderly care aids, hygiene solutions, mental wellness, first-aid tools
4. Sustainability & Environment — plastic reduction, energy saving, green mobility, air-quality awareness
5. Education & Skilling — learning aids, tools for rural schools, assistive learning for disabilities
6. Smart Living — affordable home automation, safety devices, smart utilities

Suggested Learning Resources

1. AICTE Model Curriculum – Design Thinking (aicte-india.org)
2. The Design of Everyday Things – Don Norman
3. Change by Design – Tim Brown (IDEO)
4. Design Thinking Bootleg – Stanford d.school (dschool.stanford.edu, free)
5. IBM Enterprise Design Thinking – ibm.com/design/thinking (free)
6. NPTEL – Design Thinking: A Primer (IIT Madras)

Back to Course Structure & Evaluation Scheme

TX Stream

Course Code	**AAS153 / AAS253**
Title of the Course	Language Lab
Course Category	Applied Science & Humanities (AS&H)
Total Credits	Non-Credit
NCrF Hours	30

Main Focus of the Course Outcomes

Employability	**Skill Development**	**Entrepreneurship**
✓	✓	

Course Objectives

1. Develop proficiency in Listening, Speaking, Reading and Writing (LSRW) skills for academic, professional and workplace communication.
2. Build confidence in spoken English through interactive, collaborative and technology-enabled learning.
3. Strengthen pronunciation, fluency, vocabulary, grammar and presentation skills using digital language learning tools.
4. Develop professional communication skills required for interviews, group discussions, presentations, meetings and workplace interactions.
5. Enhance employability, critical thinking, leadership, teamwork and ethical communication through experiential learning and AI-assisted language practice

Unit	**Description**
1	**Part I: Interactive Communication Skills Lab** The laboratory shall provide experiential learning through role plays, simulations, presentations, discussions and workplace communication activities. **List of Practical Activities** 1. Self-Introduction, Video Introduction, and SWOT Analysis 2. Professional Networking and Digital Professional Branding (LinkedIn, X, or Professional Blogs) 3. Business Communication: Email, Notice, Agenda, Minutes of Meeting, and Technical Report Writing 4. Group Discussion (Case-based, Panel Discussion, and Turn-taking Techniques) 5. Role Play on Workplace Communication, Professional Etiquette, Negotiation, and Conflict Resolution

TX Stream

	6. Mock Interview (HR, Technical, Behavioral, and Situational Interviews) 7. Extempore Speech, Just A Minute (JAM), and Elevator Pitch 8. Technical and AI-assisted Presentation with Ethical Use of AI 9. Non-verbal Communication: Body Language (Kinesics), Eye Contact, Gestures, Proxemics, Facial Expressions, and Voice Modulation 10. Listening and Phonetics: IPA Basics, Pronunciation, Stress, Intonation, Accent Neutralization, and Audio-Video Comprehension using language learning software 11. Critical Thinking through Case Studies, Debate, Storytelling, and Collaborative Problem-solving 12. Professional Digital Portfolio: Résumé, Cover Letter, Video Portfolio and Career Portfolio
2	**Part II: Computer-Assisted Language Learning** Students shall complete self-paced software-based language* learning modules aligned with **CEFR (Target Level: B2)** to enhance employability and workplace communication. **Suggested Modules** • Grammar and Vocabulary • Listening and Reading Comprehension • Pronunciation, Phonetics, Stress, and Intonation • Spoken English and Fluency • Business Communication and Email Writing • Interview Preparation and Presentation Skills **Suggested Tools** • Praat : https://www.fon.hum.uva.nl/praat/ • BBC Learning English : https://www.bbc.co.uk/learningenglish • Sounds of Speech : http://soundsofspeech.uiowa.edu/ • British Council Learn English : https://learnenglish.britishcouncil.org/ • Forvo : https://forvo.com/ • Mozilla Common Voice : https://commonvoice.mozilla.org/en • British council: English score app (Google play store) ***Note**: The institute may use any software that meets the suggested modules criteria, depending on its availability.

Course Outcomes

COs	Course Outcome Statement	KL
CO1	Demonstrate effective Listening, Speaking, Reading and Writing (LSRW) skills for academic, professional and workplace communication.	K3

TX Stream

CO2	Apply appropriate verbal and non-verbal communication skills in presentations, group discussions, interviews and workplace interactions.	K3
CO3	Use correct pronunciation, grammar, vocabulary and digital language learning tools to improve fluency and communication effectiveness.	K3
CO4	Analyse professional communication situations and prepare effective reports, presentations and formal workplace documents using appropriate communication strategies.	K4
CO5	Demonstrate employability skills, teamwork, leadership, ethical communication and AI-assisted communication practices in professional environments.	K3

CO-PO Articulation Matrix

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	1	1	–	–	2	–	–	–	2	3	–	1
CO2	1	2	1	–	2	1	–	2	3	3	1	1
CO3	1	2	–	–	3	–	–	1	2	3	–	2
CO4	1	3	2	1	2	1	–	2	2	3	1	2
CO5	1	2	2	–	3	2	1	3	3	3	2	3

Evaluation Pattern		
Sr. No.	**Details of the Evaluation**	**Weightage**
1	Internal Assessment (PS): continuous evaluation of experiment performance, the portfolio/lab record, mini project and viva voce, and attendance	50 %
2	End Semester Practical Examination (PE)	50 %

Back to Course Structure & Evaluation Scheme

TX Stream

Course Code	**AAC101 / AAC201**
Title of the Course	Environment & Sustainability
Course Category	Mandatory Non-Credit / Audit Course (AU)
Teaching Load (L-T-P)	2 – 0 – 0
Credits	00 (Non-Credit)

Course Objectives:

1. To create awareness about the environment, natural resources, and ecological balance
2. To understand the causes, effects, and control of environmental pollution
3. To understand the concept of sustainable development and the UN Sustainable Development Goals (SDGs)
4. To understand climate change, renewable energy, and the engineer's role in sustainability
5. To encourage students to adopt simple sustainable practices and environmental responsibility

Course Content

Unit	**Description**	**Hours**
1.	**Environment and Ecosystems:** Environment — definition, components (atmosphere, hydrosphere, lithosphere, biosphere); ecosystem — structure and function; food chain, food web, energy flow (basic concept); biodiversity — meaning, importance, and threats; need for conservation. Awareness focus: local ecosystems and why they matter.	6 hrs
2.	**Natural Resources and their Conservation:** Renewable and non-renewable resources; water resources — scarcity and conservation; forest and land resources; energy resources (brief); over-exploitation of resources; the concept of the 3 R's — Reduce, Reuse, Recycle; rainwater harvesting (concept). Awareness focus: simple resource-saving practices in daily life.	6 hrs
3.	**Environmental Pollution:** Air pollution — causes, effects, control (basic); water pollution — sources, effects, prevention; soil pollution; noise pollution; solid waste management — segregation, composting, recycling; e-waste and plastic waste (awareness). Awareness focus:	6 hrs

TX Stream

	pollution in the student's own city/campus and how to reduce it.	
4.	**Climate Change and Sustainable Development:** Global warming and greenhouse effect (simple explanation); climate change — causes and impacts; carbon footprint (concept + how to reduce); sustainable development — definition and need; UN Sustainable Development Goals (SDGs) — overview of the 17 goals; renewable energy — solar, wind, biomass (awareness level). Awareness focus: calculating and reducing one's own carbon footprint.	6 hrs
5.	**Environmental Protection, Law and the Role of Engineers:** Environmental protection measures; brief overview of environmental laws in India (Environment Protection Act, Water Act, Air Act — awareness only, no legal detail); role of individuals, society, and technology in environmental protection; green campus and green buildings (concept); role of engineers in sustainable design and clean technology; environmental ethics. Awareness focus: how each engineering branch can contribute to sustainability.	6 hrs

Suggested Field / Awareness Activities (any one to be completed)

1. Visit a nearby lake, river, park, or forest and prepare a short observation report
2. Conduct a waste segregation / plastic-free drive on campus and document it
3. Prepare a poster or short video on an environmental issue (water, air, plastic, climate)
4. Calculate your household or personal carbon footprint and suggest ways to reduce it
5. Plant and maintain a sapling; document its growth over the semester (Green initiative)
6. Survey energy or water use in a hostel/department and suggest saving measures

Course Outcomes (COs)

COs	Course Outcome Statement	KL
CO1	Explain the components of environment and ecosystems and the importance of biodiversity	K2
CO2	Describe natural resources and identify practical measures for their conservation	K2

TX-Stream

CO3	Explain the causes and control of environmental pollution and waste	K2
CO4	Explain climate change, carbon footprint, and the UN Sustainable Development Goals	K2
CO5	Identify the role of engineers and individuals in environmental protection and sustainability	K2

Co-PO Articulation Matrix

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	2	1	–	–	1	1	3	1	–	–	–	1
CO2	2	2	1	–	1	2	3	1	–	–	–	1
CO3	2	2	1	1	1	2	3	2	–	–	–	1
CO4	2	2	1	1	1	2	3	2	–	–	–	2
CO5	2	2	2	–	1	3	3	3	1	1	–	2

Evaluation Pattern

Sr.	Component	Weightage
1.	Assignment / Quiz / Class Test (awareness-based), Attendance and class participation	30%
2.	End Semester Examination (ESE)	70%

Suggested Learning Resources

1. Textbook of Environmental Studies for Undergraduate Courses – Erach Bharucha (UGC recommended)
2. Environmental Studies – Anindita Basak (Pearson)
3. Environmental Science – Y.K. Singh
4. UN Sustainable Development Goals – sdgs.un.org (free, official)
5. NPTEL – Environmental Studies / Sustainability courses (free video lectures)
6. Ministry of Environment, Forest & Climate Change (MoEFCC), Govt. of India – moef.gov.in

STANDARD OPERATING PROCEDURE (SoP)

Innovation & Design Thinking Lab (AID151/AID251) — Conduct Guidelines

Purpose: This SoP provides a standard, uniform procedure for conducting the Innovation & Design Thinking Lab across all departments, ensuring consistent delivery, fair assessment, and achievement of course outcomes in line with the AICTE Design Thinking framework.

1. Team Formation

1. Students are organised into teams of 4–5 members at the start of the semester.
2. Teams should be interdisciplinary/mixed wherever possible to encourage diverse thinking.
3. Each team elects a Team Lead (role rotates across project stages so every member leads once).
4. Each team maintains a shared Design Journal (physical logbook or digital document) from Day 1.

2. Weekly Session Structure (1 hr Tutorial + 2 hrs Studio)

1. Tutorial hour: instructor introduces the design-thinking concept/tool for the week with examples.
2. Studio hours (2 hrs): teams apply the tool to their own project under faculty facilitation.
3. The faculty acts as a facilitator/mentor, NOT a lecturer — guiding, questioning, and unblocking teams.
4. Every session ends with a 5-minute stand-up where each team states progress and next steps.
5. All work (notes, sketches, photos) is recorded in the team Design Journal the same day.

3. Stage-Gate Milestones (Aligned to 5 Design Thinking Stages)

Week	Design Thinking Stage	Deliverable / Gate
1–2	**Introduction + Team formation**	Team formed, problem area chosen, project charter
3–5	**Empathize**	User research, interviews, empathy map, personas

TX Stream

6–7	**Define**	Refined problem statement (POV) + How-Might-We questions
8–9	**Ideate**	Brainstorm record, shortlisted concept, concept sketch
10–12	**Prototype**	Low-cost working prototype / model built
13–14	**Test & Iterate**	User testing feedback + at least one iteration
15	**Pitch**	Final pitch, prototype demo, design journal submission

4. Role of Faculty Facilitator

1. Facilitate, do not dictate — let teams discover solutions themselves.
2. Ensure every team member participates; prevent free-riding through individual check-ins.
3. Provide timely feedback at each stage-gate before allowing progress to the next stage.
4. Arrange access to basic prototyping materials and tools (see Section 6).
5. Maintain a facilitation log recording each team's progress and individual contributions.
6. Invite an industry expert / entrepreneur / senior alumnus for the final pitch wherever possible.

5. Assessment Procedure

1. Internal Assessment (50 marks) is continuous and stage-wise, per the IA rubric in the syllabus.
2. Each stage-gate deliverable is assessed and recorded before the team proceeds.
3. Individual marks may vary within a team based on documented individual contribution.
4. External Assessment (50 marks) is conducted at semester end: final prototype demo + pitch + viva by an external examiner.
5. A team that has not cleared at least the Prototype stage-gate is not eligible for the final external assessment.
6. Design Journal is mandatory for both IA and EA — teams without a journal cannot be assessed.

6. Required Infrastructure & Materials

1. Design studio / open classroom with movable furniture for team work.
2. Whiteboards / chart paper, sticky notes (Post-its), markers, sketch pens.

TX Stream

3. Basic prototyping materials: cardboard, chart paper, glue, scissors, clay, thermocol, tape, craft materials.
4. Access to a computer lab with free tools — Tinkercad, Canva, Figma, Google Workspace.
5. Access (shared) to a 3D printer / maker-space / tinkering lab where available (ATL/IIC).
6. Projector / smart board for pitches and concept sharing.

7. Safety, Ethics & Academic Integrity

1. Students must handle tools (cutters, glue guns, 3D printers) safely and under supervision.
2. User research must be respectful; informed consent must be taken for interviews and photographs.
3. Projects must be original team work; plagiarism of existing products without acknowledgement is not permitted.
4. Teams are encouraged to consider social impact, inclusivity, and sustainability in their solutions.
5. Any promising innovation may be forwarded to the Institution's Innovation Council (IIC) / incubation cell for further support.

8. Documentation & Records to be Maintained

1. Team-wise Design Journal / Portfolio (empathy maps, sketches, photos, test notes).
2. Faculty facilitation log (per team, per session).
3. Stage-gate assessment sheets with marks.
4. Final project report (short) + pitch deck + prototype photographs.
5. Course file: syllabus, SOP, CO-PO mapping, sample deliverables, and result analysis.

Note: *This SOP is aligned with the AICTE model curriculum on Design Thinking & Innovation and the objectives of the Institution's Innovation Council (IIC) under the Ministry of Education's Innovation Cell. Departments may adapt studio scheduling to local timetable while retaining the five-stage design-thinking flow and stage-gate assessment.*

STANDARD OPERATING PROCEDURE (SoP) for General Proficiency

1. Title

Standard Operating Procedure (SoP) for implementation of **General Proficiency**

2. Objective

1. To promote **holistic development** of students beyond academic learning
2. To inculcate **discipline, ethical values, and social responsibility**
3. To enhance **communication, leadership, and teamwork skills**
4. To align student development with the vision of **NEP 2020**
5. To prepare students for **professional and societal challenges**

3. Scope

This SoP shall be applicable to:

- All **undergraduate (B.Tech) students**
- All **affiliated and constituent institutions** of the University
- All semesters (or as notified by the University)

4. Course Structure

Parameter	Details
Course Name	General Proficiency
Marks	50
Credits	Non-Credit
Nature	Mandatory
Type	Internal Assessment (Non-Theory)

5. Components of Assessment

Category	Marks	Key Evaluation Parameters
Discipline & Ethics	10	Attendance, punctuality, adherence to rules, respect for faculty and peers, ethical behavior
Communication & Leadership Skills	10	Language proficiency, confidence, presentation skills, leadership, problem-solving
Co-curricular Activities	10	Participation in debates, seminars, sports, cultural events, social service

TX Stream

Teamwork & Collaboration	10	Group participation, coordination, cooperation, helping attitude
Professional & Technical Skills	10	Practical knowledge, digital literacy, innovation, creativity

6. Evaluation Process

- Evaluation shall be conducted **semester-wise**
- Assessment shall be based on:
  - ✓ Continuous observation by faculty
  - ✓ Participation in activities
  - ✓ Performance in institutional and external events
- Students may be given opportunity for:
  - ✓ **Self-assessment**
  - ✓ **Faculty assessment**

7. Implementation Mechanism

- Each department shall nominate a **Faculty Coordinator**
- A **Proficiency Assessment Committee** may be constituted at institute level
- Records shall be maintained in:
  - ✓ Digital format
  - ✓ Activity log / portfolio of students

8. Documentation & Record Keeping

- Students shall maintain:
  - ✓ Participation certificates
  - ✓ Activity reports
  - ✓ Portfolio of achievements
- Institutes shall maintain:
  - ✓ Attendance and evaluation records
  - ✓ Consolidated marks sheet

9. Grading & Reporting

- Marks shall be awarded out of **50**

TX Stream

- The score shall be:

  - ✓ Reflected in **Grade Card**
  - ✓ Considered for **overall student evaluation (non-SGPA component, if applicable)**

10. Alignment with NEP 2020

The course aligns with:

- **Holistic Development (Para 4.4)**
- **Co-curricular Integration (Para 4.8)**
- **Ethics & Value-based Education (Para 4.27)**
- **Life Skills & Multidisciplinary Learning (Para 11.5)**
- **Student Well-being (Para 4.42)**

11. Expected Outcomes

Students will be able to:

- Demonstrate **discipline and ethical behavior**
- Exhibit **effective communication and leadership skills**
- Participate actively in **co-curricular and social activities**
- Work effectively in **teams**
- Apply **technical and professional skills in real-life situations**

12. Review and Monitoring

- Periodic review shall be conducted by:

  - ✓ **Departmental Committee**
  - ✓ **Academic Council (if required)**

- Feedback from students and faculty shall be considered for improvement

Back to Course Structure & Evaluation Scheme

TX Stream

STANDARD OPERATING PROCEDURE (SoP) for Academic Activity Points (AICTE Activity Point Programme)

1. Title

Standard Operating Procedure (SoP) for implementation of **Academic Activity Points for Award of Degree**

2. Objective

- To promote **holistic development** of students beyond academics
- To encourage **community engagement, innovation, and social responsibility**
- To develop **leadership, teamwork, and entrepreneurial skills**
- To align with **AICTE guidelines and NEP 2020**

3. Scope

This SoP shall be applicable to:

- All **B.Tech students**
- All **affiliated and constituent colleges**
- Students admitted under **regular, lateral entry, and transfer categories**

4. Activity Points Requirement

Student Category	Minimum Activity Points
Regular Students (4-Year Programme)	100
Lateral Entry Students	75
Transferred Students	50

5. Nature of Activity Points

- **Mandatory for award of degree**
- **Non-credit** (not counted in SGPA/CGPA)
- Reflected in **final semester grade card**

6. Activity Categories and Approved Activities

Activity Summary Table

Sl. No.	Activity Head	Minimum Duration (Weeks)	Hours	Maximum Points	Evaluated By

TX Stream

				per Activity	
1	Helping local schools to improve results and enhance enrolment	2	80–90	20	Coordinator NSS / Youth Red Cross/ College Internal Compliant Committee / Mentor
2	Preparing business proposal for village income enhancement	2	80–90	20	Same
3	Sustainable water management system development	2	80–90	20	Same
4	Tourism promotion initiatives	2	80–90	20	Same
5	Promotion of appropriate technologies	2	80–90	20	Same
6	Energy conservation initiatives	2	80–90	20	Same
7	Skill development for rural population	2	80–90	20	Same
8	Digital financial inclusion initiatives	2	80–90	20	Same
9	Women empowerment awareness programmes	2	80–90	20	Same
10	Waste management system development	2	80–90	20	Same
11	Marketing support for rural produce	2	80–90	20	Same
12	Food preservation and packaging	2	80–90	20	Same
13	Automation of local activities	2	80–90	20	Same

TX Stream

14	Rural awareness programmes	2	80–90	20	Same
15	Participation in national initiatives (Swachh Bharat etc.)	2	80–90	20	Same
16	Rainwater harvesting awareness programmes	2	80–90	20	Same

7. Activity Duration and Completion

- Minimum duration per activity: **2 weeks**
- Minimum engagement: **80–90 hours**
- Activities can be completed during:

  - ✓ Weekends
  - ✓ Vacations
  - ✓ Semester breaks

8. Evaluation Mechanism

- Evaluation shall be carried out by:

  - ✓ Faculty Mentor
  - ✓ NSS / Activity Coordinator
  - ✓ Institutional Committee

- Assessment criteria:

  - ✓ Participation
  - ✓ Quality of work
  - ✓ Impact and outcomes

9. Implementation Framework

- Each institute shall appoint:

  - ✓ **Activity Point Coordinator**
  - ✓ **Monitoring Committee**

- Responsibilities:

  - ✓ Approve activities

TX Stream

- ✓ Monitor student progress
- ✓ Validate submitted documents

10. Documentation Requirements

Students must maintain:

- Activity reports
- Certificates
- Proof of participation (photos/videos)
- Mentor verification

Institutes must maintain:

- Student-wise records
- Consolidated activity reports

11. Submission and Reporting

- Institutes shall submit **consolidated reports to the University**
- Activity points shall be verified before **final semester completion**
- Points shall be reflected in the **Grade Card**

12. Compliance Requirement

- Earning required Activity Points is **mandatory for award of degree**
- In case of non-compliance:
  - ✓ **Degree shall not be awarded**
  - ✓ Final Grade Card may be withheld

13. Monitoring and Review

- Periodic review at:
  - ✓ Department level
  - ✓ Institute level
- University may conduct:
  - ✓ Audits
  - ✓ Compliance checks

14. Expected Outcomes

TX Stream

Students will:

- Develop **social responsibility and ethical values**
- Gain **practical exposure and real-world experience**
- Improve **leadership and teamwork skills**
- Enhance **employability and innovation capability**

15. Alignment with NEP 2020

- Holistic and multidisciplinary education
- Skill-based and experiential learning
- Community engagement
- Value-based education
